I hope the Shadow Spirit's battery is heavier than the unit in the CBF1000.

Anyway start developing your "dead battery bike pushing" skills...

> to the antenna.

If this belief were true then the long-distance coverage possible for some MW broadcast stations would have to be made using more than a single reflection from the ionosphere. Yet the texts of Terman (http://i62.photobucket.com/albums/h85/rfry-100/TermanFig55.jpg) and Laport (http://i62.photobucket.com/albums/h85/rfry-100/LaportFig23.jpg) show that such coverage is possible from single-hop skywave radiated at elevation angles of just a few degrees.

And as this is true for MW broadcast monopoles, it is equally true for the HF monopoles used by amateurs.

> Sorry, I interpreted your postings to state that the surface wave was an
> important factor to consider in determining the strength of the field
> from a vertical for working skip communication. If that's not what you
> meant, then exactly what is the point you were trying to make regarding
> the importance of considering the surface wave for amateur communication?

Again, I do not, and never have considered the surface wave to be important in skywave communications. The reason I referred to it was to show that if it exists with substantial relative field close to the radiator, then so does substantial radiation exist there at low elevation angles, and which can serve the most distance ranges using a single reflection from the ionosphere.

I haven't really given this much thought, but seems to me the
low angle radiation that does reach the ionosphere and would
be useful for very long ranges would be considered the lower angles
of the space wave, and would be separate from the ground or surface
wave, whichever you would want to call it.. I tend to use "ground
wave",
but I've always considered it separate from the "space wave" as
I call it..
As a difference between the two, the ground wave would follow the
curvature of the earth, but the lowest angles of the space wave would
not. They would continue at the original angle, which naturally would
lead them to the ionosphere eventually. At low angles too if
measured from the transmitter location.
Anyway, seems to me almost all radiation that strikes the
ionosphere at low angles would be from the space wave, not the
ground wave.
I dunno if this makes any sense or is totally correct.. MPG will
vary..

I totally agree. That is the point I have been trying to make:
radiation from low elevation angles is not attenuated virtually to
zero before it reaches the ionosphere.

I'm completely confused about the point you were trying to make. You called NEC results "misleading" when showing only "far field" (sky wave, without surface wave) results, and implied that the surface wave must be considered when determining skip performance. Are you now agreeing that it correctly shows the amount of radiation at low angles which is capable of reaching the ionosphere? If so, what's misleading about it? Or are you saying that the field strength capable of reaching the ionosphere at low angles is greater than NEC "far field" (sky wave) analysis reports? And if so, how much greater and why?

Yes, that's correct. And NEC (and EZNEC) correctly show this low angle sky wave radiation in their "far field" (sky wave only) analysis. The surface wave isn't of much interest to anyone except AM broadcasters, except perhaps some amateurs interested in local (a few tens of miles) ground wave communication on 160 meters.

I havent bought any in a long time but the local drug store used to sell mineral oil by the gallon. The gallon I bought was about $12 USD about 20 years ago. Lately I havent seen anything larger than a quart.My wife has a 12 oz bottle she picked up at the dollar store for $.97, that may be a good way to go. I know a guy that used "Marvel Mystery Oil" which is mostly mineral oil. He says the can will rust out will regular mineral oil but not with the MMO.

No, I did not write that the surface wave must be considered when determining skywave performance. Your understanding of what I posted is incorrect. Please re-read what I posted previously, and quote us any of my text that you believe supports your present conclusion about this.

Do you reject the data in the Terman and Laport plots I linked to showing that the most distant, single-hop skywave coverage over a real, curved earth originates from space wave radiation at very low elevation angles (less than 5 degrees above the horizontal plane at the transmit antenna site)?

> Are you now agreeing that it (far-field NEC) correctly shows the

Absolutely not, and I am rather surprised that, apparently, you believe and support this concept.

I was just happy to see someone in that thread pop up with the warning about
PCBs in old transformer oil. I couldn't believe someone said they actually
got power company transformer oil!

Transformer oil.

Try your local power company. typically they will either sell it to you, or, sometimes when they find out that you only need a gallon or so, they'll just give it to you. Mine did.

Nothing wrong with PoCo oil. They havent used PCBs in years. We use
the same stuff at work made by Shell . Its just mineral oil with a few
additives.

Actually, I don't know why anyone would use or suggest the use of
anything but silicone.

You can tear the case off your TV/radio, sit the chassis down in an
aquarium full of the stuff, turn it on and watch it! Pull it out,
remove the silicone, put it back in its' case and expect it to go to
live expectancy, or beyond ...

Try that with anything else ...

> manner?
A random wire receiving antenna is quite non-critical.
It possible to get adequate coupling by pasting aluminum
foil on both sides of a glass window. If you want to
calulate the capacitance the approximate formula is quite
simple:

C = 0.224 KA/d (n-1)

Where

C is capacitance in uuf
K is dielectric constant of the material. For window glass
this is about 8.0
A is the area of _one_ plate in inches squared
d is the separation between the plates un inches.
n is the number of plates.

Typical window glass is about 1/8th inch thick.

For a 10 inch square on both sides (it can be round if
you prefer) the capacitance is about 22.5 uuf, for a 15"
square its about .003 uf, the capacitance increases with the
area so it goes up pretty fast as the linear dimensions are
increased.

A foot square should give you enough coupling for an
all-wave antenna. Remember than singnal strength at
broadcast frequencies is likly to be high so a smaller cap
may be an advantage.
You definitely do NOT need copper plate, plain aluminum
wrap will do nicely. It can be pasted on the glass with
spray adhesive but keep in mind that you probably will want
to remove it some day so peel off adhesive might be a good
idea. This can be obtained in art supply or photographic
supply places. If you are in an area where the outside is

subjected to bad weather, for instance, very cold
temperatures or a lot of moisture, you might need to use a
more permanent adhesive.
You can fasten the wires to the aluminum with an
aligator clip on either side. Leave an un-cemented strip for
this.
Of course, the wire should have some sort of strain
relief since it will just tear off the aluminum foil.
For transmitting one can use a similar trick but its
not so simple.

< snip >

I bought a "Midband Trap" from a TV
> shop downtown which fixed things. It went inline and attenuated those
> non-TV signals between (approx) 120 - 170 MHz.

I have good and bad news to add:

Last night I built some stubs with TV coax and BNC T-connectors. I swept them with a spec-an/tracking-generator. I could produce a nice 2m notch with one stub and (by careful trimming) a nice bandstop filter with two stubs, separated by an intermediate length of cable. There was some ripple in the passband, probably due to impedance discontinuities. That's the good news.

The bad news is that there was also loss at freqs for UHF channels 14, 15 & 16, as well as Channels 45 and up. (If your building had separate antennas for VHF and UHF, this effect could probably be avoided. You trap the VHF antenna cable, then join the separate U/V antennas at the amp input. Maybe the amp has provision for separate VHF & UHF antenna inputs. Many do.)

Back to good news: My junkbox contained a midband trap, a Winegard BRF-170 which I put in line and found it to be near-perfect. Stopband between 120 and 160 (about 25 dB) with minimal effect on the passband.

Bad news, http://winegard.com/offair/traps.htm doesn't show the product. I'm still looking.

Good news: I also have a highpass filter, a Pico TTHPF02M. It attenuates everything below 50 MHz, good for what you said might be a 10m EMI problem. I've found recent references to it in other NGs, but no sign of a vendor for exactly that item. News is still OK, as a "filter" search of the Picomacom website switched me directly to a Yahoo purchase website, where they offer a similar product http://yhst-18278607509093.stores.yahoo.net/pico-0145.html. TV highpass filters with cutoff around 50 MHz are fairly common. For a few bucks, try one if you confirm a 10m problem.

I hope this helps.

Why should you be surprised about power company oil. They haven't had
PCB's for years. Even the pole pigs have clean (?) oil in them.

Silicone oils are excellent from a health standpoint and usually very good from a flammability standpoint. However, the Cantenna relies on natural convection of the oil for cooling and the higher viscosity of commonly available silicone oils will limit the power handling capability of the Cantenna. Remember that the Cantenna must be de-rated when used for long duty cycles, and a high viscosity oil will lower the power rating still more. Also remember that silicone oils are not cheap (and my buddy at Dow would only send me small samples).

I would suggest using modern RF terminations made by Bourns and other companies. These are designed to be bolted to a large heatsink. The CHF9838CNF series is rated for 50 ohms, 250 watts, VSWR below 1.1 from DC to 2.2 GHz. It only costs $27.50 in single lot quantities. I think this is higher than the continuous rating of the Cantenna. I don't know for sure as I disposed of my Cantenna years ago. Digi-Key sells these Bourns terminations if you want one.

I had used transformer oil given to me by the local electric cooperative. I didn't learn until a few years later that the oil was contaminated with Aroclor, a PCB oil. Proper disposal was easy for me as I then worked in the research labs of a major chemical company that had an EPA licensed incinerator specifically rated for PCB destruction. Even so, I had to repackage the oil into special disposal bottles and give the incinerator operators instructions that only one of the bottles could be burned daily. Before anyone asks can they send their oil to me for disposal, I left that company over 10 years ago and am now retired, so the answer will be no.

I did quite a bit of research on trade names of PCB containing oils. In fact, the EPA's list found at http://www.epa.gov/epawaste/hazard/tsd/pcbs/pubs/aroclor.htm is partly a result of my study. About a third of the trade names on this list were unknown to the EPA until I provided them to the Atlanta EPA office.

50. l/2 horizontal dipole vs inverted L 160m band

Newsgroup: rec.radio.amateur.antenna
Date: 2009-01-02 13:34:49 UTC
From: tzitzikas <tzitzikas.3a40096@radiobanter.com>
Message-ID: <tzitzikas.3a40096@radiobanter.com>
Source record: 18531

i have a transmitter about 150 watt (output an 813 tube 1400vdc) at
1431khz (salonika greece) and the antenna that i'm using is an inverted
L antenna (with a less than 5l/16 length ,about 20m vertical segment and
40m horizontal segment). the coupler that i'm using now is l-type . at
http://www.geocities.com/tzitzikas_ee/antenna.gif you can see a
schematic of my coupler.i am using 3 l/4 length radials and 2 l/8
length radials. the ground system is an copper tube 3m approximate
which is burried vertically to tha ground.the distance between
transmitter and ground system is about 10m
i would like to improve the efficiency of my antenna. i have 3
thoughts
1) to cut the antenna at l/4 length and to use an 50ohm coupler (after
the variable coil i must add a variable capacitor 0-1500pf with the one
point grounded)
2) to use an l/2 horizontal dipole with 50ohm feed line (coaxial RG213
cable) and to use a coupler like one i described above (thought 1)
3) to keep the antenna that i have now.
i dont want to transmit by using the ionosphere cause my transmitter
uses a frequency in the band mw, and at the night my frequency is
filled by stronger signals. i would like to have a local strong signal.

which of the above antennas i have described is the best???????
thanks

Might burn and sludge up your resistor. Lots of additives you just don't
need.

I had a cantenna for 20 years with light mineral oil. there was a little
seepage to the top of the lid through the vent. I actually had transformer
oil but never used it because of the thought of that stuff seeping. It
really is a lot cleaner. Check feed stores, Vet supply stores, paint
stores, hardware. Check this out:
http://www.pugetsystems.com/submerged.php
```

One mistake I made with a cantenna was letting it sit on a concrete
floor. The bottom of the can rusted through from the outside. The
replacement can got a good coating of zinc chromate primer, followed
wirh red oxide, then acrylic enamel auto paint.

Jimmie

Jimmie

Mine was always inside and never rusted. I have seen them rust outside though. I put mine in a tray, worrying about seepage getting on the carpet but it would only pool up on the top.

Might be worthwhile to shoot the new can with BBQ paint.

Well, yeah ...

However, the last silicone oil I purchased was at an auction. I was a cannery being close, about 2-3 years ago. It was a 5 gal. tin, seems to be about 10w-15w (no zahn cup to even begin guessing viscosity with); it was $20.00, if I remember correctly. (a lucky fluke, I admit, and food grade to boot!)

However, if I had to choose a 2nd, easily available source, and cheap, I would get some pint bottles of 100% silicone spray used for protecting seats, dashboards, panels, etc. in autos. At $1.88 + tax--a pint, a gallon would be under $20.00. And, again, a cheap easily available source to all--without shipping costs ...

Presently, I used the auctioned silicone I purchased, on my car interior, tires, etc. ... lol

You know, if everyone has so many problems in doing the simplest things, makes one wonder what they do when they hit a real snag! <scratches-head>

Regards,
JS

Thanks for posting these links.
These appear to be nearly identical. According to the
forward in R3403C it is a later edition of MCRP 6-22D. Both
have an error on page 11. In the chart showing surface
conductivity the first two are reversed, that is, sea water
should be marked "excellent" and fresh water "very good" not
the other way as shown. Sea water is considered to be as
close to a "perfect" ground as exists in nature. This error,
and the fact that is was carried over into a later edition,
suggest that the book was not proof read adequately and
there may be other errors, perhaps less obvious. I wonder if
any errata were ever published and if so if they are on line
anywhere.

Tzitzikes wrote:
"Whitch of the above antennas I have described is the best?"

At 1431 KHz, you need vertical polarization to avoid ionospheric propagation.

You can turn your inverted L into a T by connecting its vertical part to the exact center of the horizontal part. Horizontal currents in the capacitive hat will then be equal and in opposite directions and not rafiate. The capacitive hat should be just as effective in loading the vertical section as the horizontal part of your inverted L is but unlike the L, the T should not radiate any horizontally polarized energy. There should be no change needed in your tuning coil and capacitor.

Best regards, Richard Harrison, KB5WZI

I am a bit puzzled. IIRC, the silicone in women's breast implants would/could/did leak and cause fairly serious health problems. Yet, Dr. Ornitz says "Silicone oils are excellent from a health standpoint" and Mr. Smith says: "food grade".

Could anyone take a shot at explaining this apparent dichotomy?

Inquiring minds want to know.

> Inquiring minds want to know.

A friend of mine, in the medical profession, once told me there is only
3 things she knew of which the body would "tolerate" as implant
materials: teflon/nylon, glass, and some grades of stainless steel ...

I don't know, but seems like diamond would be ok, doesn't it? Others
substances? Perhaps she was only speaking of the materials she has
seen, next time I see her, I will ask ... you have me curious now.

JS

68. Does NEC-2 model wires as solid or hollow?

Newsgroup: rec.radio.amateur.antenna
Date: 2009-01-03 00:31:08 UTC
From: david@drumheller.org
Message-ID: <4fdb82fb-49e4-4989-b520-3149b236d20c@k19g2000yqg.googlegroups.com>
Source record: 18542

I've been using 4Nec2, a freeware antenna modeling program based on NEC-2 (Numerical Electromagnetic Code). I'm wondering if anyone could provide some insight as to just how it models current at the ends of wires that are not connected to anything (a.k.a. "free ends" or "open ends").

Does NEC-2 model "end caps" at free ends, which is equivalent to assuming wires are solid, or does it just set the current equal to zero at the free ends, which is equivalent to assuming wires are hollow? Is it possible that it does both, but the specific model is determined by the choice of computational kernel (extended vs. standard)?

I've tried looking through some of the NEC-2 documentation, but I can't find a definitive answer.

-Dave, K3WQ

>In point of fact, I *do* make measurements like that,

I note you slip loose from the constraint of "traceability." Doing measurements "like that" is vastly different in outcome and holds accuracy claims like a sieve holds water.

moving on to some very telling points offered in rebuttal to obtaining 0.1dB accurate power determinations:
>... it *is* within the reach of someone at home with a lot of
>time and care to substitute for expensive gear and calibrations
>(basically, you have to do your own calibration).
And again with:
> (back in the 40s, one built one's physics experimental gear and calibrated it yourself)
where both reveal a disastrously circular logic of what could only be called "self determination" with a very tenuous grasp to accuracy.

It is pleasing to the Ham community to appeal to self reliance, and construction projects, but this doesn't bootstrap accuracy. I can see any number of gaping holes where standards are lacking and ignored entirely.

Yes, it is both commendable and achievable to obtain precision (or its half-brother, resolution), but this is not the absolute accuracy of a 0.1dB power determination.

>Standard power measuring head on a Agilent power meter is better than
>5% at HF, probably in the range of 1% for one head in comparison
>measurements over a short time. The 8902 is sort of a special case,
>but can do very accurate relative measurements. FWIW, the 8902
>calibrates out the measurement head effects.

I have already cited accuracies and errors that conflict with your supposition. You are taking characteristics in isolation and citing them as being representative of the whole scope of determination of power to a stated accuracy. The single example of your stating:
> probably in the range of 1% for one head in comparison
>measurements over a short time.
is relative accuracy, not absolute accuracy, and the relative accuracy point is arguable by your own language of "probably." Probability is

expressed in numbers in Metrology. Basically you have injected an
additional error into the mix. In my short recitation of the
accumulation of error, I omitted this discussion as your original
off-hand statement was far outweighed by the preponderance of error
from a single common example. I chose to allow the cited literature
to describe the complete formal METHOD of determination to reveal the
full scope of accumulations of error rather than recite them here.

>> Scale error demands a full-scale indication to simple keep the error
>> contribution down to 0.1% (a 1/10th scale indication would jump that
>> error to 1%) ï¿½1 digit.
>This oversimplifies a bit.

I fail to see how this "simplicity" constitutes an objection that
nullifies the accumulation of errors.

> the real limiting factor is the accuracy with which you
>know the attenuation of the attenuators you're using to get the steps.

And that too has been covered.

>With regard to mismatch, if you're interested in tenth dB accuracies,

I am interested in tenth dB accuracy, aren't you? Let's recall where
this began:
>>On Tue, 23 Dec 2008 10:29:05 -0800, Jim Lux <james.p.lux@jpl.nasa.gov> wrote:
>>
>>>At HF and VHF, you should be able to do
>>>power measurements to a tenth of a dB, with moderate care.

This statement has now been dismissed by your inclusion (supporting my
observation) of mismatch error - which you subsequently diminish:

>you're going to have to measure the mismatch and account for it. It's
>not that hard, just tedious.

Accounting for mismatch does not correct it. The error it contributes
remains. This is not an actuarial gimmick of Enron bookkeeping. The
off-hand hard/tedious baggage appears to be another objection without
substance.

>The typical power meter head doesn't change it's Z very much,

And yet it still is NOT the Z you would like it to be, except by some
margin of error. Change is not the issue, absolute value is. This
appears to be yet another manufactured objection that points out error
only to dismiss it with a cavalier diminution of "very much."
Metrology doesn't accept adjectives in place of measurables.

Let's return to the claim, however. In fact, a typical power meter
head DOES change its Z, and it is by this very physical reality that
it performs power determination. You may be relying on a specific and
rather atypical head to support your argument. As you offer nothing
in the way of your typical head's design to support another off-hand

comment, we will have to wait for that coverage.

>so once you've measured YOUR head and keep
>the data around, you're good to go for the future. (and do your tests
>at the same temperature, don't use the head for a door stop, etc.)

No, you do not make traceable measurements. Your statement of futurity is an illusion only. Within the context of HP's fine craftsmanship, it is a fairly safe illusion, but not into the unlimited future. The calibration cycle for an RF head AND its reference source (two sources of error) is 3 to 6 months where that calibration data would be amended and changed to follow the natural variation in characteristics. A skilled bench tech might trust the instrument out for several years for relative loss measurements, but absolute power determinations will have long lost their credentials.

If you don't care for the credentials of absolute power determination, then you shouldn't be arguing the precision of accuracy.

There is a world of difference between absolute and relative accuracy.

>As far as calculating uncertainties.. you bet.. it's not just stacking
>em up. But that's true of ANY precision measurement, so if one is
>quoting better than half dB numbers (i.e. if you give any digits to
>the right of the decimal point) one should be able to back it up with
>the uncertainty analysis (which is all described on the NIST website
>and in the tech notes). This isn't hard, it's just tedious.

This repetition of the hard/tedious mantra has the odd appearance of an objection diminishing the importance of established procedures of power determination. It reduces the profession of precision electronics to the repetitive motions of a trained monkey.

By their parts, hard and tedious, the METHODS of making accurate power determination may lend that appearance to the unskilled worker. The METHODS of making accurate power determination have a minimum architecture that defines the limits of accuracy. The METHODS of making accurate power determination have a minimum number of steps to keep error low. Substituting a lot of architecture and adding a lot of steps necessarily increases error. The optimum METHOD and the ad-hoc method may each appear to be simple but tedious, but the quality of their results, and hence their accuracy, are not equal by that crude metric of adjectives. Throwing more gear and procedure that is freely available (rather than as costly necessary) at the problem, compounds error outrageously.

To suggest that the HP8902 can be replaced by the combination of accumulated obsolete gear and elbow grease invites profound problems if you don't know the limitation of the METHOD. The so-called "hard and tedious" part of it contains a considerable body of knowledge and experience. I have never encountered its discussion in this group beyond these two adjectives and few correspondents rarely belly up to the bench to even measure Q (which has its own body of instruction).

>But the
>whole thing about high quality amateur measurements is you're trading
>off your time to do tedious extra measurements and analysis in
>exchange for not sending a cal-lab a check.

This, again, is an appeal to substituting just-plain-hard-work for accuracy. You fail to show any correlation to standards or their necessity. The effort you describe may well pay off in superlative precision; again, investing in resolution without paying for the cost of accuracy.

>The how to do it is all out there. What was "state of the art" for a
>national laboratory in 1970 is fairly straightforward garage work
>these days, and, a heck of a lot easier because you've got inexpensive
>automation for making the measurements and inexpensive computer power
>for doing the calibration calculations and uncertainty analysis.

This is nothing more than sentimentality.

>The slide 36 discussion refers to measuring a signal at -110dBm, which
>I would venture to say is well below the levels that most hams will be
>interested in measuring. And, they are talking about where the source
>Z is unconstrained. In a typical ham situation, these things probably
>aren't the case.

This appears to be yet another objection: "probably aren't the case."

The METHOD dominates power determination accuracy. This is a fact of life. The METHOD mandates the level at which it will be measured. This is not about personal choice and preferences. More than several instances offered in the reference as an example of error analysis is described as a "special case." I see none in the literature that returns us to a sample antenna in an high power RF field, but I see plenty of METHODS that very nearly approximate it, and substantiate considerable (compared to 0.1dB) accumulations of error.

>If you were interested in measuring, for instance,
>the loss of a piece of coax or the output of a 0dBm buffer amplifier
>to a tenth of a dB, that's a whole lot easier than a -110dBm signal
>from some probe into a 8902. The context of this discussion was
>making measurements of antennas, and for that, one can normally
>arrange to have decent signal levels, etc. OR, one is interested in
>relative measurements, rather than absolute calibration. It's a whole
>lot easier to measure a 0.1 dB difference between two signals.

This was your choice of instrumentation; this was your choice of power determination. I have provided an incontrovertible example of how your off-hand assertion failed from your own choices. It doesn't get remarkably better however you decide to amend the conditions and those amendments certainly won't come close to your original off-hand observation of power determination of 0.1dB or less error.

For my simple analysis, I accepted your choice of instrument, I selected the optimal power level, I had to infer your choice of band -

selected to favor you in the least error. I then compounded the errors with a generous choice towards the LESSER RSS error that still resolved to more than 0.1dB error in power determination. This encompassed nothing other than the Instrument without discussion of the necessary components that supported the mystery power coming from the antenna in question. Their inclusion could have been fudged outrageously to devastate the 0.1dB power determination by huge leaps. I chose, instead, to travel a different path seeing that no one was going to embrace that tar baby.

The analysis in Slide 36 illustrates a more complete METHOD and you complain of range. It is but one of many METHODS. This METHOD encompasses the entire scope of determination, and METHOD defines the limits of accuracy. You have not offered us a better METHOD that thus reduces the limits of accuracy to 0.1dB power determination or better as your off-hand comment promised.

* * * * * * * * * * * * * * *

At this point, as an aside, I will offer some subtle, but important definitions from the field of Metrology that weigh heavily on making highly resolved, precise, accurate measurements. First off, those very words I ended the last sentence with (and more):

Resolution - this is the number of digits in your determination.

Precision - this is also the resolution, but to the extent that it is repeatable. If you take 10 measurements of power and get readings that repeat for only 2 of the 7 digits of resolutions you have, your precision is only 3 places at best. Resolution does not equal quality. Basically, the remaining 4 places of resolution are noise and their display is added for the entertainment of intellectual tourists who do not understand science.

Accuracy - this is precision, but only where it agrees with actual value. That is to say, you can successfully get 10 measurements that repeat their determinations to 0.5%, and yet be 100% off of the actual value. Your resolution is 0.1ppm, your precision is 1% and your accuracy may be -50+100% The resolution is now certified crapola.

Relative Accuracy - this is the same as the accuracy statement above, where you are comparing two measurables (two different powers, which then becomes attenuation). It is typically the accuracy of ratios and substitution. It is easier to achieve to higher resolution and your standard need not be traceable, but it should be stable. If you don't care what the actual value is, but only how much it changed, you may find you can claim 0.1ppm error (insofar as this measurement is repeatable to the same digit). There is a large body of instrumentation that so qualifies.

Absolute Accuracy - this is the same as Relative Accuracy against a known standard. It is typically the accuracy of determining an unknown against a physical or electrical standard such as the Ampere,

Volt, Farad, Meter (and so on), and by abstraction, Power (you have to measure two things where the accuracy has to degrade by virtue of additional variables).

Some may appeal that their Relative Accuracy has the merit of Absolute Accuracy - until you ask them to measure the actual, absolute value of their ad-hoc standard. I have built primary standards and measured them to 7 places. Over several years they migrated in value by 2 of those least significant digits, but only in comparison to standards that had "aged" and been calibrated at a national primary standards laboratory. By themselves, I could have fooled myself (and perhaps others less sophisticated) that they were absolutely accurate to the extent of the number of digits my instruments could resolve.

I mean, "Come on!" You have to ask that?

A hypodermic needles injection is "directly." A swallowed substance is directly introduced into the digestive tract, where it is the assimilated into the blood ...

Another example? A bullet from a gun is "directly" introduced into the body, a swallowed bullet is not ...

the only one who would care about that is art who believes that current
flows back down the inside of the conductor. for the rest of us an end of a
wire is an end of a wire... the difference in capacitance from a filled end
to a hollow tube, unless the diameter of the hollow tube is a good fraction
of a wavelength should be negligible.

- There are plenty of things that are inert when
- passing through the gut that will be lethal if
- introduced directly into the body.

Yeah - You can Sallow a FMJ Bullet
and 'pass-it' quite nicely.

-fwiw- a Solid Lead Bullet might produce
different results in the 'gut'.

But that same FMJ Bullet 'passing-thru'
the Body could be very Lethal.

It's pretty strong. I bought the best one I could find, after finding
the previous owner had an underpowered one.

Side note: I don't know if is is an indicator, but this new heavy duty
battery was distinctly old school. It was shipped uncharged, and needed
a full charging after putting the acid in it. I've been used to the fill
'em and go pre-charged batteries.

Either way you decide to do it is fine, but a stub is so easy and cheap, esp if you already have some coax laying around the shanty.

I'd try it and see if it accidentally notched any desired frequencies. The stub is so simple that if it doesn't work, it was only a little time and effort.

After I refurbished my Cantenna (needed a new globar resistor and cleaning), I was able to get a gallon from my local power company (free gratis). It took a few phone calls to find the supervisor of the transformer shop. At the rate their pump runs, the trick was getting /only/ one gallon!

I considered mineral oil but learned transformer oil has better thermal characteristics. I now have a homebrew air-cooled dummy load that will handle over a kilowatt continuously.

I used Shell Diala for years in radar systems. The last time I changed
the oil we used somrthing else, probably cheaper. The main ingredient
in all odf it is mineral oil but it has a few additives. Local PoCO
uses the same. We got some from them one time and they had a RR tank
car full of it.

i would like to ask you 2 questions:
1) the radials increase or decrease the inverted L efficiency when i don't use 50ohm antenna (coaxial cable 50ohm and 50ohm coupler). i know that when we use an 50ohm inverted L the radials increase the antenna's efficiency.

2) i would like to ask which antenna is better for 160m? 1/4 wavelenght inverted L , 3/8 wavelenght inverted L or 1/2 wavelenght inverted L ??
thanks

Has anyone ever measured a difference between aluminum
tubing and a solid aluminum rod at the end of an antenna?

The rod is heavier.

Yes, yes, the rod is heavier. Very funny, but could someone answer
the original question.

The current is close to zero- why would it make any difference?

Huh? Are we both saying the same thing?

If a substance is injected by a hypodermic needle and then 'assimilated into the blood', how is that different from you saying "A swallowed substance is directly introduced into the digestive tract, where it is the[n] assimilated into the blood ..."?

Seems like it gets into the blood stream (and is thus circulated around the entire body) in -either- case. So your point is...?

Back to my original, bottom line question: is silicone in the blood stream good for you or bad for you? (and yes, I DO have to ask, because your response seems to make no sense).

Regards,
Billy

Wrong.!
The primary current is still flowing at the center. Particles occupy
the surface of the inside
and with the inter rejection of like particles produce a hoop stress
between them which
cannot be broken by a eddy current field, if present Thus the
particles cannot be ejected even tho there
is the primary ,current flow in the center ofr the tube. Remember.
the presence of particles is cast in stone
via the extension of the Gaussian law of statics. The presumption that
the current is near zero
is false until proven otherwise.. There is absolutely NO evidence that
reflection occurs in any shape or form at the
material ends of a radiator and all that pertains to such. PERIOD

Maybe Horace Lamb or Oliver Heaviside? Skin effect is dependent on
frequency as well as the material, right? Is the thickness of the
aluminum tubing significant at the frequency where you plan to use it?

I missed the beginning of the thread, so what is the original question
pertaining to?

In any case, I believe the rod would be heavier. ;)

David
You should know better.
Years ago I pointed out that the extension of the Gaussian law of
static results in Maxwells laws
with extension via mathematics. Before then I am sure that you were
aware of magnostatic fields
so it should not come as a surprize that the mathemetics is well
proven. When the mathematics were presented
before your very eyes you came up with reasons that defy the
imagination and totally absurd
You have the "field and waves" book by Ramo and Co so read it from end

to end with a smidgeon of understanding
so you may follow it from first principles. All the answers you seek
are
written in that book and they agree perfectly with mine. Nowhere does
it confirm what you state that Statics have zero connection
with magnetics which thus prevents mathematical connections. As for
hoop stress that is another derivitation of Newtons laws of action and
reaction and Newtons laws apply to the Universe including
electromagnetics via the Standard Model which, by the way ,includes
the Weak force that you also deny the presence of as well as the
chemical critera.
Your engineering ability is forcing your personal credability into the
ground.

That is only because it is not fully up to date just like many other
technical
books including Terman

The World has spent millions of dollars on the C.E.R.N. project in
Switzerland
to investigate neutrious, the weak force and the Higgs field.
They have a home page on the net why not take a moment to read it so
that you will become up to date?

It is not very likely to be "good" for you and depending on how much, it
could be "bad" for you.

But there is the bottom line question of how could an oranically inert
substance get into the blood stream other than through direct injection?

The question is like asking if glass in the blood stream is a problem.

Frank
Please keep in mind the following
NEC is based totally on the extremely thin wire where various
assumption can be made
such as equations being equal to zero in the limit., These same
assumptions can not be held to
when dealing with thick radiators despite the closeness of the
approximations.
Best regards
Art

Calculus is based on homogenous materials or planes where you can
refer dy/dx to
some thing aproaching zero. In the case of using this aproach where
the antenna diameter aproaches zero
this is an invalid aproach for accuracy but O.K. for aproximations. So
much for the foibles of theoretical mathematics.
The vanishing thin radiator cannot be applied directly to a non
homogenous material because at the limits of the the diameter
is unable to support the presence of eddy currents(skin depth) . In
other words the assumption of limi tess ness cannot be held if the
presence of
skin effect is true. Ofcourse if skin effect is not present then you
have a DC current where only copper losses are present.
As always with mathematics assumptions and preconditions are alway
subject to examination. This in no way takes away from the advantages
oif the NEC programs.

Tzitzikas wrote:
"I know that when we use an inverted L the radials increase the antenna`s efficiency."

The same is true of any antenna which works against the earth to complete its circuit. Radials at the surface of the earth may be increased in number until there are more than 100 where the point of diminishing returns is exceeded. U.S.A. government regulations require medium-wave broadcasters to use 120 radials of at least 1/4-wave length or else prove the installed grounding system meets or exceeds the government`s efficiency standard. These radials are separated by 3 degrees for equal current distribution. Thousands of such installations have been documentedand and are proved nearly lossless.

Tzitzikas also wrote:
"I would like to ask which antenna is better for 160m?"

The radiation which counts is along the surface of the earth because it determines daytime coverage. Ionospheric coverage is useful at night subject to many variations and even interferes with the surface wave at some distance from the transmitter.

If some of the radiatinng antenna wire is horizontal, it may introduce radiation which escapes to the ionosphere to interfere with the surface wave at some distance from the transmitter unless it is carefully balanced out as in the case of the T antenna or other antennas with symmetrical balanced capacitive loading.

First, an antenna which is self-resonant presents no capacitive reactance, which needs a lossy coil to balance out. The shortest self-resonant antenna works against ground and is 1/4-wavelength. That makes them popular. It`s a matter of getting maximum current into the antenna. A resonant antenna is unimpeded by reactance.

If an antenna is between 1/4-wave and 1/2-wave in length it can be resonated with a series capacitance. Capacitance is usually very low in loss so it is efficient.

As an antenna grows from 1/4-wave to 1/2-wave it produces greater field strength on the distant horizon, not because it is more efficient but because its power is being radiated at lower angles near the surface of the earth and less is radiated at angles above the horizon.

Best regards, Richard Harrison, KB5WZI

The reference at http://www.nec2.org/other/nec2prt1.pdf p 21 deals
with the accuracey of NEC 2 in respect to the "Thin wire approximation".
From the NEC-4, theory manual, p 21, para 4: ".... the NEC-4 wire model
employes the extended boundary condition in the thin wire approximation,
so that the current is treated as a tubular distribution on the wire
surface......."

>Calculus is based on homogenous materials or planes where you can

Your comments about calculus are confusing. A derivative
is always non-zero -- unless you are differentiating a constant.
The homogeneity, or otherwise, of a material is irrelevant
to the process of differentiation.

>The vanishing thin radiator cannot be applied directly to a non

Most conductors are homogeneous. In fact I cannot think of
a non-homogeneous conductor. Even in plated conductors
the current flows in the plating.

Copper loss still exists for high frequency currents.

That is exactly my point. The skin is not hogenoius even if you
consider the resistive action to be constant in depth thus you cannot
put a limit on the thicknes
or diameter of the radiator! If you do put a limit anyway on skin
depth then you cannot apply the reasoning to a hollow tube.
We can talk back and forwards for ever on the analogy provided with
vanishingly thin radiators but until we break apart the mathematics
such that there is a reflection at the end of a radiator the posters
question cannot be answered.
If one is to model the situation as Cecil suggests we must first
determine how and where the reflection is created and the
applied math provided to support it. I can see no reference via
mathematics that shows the reversal or reflection of current flow
prior to the end of a cycle.If there were such an instance then there
```

must be a determination of the resistance radiation or otherwise
so that any assumption made is factual.

No that is not true as homogenous implies equilibrium and for skin
depth the value (e) comes into beingor what so0me would refer to as
decay
>
> >Of course if skin effect is not present then you

Very true Frank but the radiation resistance plus the resistance
encoutered by surface flow is not related/
proportional to the pure copper losses where skin resistance is not
present where in the absence of
skin depth leaves one with DC pulses.

I am ofcourse still interested what the NEC programs show for
reflection and consequental resistance
which I believe was in Cecil's thoughts to determine the truth.
Hopefully the dialogue between you and I will not drop to the level of
David's where he contendes that Gaussian law of STATICS
is one of the basic laws that Maxwell applied/used without the
required proof..On top of which he denies the applicability of statics
with electro magnetics thus any mathematical aproach cannot be
applicable which is absolutely crazy
The thrust of this thread is solely on the difference of radiation
with respect to hollow radiators and solid radiators and it should be
kept at that to provide a reasonable answer as required in any formal
debate.

FWIW, I worked for Hewlett-Packard about forty years
ago. At the time -hp- wrote all their own manuals. They
experimented with farming out a manual, I forgot for just
what instrument. It was so awful it was unusable and they
re-did it in-house. All too often business people forget
that the concomitant of "cheaper" is equal quality. The
appalling junk coming out of China should be proof enough of
this. Cheap but no bargain!
Having said that this little book is mostly pretty
good.

well art, here is your proof, from the same ramo whinnery and van duzer book
you like to quote....
compare equation (2) in section 2.09 with equation (1) in section 4.07.
note there is no time in either one of them... and section 2 is specifically
about stationary fields, while sectino 4 is maxwell's equations. only 2 of
maxwell's equations actually are about time varying fields, those are
Faraday's law and Ampere's law. The other two are Gauss's law taken
straight from the static case, and the equivalent for magnetic flux... both
of which are time invarient.

>The thrust of this thread is solely on the difference of radiation

David
I bought that book because you refered to it some time ago where you
misrepresented
what you alluded to and now you are doing it again. In your method of
reading did the law that a radiator can be any shape, size or
elevation as long as it is in equilibrium? I can't conceive that a
mathematition of Maxwells staturer could have missed that observation
if as you say he extended gaussian law of statics. Perhaps you have an
answer for that also of the back of your head.
Your positions continue to be absurd from an engineering point of view
and nobody as yet has confirmed your position and what is really wierd
none have denied

misrepresented??? its right in the book, compare those two formula, are
they not the same? is not guass's law, which is a time invarient equation
directly in maxwell's equations??

>In your method of
>reading did the law that a radiator can be any shape, size or

if you can find where 'equilibrium' is a required condition in maxwell's
equations, give me the reference in the book. otherwise you are out of
equilibrium.

>I can't conceive that a
>mathematition of Maxwells staturer could have missed that observation

sure, he didn't 'extend' it... he used it verbatum as the book shows. there
is no need to 'extend' it, its a perfectly good law as it is stated and has
been for many years.

>our positions continue to be absurd from an engineering point of view

Oh My Do you really believe that you are talking on behalf of the
masses?
When Dr Davis of M.I.T. said contrary to the thinking of this group
that Gauss's law of statics
when extended, as I stated, is mathematically the equal to Maxwells
laws as per Maxwells correction.
Many a post has been written since that day castigating the very idea
of equivalence to Maxwell,w

even questioning the propriety of the mathematics. So far nobody has concurred with Dr Davis
with respect to the math that he presented. You David stated that the mathematical stance taken was illegal
because there is no connection with respect to statics ! David you have no credability as anyone who owns a copy of that book can easily confirm for themselves..Just look at what you now have stated that you have found the connection
(tho I doubt it) with respect to Statics. Ofcourse if somebody wants to debate your statement on your behalf I will be happy to refute what you say page by page. Until then the book stays on the shelf because of past experiences with your statements.
In Maxwells time he was given credit for what appeared as proof of the wave theory even to the point of extrapolating same to light
because of the "c" property in his correction which he obtained by ensuring compliance to Newtons law with respect to equilibrium.
It was decades before Foucalt came along with his discovery of a field that matched the Maxwell correction where prior to there was none. Now we can debunk the wave theory as the particle is now in stone

Traceability only applies when you need absolute measurements, and
there you will need something as a standard, since most RF power
measurements are really more of "transfer" measurements. Since power
is basically an energy measurement, then all manner of calorimetric
approaches will work (or radiometric, if you're working in
microwaves).. then it comes down to how accurately you can measure/
hold temperature. It comes back to what's a reasonable thing for a
ham to have that can serve as a local standard. Time/frequency are
clearly the easiest to get to high precision (1E-10 is straightforward
these days with a GPS disciplined oscillator), voltage is a bit
tougher.. 1ppm would be very, very good for hams, 1e-4 seems plausible
with decent high quality voltage references that cost <$100.
Temperature to 0.1 degree should be doable, so that gives you a part
in 3000, roughly.

A ham seriously interested in 0.1 dB measurements will probably be
able to scrounge up something to use as a transfer standard and
scrounge up a way to get it calibrated. For instance, Noise/Com used
to offer a discounted calibration service for sources based on their
noise diodes. Once you've got a standard, if you take care of it, then
you can use it for lots of things.

The original question had to do with accuracy of measurements vs NEC,
and those would be relative, and, I maintain, not too tough to do to
0.1 dB, because you're making comparison measurements with the same
sensor, at pretty much the same level, etc.

All calibrations, whether in a cal lab or your garage start somewhere.
It's how much trouble are you going to go to for that first standard.
Do you do it calorimetrically and use water triple point and boiling
point as references? Do you trust a good calibrated DVM? 0.1dB means
2% in power.. not exactly gnats eyelash precision (e.g. measuring
temperature to 1 degree C out of a change of 100 degrees is 1%)

Sure.. if you are concerned about 0.1dB, then you're going to need to
calculate for yourself, and not take an offhand assertion. That said,
I still think that 0.1dB is reasonable after you take into account all
the uncertainties (and eliminate things that add to the error.. mate/
demate, temperature changes, equipment changes, etc.).

No.. if you KNOW the mismatch, it's not an uncertainty anymore. There is an uncertainty in the amount of mismatch, but in a relative measurement (e.g. received power from a probe on an antenna range.. the original question) the mismatch doesn't change from measurement to measurement, so it doesn't contribute uncertainty to the measurement. Likewise, if you actually measure the reflected power (e.g. in a VNA) then you don't have to use the "power uncertainty due to mismatch" equation which assumes that the reflection coefficient is of unknown angle. Yes, the reflected power measurement will have an uncertainty, but that is a smaller contributor to the overall uncertainty than the "unknown phase of reflection" uncertainty.

> Metrology doesn't accept adjectives in place of measurables.

For a relative measurement the source and load Zs are constant, and whatever mismatch there is will be the same for all measurements (e.g. in an IF substitution measurement, it's the Z looking into the measurement system's attenuator or amplifier). If you're trying to measure the output of a source with varying Z, then, of course, the mismatch will affect the net amount of power crossing the reference plane into the sensor, and you'll need to do that. But there are lots and lots of cases where a ham might make measurements to 0.1dB where the source Z is constant. (say, making noise temperature measurements of the sun with an antenna, or measuring the received signal from a distant transmitter.. same antenna, same physical location, same receiving system.. the measurement system isn't changing)

> comment, we will have to wait for that coverage.

The datasheet for the head gives this. If you're looking at the thermistor/thermocouple mount style head, the Z looking into the head is basically that of the load resistor, which, if held at constant temperature (constant = within a few degrees), I doubt it changes more than a fraction of a percent. A diode head (like the 8481,8487, etc. for HP/Agilent meters) is also going to be pretty good. Agillent claims the increase in uncertainty for ALL causes from an extended temperature (0-50) over the specified 25 +/- 5 is something like 0.9%. Obviously, if want to dot is and cross ts, then you can actually measure it, but you'd only need to characterize it once

(that's the moderate care thing.. a lot of good metrology is just
record keeping).

There's also a change in Z with frequency (an issue if your transfer
cal standard is at a different frequency than your measurement
frequency; not the case in a relative measurement on an antenna
range), but again, you can either take the worst case in the data
sheet, or measure it yourself. That's sort of the difference beween
modern VNAs and old style measurements. The modern VNA uses a set of
cal standards that has properties determined by its mechanical
construction (e.g. short, open, thru) and does the arithmetic for
you. Even the <$1000 N2PK and TAPR VNAs do this. As long as you're
at the same temperature, it should be good.

I think that reasonable folks could differ on the concept of "required
calibration cycle" and "aging life"... It's not like the thermocouple
or load resistor in a power meter head has an aging process that
causes it to suddenly go out of cal after 6 months. More likely, the
cycle is a good blend of economics and the expected variation from a
typical rough and tumble bench environment. Most of the time, the
calibration cycle is more to make sure that the device hasn't
"broken". If your device is using something like a crystal
oscillator, then there IS an aging thing to worry about.

You have raised an interesting question, though, so I'll have to go
ask the folks at the cal lab to see if we have any long term data on,
say, a 848x head to see what sort of aging or changes there are.

>

No, I think you misunderstand "hard" in this context. It doesn't
require any special new thinking to do accurate power measurements.
The methodology is well known, as are the error sources, and the

evaluation of uncertainty. The "hard" part is reducing the uncertainties (i.e. the equipment design) in the first place or in choosing a measurement method that tends to cancel errors (e.g. Dicke switch radiometers use the same sensor for both reference and unknown measurement, eliminating sensor/sensor uncertainty, at the expense of the uncertainty due to the switch). The tedious part is in being careful, doing repeated measurements, controlling the environment, and then grinding the math.

> that crude metric of adjectives. Throwing more gear and procedure

I'd say "may" compound error.

Or, perhaps, getting your accuracy from standards you DO have handy, rather than relying on the instrument's internal transfer standard. An example might be using thermal hot/cold loads to calibrate a radiometer rather than a calibrated diode noise source (where the diode was calibrated somewhere else against a thermal standard). If you don't have the diode (or the wherewithal to send it to NIST for calibration on their radiometer), then perhaps hard work and time can get you a comparison against something you CAN measure accurately (boiling LN2, boiling water, etc.).

> >Z is unconstrained. In a typical ham situation, these things probably
> >aren't the case.

> This appears to be yet another objection: "probably aren't the case."

The original post had to do with comparing measured antenna patterns against NEC models. That IS the case there.

>
>

> observation of power determination of 0.1dB or less error.

I note that a later page in the same presentation shows absolute power measurement worst case uncertainty at 30 MHz of <0.02dB over a power range of -10 to -70 dBm (slide 47).. I just picked the 8902 arbitrarily as an example of something that I know can do relative measurements to this sort of accuracy (as opposed to, say, a Bird 43

watt meter, which cannot) to refute your original statement (paraphrased) that measurements to better than 0.5 dB were impractical.

>Some may appeal that their Relative Accuracy has the merit of Absolute Accuracy - until you ask them to measure the actual, absolute value of their ad-hoc standard. I have built primary standards and measured them to 7 places. Over several years they migrated in value by 2 of those least significant digits, but only in comparison to standards that had "aged" and been calibrated at a national primary standards laboratory. By themselves, I could have fooled myself (and perhaps others less sophisticated) that they were absolutely accurate to the extent of the number of digits my instruments could resolve.

--
So, you measured to 1E-7, and over several years, they changed by 1E-5? That's a whole heck of a lot better than 1E-2 (which is what 0.1dB implies). Those 3 orders of magnitude are why I think it's reasonable and plausible for hams to make measurements to 0.1dB.

--

http://hdl.handle.net/2014/18497 describes one measurement system I designed, built and calibrated. That paper was aimed at a more general audience and doesn't give much of the uncertainty analysis, but it can be found in the several dissertations based on the calibration station. There's nothing special in this system that couldn't be duplicated by a ham for HF or VHF use. Certainly, the NIST Type IV power meter (used in the system to measure the level of the reference source used to calibrate the receiver chain) is something eminently doable for ham use (See Larsen's paper from 1975) and mostly depends on a "really good" DVM for its accuracy.

So, a low density fluid would be the better choice? If that were the
prime criteria, I would think that water or antifreeze would be the
best. If having convection currents agitate the fluid is important,
it would be easy enough to install a paddle stirrer and thermometer.
Oh wait. This is ham radio. Forget the thermometer.

I'm also wondering if the electrical characteristics of water are an
issue for an HF dummy load. Even if someone dumps salt water into the
paint can, the conduction losses to ground from the resistor to the
can ground can't be all that much below 30MHz.

Thermal Conductivity Viscosity
W/mK cSt @20c
Water 0.6 0.9
AF (glycol) 0.24 2.0
Water+AF 0.8(?) 1.5 50%/50%
Silicon Oil 0.1 varies radically
Mineral Oil 0.138 34.5
Fluorinert FC-77 0.063 0.75

Ok, I see why. Water has 1/5th of the thermal conductivity of mineral
oil. 50/50 water and antifreeze won't work. That raises the boiling
point but ruins the thermal conductivity. Pure ethylene glycol looks
tolerable. Other than the health and ecology issues, any reason that
100% antifreeze won't work?

Incidentally my theory is that the Heath engineers of the 1960's used
mineral oil because that's what's inside a Lava Lamp. They were
probably designing Heathkit Lava Lamps but when that failed, they had
to do something useful with the mineral oil.

>Remember that the Cantenna must be de-rated when used for long

Well, if you want expensive and near perfect, there's 3M Fluoinert.
<http://en.wikipedia.org/wiki/Fluorinert>

<http://multimedia.3m.com/mws/mediawebserver?66666UuZjcFSLXTtnxTE5X46EVuQEcuZgVs6EVs6E6666
66-->
About $400/liter for recycled FC-77 and $2,200/liter for the new
FC-770 stuff from various 3M dealers. A 1 gallon cantenna required
3.78 liters or about $1,500 in recycled FC-77. For those hams that
want the very best. Gold plated paint can is optional.

I kinda prefer to use 4ea 200 ohm loads in parallel. In a previous
power amp design, I had to dump 200 watts into a load if the antenna
failed. The thermal resistance of the flange mount was too high for
one device to handle the load at the rated temperatures. However, 4
devices did the trick.

My RF test equipment preference was HP until around the time they changed to Agilent. Now you can always buy more performance for the dollar from someone else like Tektronix or Anritsu/Wiltron. You also get better technical support from any other equipment vendor than Agilent. The Agilent web site is even a nightmare to navigate.

But what really pisses me off about Agilent is the only communication I get from them is what can I buy now? I never get how is the equipment working for me or what features would I want in the future. I don't get notices about firmware/software updates from them either. Basically I have to navigate their obtuse web site to find out about equipment issues, workarounds or updates.

It's probably not worth much, but here's some anecdotal evidence. About 50 years ago several of us at W8LT (The Ohio State University amateur radio club) needed a low-power dummy load to be used at moderate frequencies (e.g. 20 meters). I came up with the idea of immersing a 2 watt, 51 ohm carbon resistor in a large glass of Columbus, Ohio tap water. We found that at 14 MHz putting the resistor under water made negligible change in observed SWR, which surprised me because Columbus water (unlike the stuff we're blessed with here in the Vancouver, BC area which comes right from the mountain snow-pack) was fairly hard. This also indicated that the water didn't put too much capacitance in parallel with the resistance. Water-cooling did allow the 2 watt resistor to absorb a fair bit more power than 2 watts, at least for a while until the water heated up too much.

It's still a heck of a lot better than air.

As I recall, we were in a hurry, we had the resistor, and we didn't have any suitable oil on hand.

Sorry, I goofed. Vicodin etc. It should be the higher the W/mK, the
better the thermal conductivity.

So why is Fluorinert favored for cooling when it has such a lousy
thermal conductivity?
<http://multimedia.3m.com/mws/mediawebserver?66666UuZjcFSLXTtnxTE5X46EVuQEcuZgVs6EVs6E6666
66-->
Since it's usually circulated with a pump and involves direct
immersion, is it because of it's low viscosity and superior electrical
characteristics?

It would also appear that water has 5 times the thermal conductivity
than mineral oil. So, why use mineral oil?

a speculative FEW degrees! You really are wandering the wilderness
here.

>I doubt it changes more than a fraction of a percent.

Doubt? No metrics, except for the half-hearted guess that isn't even
close because you cannot settle on any single sensor, much less the
actual sensor!

>A diode head (like the 8481,8487, etc.
>for HP/Agilent meters) is also going to be pretty good.

Where the temperature characteristic of a diode is a power function?
This is growing more extravagant by each added sentence. You now have
wandered the landscape of power sensing through three technologies,
none of which you can pin down to the actual application, and without
any marked experience in the limitations of any of them.

>Agillent
>claims the increase in uncertainty for ALL causes from an extended
>temperature (0-50) over the specified 25 +/- 5 is something like
>0.9%.

And the claim is for what, specifically? The box or the head? I've
offered links to authoritative resources and specific entries, can you
recite your own or is this stuff now the domain of monkeys in lab

coats?

Yeah, all that, and then try to sink 5KW+ into a paint can ... 20 X 1000 ohm resistors is very minimum, in a tubular aluminum heat-sink-no less, in my humble opinion ... as when you are in key-down, and your attention is diverted, things can get warm, quickly, or so it seems!

This proves it. "Suddenly" - is a manufactured argument if ever one
was offered. You keep the "suddenly" as a trophy, and the rest of us
will be content with the natural progression of aging that doesn't
need to be forced into a spike to serve the convolution of argument.

>0.1dB implies).

I have accurately calibrated instruments beyond the resolution of
1E-12, but not for power. Metrology encompasses many physical and
electrical phenomenon. The standard mentioned above was a resistor,
not power. I said it was a primary standard, not a sensor.

Would the atypical Ham have the capacity to build a standard resistor?
Sure. Could that atypical Ham qualify the standard resistor? Maybe.
Could that atypical Ham calibrate the standard resistor? Not in
decade except by frequent shipment to the nearest primary standards
lab on their terms of calibration frequency - which would be very
frequent given the lack of aging. In that sense, the atypical Ham is
wholly incapable of calibration beyond the sense of it being performed
through proxy. However, as you have already dismissed the frequency
of calibration to the whim of desire - what price performance?

Of course, that same atypical Ham could simply take one certificate of
accuracy for 1ppm and derate it to 0.1% and probably live with that
accuracy for the rest of his natural life. Unfortunately, 0.1%
accuracy at D.C. doesn't lend itself to precision, much less accuracy
at 50MHz. In fact, that standard resistor would probably be off by
several orders of magnitude (10,000% error). I feel safe in saying
"probably" because that error would be overwhelming to the point of
saturating disbelief.

>Those 3 orders of magnitude are why I think it's
>reasonable and plausible for hams to make measurements to 0.1dB.

Try fishing harder that simply throwing money at this.

You still don't have a METHOD for achieving this vaunted 0.1dB power determination, do you? Summoning up vague references to foggy characteristics isn't going to gather up even a 10% accurate determination.

> is something
>eminently doable for ham use (See Larsen's paper from 1975) and mostly
>depends on a "really good" DVM for its accuracy.

This is quite a joke. "Really good" indeed - you may as well add praying to an idol on an alter mounted in the corner of the shack to boost results.

>The original post had to do with comparing measured antenna patterns
>against NEC models. That IS the case there.

And I would say that you have done a job of mocking the performance Mac achieved which conformed to the best practices and METHODs offered in the modern links provided by me. Those best practices and METHODs have survived intact through the intervening decades because of their fundamental necessity. You haven't reduced any of his errors except by an automated sensor system. Given the other irreducible errors that still inhabited his measurements (something you have yet to respond to), power determination still resides in the domain of 10s of percent error.

The case is this error still eclipes your 0.1dB by a vast margin.

High resistivity
High dielectric strength
Low maintenance
Low corrosion = very compatible with most materials
Leaks don't cause more damage
low viscosity
Wide useful temperature range

> <http://multimedia.3m.com/mws/mediawebserver?66666UuZjcFSLXTtnxTE5X46EVuQEcuZg

DI water is very corrosive and requires stainless steel heat transfer radiators among other components. It is difficult to keep uncontaminated and you have to keep changing filters for example. Get a leak and it usually causes additional damage.

Mineral oil makes a mess and is old technology.

I know of one ATE manufacture that used DI water for cooling in the mainframe and test head. What a mistake that was. Every time they had a leak in the test head expensive boards got damaged.

No kidding on how messy mineral oil can be. I had a leak in a
recirculating pump and it put about 20 gal of oil on the carpeted
floor of the radar site. We had to take up the carpet and the asphalt
tile. The floor is now bare concrete because carpet is forbidden
around oil and the concrete will not take adhesive to put down new
tile.

In the food industry, it is necessary to provide lubricants, coolants, etc.,
for the proper operation of equipment and preparation of product. The same
holds true in the pharmaceutical/medical device industries, where silicone
(medical grade 360) is used to lubricate rubber stoppers which are inserted
by machine into vials, etc.

There are at least 2 classifications: (1) product contact, and (2)
incidental product contact. These are essentially the same; just a matter
of degree.

They (silicones) are not a food ingredient.

My positions

I have never said that Maxwells laws with correction is incorrect.
Period

The correction added was the weak force as dictated by Newtons laws on
equilibrium

Foucoults discovery of eddy currents solidified the addition of
Maxwells correction

By additins to Gaussian law of statics to make it a dynamic field is
equal to the
Laws of Maxwell thus justifying the presence of particals instead of
waves

Dr Davis provided the mathematics to show that the extension to Gauss
equals Maxwells laws
Antenna programs by adhering to Maxwells laws include the four std
forces one of which
is the weak force This group as a unit denied the viability of what
was presented

The above is proven via optimizer programs that result in tipped verticle radiators
Computer programs based on MoM provide a closer approximation with respect to radiation than
designs of planar designs because they utelise the existance of the weak force.

Laws of continuity do not apply to fractional radiators as closed a circuit is
provided by current flow thru the center

There is no basis for introducing reflections from the end of a radiator
which has sporned a illigitamate science of it's own

Nobody to my knoweledge has pointed to the Gaussian law of statics to supplant the
presence of waves with that of particles which also extends to light

Eddy currents use is shown universally as a levitating force on diamagnetic materials
a methos used in sorting materials in scrap recovery yards.

Neutrinos / particles have an accepted appearance on this Earth via migration from the Sun
and which does contain mass.

Now David the above brings you back to the reality and not your wandering, there is no hand waving !
If you wish to be specific about a particular point or add a statement that you wish to be added to the above
as pointing to a basic difference in the facts then be my guest. This newsgroup is intended for the discussion of antennas and radiation a position I respect.

I recognise that with the above statements I am overturning facts that are presently accepted where all the statements is a continuity
of showing that the law of statics when made into a arbritary dynamic field in equilibrium provides for the addition
of equilibrium and particles together with particle spin provided by the action of the weak force in the science of radiation

126. The $1000 Power Measurement Challenge

Newsgroup: rec.radio.amateur.antenna
Date: 2009-01-04 18:55:21 UTC
From: Richard Clark <kb7qhc@comcast.net>
Message-ID: <7os1m4d6par1ptmlum6l147mhtbomhbn80@4ax.com>
Source record: 18600

In recent correspondence we have been regaled with the possibilities, the probabilities, the certainties that some fastidious, and well-heeled Ham "could" achieve the determination of RF power to within 0.1dB of its actual value.

This gives me considerable pause as to how that actual value was determined itself, but the explanation of that drifted into the fog of vague generalization and the dismiss of standards. I characterized this as delusional at worst, and simply fantasy short of being fantastically rich.

So, given the swings of claims that seem to hinge on access to exotic equipment, I was offered:

On Sat, 3 Jan 2009 , jimlux@earthlink.net wrote:
>A ham seriously interested in 0.1 dB measurements will probably be
>able to scrounge up something to use as a transfer standard
...
>The how to do it is all out there. What was "state of the art" for a
>national laboratory in 1970 is fairly straightforward garage work
>these days, and, a heck of a lot easier because you've got inexpensive
>automation for making the measurements and inexpensive computer power
>for doing the calibration calculations and uncertainty analysis.

None of these suggestions attended any actual real application beyond the thread's discussion of measuring power from an antenna in a high power RF field from a nearby (10s of wavelengths distant, perhaps) transmitter.

The quote above fairly encompass the solution in Jim's own words. There were certainly more words, and they can be appended to this thread or those above amended as Jim sees fit to force the outcome to match the claim. However, I would like to see something a little more real than fanciful.

This would include a real METHOD and BUDGET for the claim:
On Tue, 23 Dec 2008 10:29:05 -0800, Jim Lux <james.p.lux@jpl.nasa.gov>
wrote:
>At HF and VHF, you should be able to do power measurements to a tenth of
>a dB, with moderate care.

1. That budget (with an ironic eye towards the language's claim of "moderate") is a generous $1000 - with that budget being invested solely towards the measurement (and not in the capital equipment of transmitter and antenna) through the costs of ancillary equipment acquisition and of guarantees of absolute accuracy as further

described below.

2. That frequency is 14.1MHz.

3. That power is 10mW.

4. That application is measuring the full power applied from a 100W rated Ham grade transmitter/transceiver directly (or through a directional coupler) to
a. an unloaded quarterwave thin antenna sited over 120 half-wave radials placed slightly above, upon, or slightly below the ground (slightly being defined as that recommended by an NEC modeling tool for ground radial modeling); or
b. an unloaded halfwave thin antenna sited in free space.

5. That fully expressed tolerances for all components, capital and ancillary equipment involved where the budget also absorbs their cost of determination of their contribution to error.

6. That fully expressed tolerances for sources of system error.

7. That outcome of accuracy of power determination being applied to the nominal 100W of power at the load and not the nominal 10mW of power to the sensor.

* * * * * * * *

This will be a very short thread devoid of conclusion when the poster(s) suddenly become aware of the expense exceeding the budget. For those who challenge this artificial budgetary limitation, try asking Congress for a bailout.

Specifically, Art, then how do you explain the result shown in the link below?

The reflection seen there is not imaginary, It is the result of a good, but not perfect termination by a UHF TV transmit antenna to about 1,500 feet of 75 ohm transmission line.

Wow
Walter Maxwell has joined Richard Clark in an effort to label Jim in
front of everybody
as a fool. Thats right, these two bozoes have decided to gang up on
Jim trying to discrace him
because there is a difference of opinion. Jim was drawn into the
subject because he was not aware
of Richard's background and Walt joined in in an effort to cover up
Richards critisicm of his new aproach to make money i.e. his book
called reflections which is just a bunch of BS with respect what
happen s at the end of a fractional wave antenna.
He will get some money from unsuspecting hams to this group and maybe
roars of joy from some in the nasty stabbing of the poster named Jim.
Walter and Richard deserve each other in this personal attack on a
poster. Both of you need to join the kb9....poster who is intent
of disrupting this group by injecting rudeness and injury to its
members.

Richard, Art says we're bozos. Did you know that? I didn't. When did this come about? I don't believe I was born that way. Yeah, and when was it we decided to gang up on Jim? And what kind of a stabbing device did we plan to use on him? I can't remember.

And please, Art, did you have to put us in the same class as that kb9? I don't think Jim is the fool here.

Walt, W2DU

You can send me a private e mail if you wish, but if you have a
problem that you
need adressing then make a separate thread/posting to the group as a
whole
with a suitable title relative to what you want to be addressed.
For myself I am not in your employ thus I am not required to follow
your demands
I am sure your requirements for an auguement can be addressed by you
in joining
other threads

I just wanted to clear the field with respect to your wanderings from
what has been actually said by me
to establish the true basis of your attacks. That is why I have
restated again my position to combat your lies.
It is your idea that I should publish it not mine. I am happy to
supply a record of my work and will supply more as I procede.
It is not necessary to me to get aproval of what I present but I am
willing to debate possible errors in my work as long as it is directly
to the point
and not as a basis for mocking. This action is what I call a matter of
sharing my work to provide a difference viewpoint with respect to
radiation.
Initially it was demanded of me to supply the math and this has been
done by another person independently of any input from me. As a
doctor working for M.I.T I feel he is qualified enough on the subject
such that he deserved a hearing as well as a certain respect.
As yet nobody has shown any reason why the mathematics should not be
accepted so until that point comes about my work stands

Yet you challenge others to respond to your posts here, when probably none is in your employ.

Your evasion of comment on r.r.a.a. to what I posted has the strong likelihood that either you didn't comprehend the meaning of the test report in my link, or that you did, and want to avoid the fact that it proves your belief about reflections to be invalid.

Walter both you and Richard take a delight in hurting people as your
histories shows.
I suppose you can call anybody who opposes you in a discussion
personal insults,
names or anything else to achieve your aim to harm those who do not
provide an
alliance with you and what you say. Both of you have done it many
times before
and will probably do it again to unsuspecting posters. I just want to
ensure that
newcomers recognise both of you for what manner of men (should I use
that term?)
you actually are. Forewarned means fore armed and that goes for your
crappy book also
that you hawk for money with hams on the pretence you are supplying
scientific hams
and not the unsuspoecting :"
ordinary "hams.
And YES I put you in the same class as KB9......
since your intention of destruction to this newsgroup is the same as
his
as you have just shown by this ugly attack with intent to hurt.
You and Richard deserve his companionship as you are like people in
what you do
Art Unwin KB9MZ

You are welcome to your opinion! To change my thoughts how ever you
need to provide fact that specifically
address what I state as what is untrue. If you can't be specific in
providing relavent discussion
then I am comfortable with what I have found.
I would love to read something that addresses my findings
that prove them to be in error so I may rethink my position, a
position that any
engineer should be happy to do rather than throwing things to hurt.
I have made no effort to hide my identity as the owner of the stated
thoughts.
The foundation of my work is the elargement of a static law to make it
a dynamic field in accordance with the laws of Maxwell.
Since you and others have rejected the feasability of that aproach as
well as the accompanying math I see no reason why you should pursue
me! I agree to disagree, what is so wrong with that?
Art
I am open to changing my mind if proven in error but the fact is that
all I get is diversions to discuss at the behest of other posters

Art is overheated.

0.1 dB could be a power gain of 1.02 or 0.977.

If the power were 100, and the power read 102 or 98 that would be about 0.1 dB (from Terman`s Handbook).

My Bird Model 43 has a specified accuracy of +5% or -5% of the full-scale meter reading. It is a reasonably accurate meter for field use. If the scale was 100 and it should be reading 50, it could read 55 or 45 and be within specification.

My usual hope when making commercial measurements was within 1.0 dB.

Best regards, Richard Harrison, KB5WZI

Bull.
Maxwell made an addition to the laws provided.
It was this addition he was lauded for. The addition he made
was to bring the formula suplied to him for condensing by justifying
the = sign
which is required for mathematics to show equilibrium exists and
Newtons law was being followed.
What he did was to ensure that all the units designated added up to
zero. To do this he added the Maxwell correction
which he named as the displacement current now designated as the root
of skin depth resistance.
It was decades later that Foucault found a match that satisfied the
metrics that Maxwell addedto satify the requirements of mathematics.
Maxwell supplied no evidence of experimentation of his own at that
time and was functioning as a mathematician
in the condensing of laws established by others via
experimentation ,.
the majority of which were seen to be duplicates.
I have read nothing that disputes the above account tho the lack of

communication during those times suggest that it was others
like Heaviside and Green and many others were the owners of various
discoveries such that arrangements were changed to disguise theft.
This same problem is still occuring in academia where a scientist was
laid off after a discovery he made and the remaining two scientists
took ownership of this years Nobel prize..
Some books condense this history by ommision but these acts do not
rewrite history or apply redactions to the white paper he wrote
that still exists.Now Richard, if your posting was made to suggest
something else you are welcome to respond.

"-----i.e. his book called "Reflections" which is just a bunch of BS with respect to what happens at the end of a fractional wave antenna."

Everyone should have access to the 3rd. edition of "Antennas" by Kraus, Marthelka, and associates. It is a true treasure. On page 177 is found Figure 6-7, Approximate natural-current distribution for thin, linear, center-fed antennas of various lengths.`

In each case, at the open-circuit end current drops to near zero. No surprise, as Terman says on page 866 of his 1955 opus:
"Under most circumstances the losses are sufficiently low and the ratio of wire length to diameter sufficiently great so that to a first approximation the current distribution can be taken as that for a line with zero losses; it then has the characteristics discussed in Sec. 4-5."

Section 4-5 is titled: "The Effect of Attenuation on Voltage and Current Distribution".

Point is that antennas share current distribution characteristics with transmission lines, and Sec. 4-5 is in Terman`s Chapter 4 (Transmission Lines). This chapter starts on page 82 of "Electronic And Radio Engineering" from that wonderful year 1955. The transmission line chapter shows in excellent detail how incident and reflected waves combine, and the energy patterns produced on antennas as well as on lines.

Walter Maxwell is in-step with Terman and Kraus.

Best regards, Richard Harrison, KB5WZI

What does it take for you to understand that I am NOT in agreement
with the books?
Your lemmings aproach that if it is printed in a book it must be true
is just not my style.
'I see no discontinuety at the ends of the antenna so the law on
discontinuity does not apply..
I do see a discontinuity in a transmission line so the laws on
discontinuity do apply..
As in the past I have stated why I am not in agreement with the books
as I cannot justify it via first principles.

I have asked for input as to what the discontinuity is that creates a reflection which requires the application of the law.
nobody has explaned to my satisfaction the position taken by the books. My suspicion is that idea of discontinuity was assigned prior to the Foucault discovery when the pertinent facts were unknown tho I do suspect some residences are wired with an open circuit in lines to save wire and thus costs required for a closed circuit

"As in the past I stated why I am not in agreement with the books as I cannot justify the principles."

On the topic of current distribution, I believe my eyes. I`ve plotted the current distribution of all the elements, driven and parasitic, in an HF curtain antenna array of 4 bays and reflectors. During the data acquisition it was driven by a 50 KW transmitter.

We hung thermoammeters in loops suspended below the elements and towed them along with ropes while we read them using the transit`s telescope. We recorded the readings at regular intervals. As you already guessed they conformed very well to the curves printed in all the books that art disdains (smiley face).

We also checked signal strengths in targeted countries and compared them with a reference half-wave dipole suspended at the same elevation as the center of the array and replacing it for 5 minutes on a 5-minute cycle. The characteristics of the new array coincided with the design and scaled model tests very well.

Seeing is believing!

Best regards, Richard Harrison, KB5WZI

No problem. Send money. This is, after all, something I do for a living. I assume, of course, that your $1000 budget assumes labor is free? (the usual situation for ham measurements)

As you are well aware, most of the cost of accurate (and perhaps precise) measurements that are calibrated is not in the equipment, but in the knowledge and effort in making the measurement and doing the uncertainty analysis to prove that what you say is the measurement is within some known distance of the measurand. After all, one could beat your $1000 budget by saying that you should start with sand and iron ore, and invest copious effort in smelting, refining, machining, etc... Certainly, the cost of preparing the uncertainty analysis is low, being paper and pencil, aside from the labor. The books sold by Lindsay Books might be an example of how one can start with scrap metal, and wind up with a machine shop, albeit at the investment of substantial time.

If one has to pay for the skilled labor, either directly, or indirectly by buying a piece of equipment designed, manufactured, or calibrated by someone else, it's another thing entirely, eh?

I will concede that there is a catch.. if one is investing one's free labor, it is conceivable that the time required to start from first principles and raw materials would be long enough that your standards or equipment would drift enough to prevent achieving the measurement accuracy needed. It's the "you can't use a striped snake as a scale/ ruler, because it keeps moving and growing" problem.

However, from an academic perspective, your challenge is interesting. It would be interesting to see a decent article in QST or QEX that would describe readily achievable measurement accuracies for hams (and do away with that horrible term you see in ads and equipment reviews: "lab-grade"). Interesting, but not as interesting as other things I might spend my free time on.

Look.. you're asking for specifics and details. That's out of scope for a discussion like this. In the context of a discussion list, to which all of us contribute as an avocation (at least, I suspect that nobody is getting paid to participate in rec.anything), I assert, with some casual backup, that it is possible for an amateur to make power measurements such as those to validate a NEC model to an accuracy of 0.1dB. You assert that it isn't, and ask that I provide details beyond my casual assertion.

We can go back and forth about metrology, but, realistically, I'm not about to go dragging out data sheets and doing an uncertainty analysis which is of very little value to me, personally, and realistically, of little value to anyone on this list.

As with many precision measurement problems, the method has to fit the thing being measured, so to spend a lot of time and effort on any arbitrary contrived example (such as the one in this thread) isn't necessarily going to be general or applicable to any other examples. So why beat ourselves up about it.

The folks who pay me seem to be happy with the measurements I do (and I assure you, I do measurements or generate signals to better precision than we've been talking about here, some are even published in the peer reviewed literature) . The folks who pay you are presumably happy with the measurements you do. Neither of them pay us to solve ham radio's problems.

Pace,

Jim

RF power at 14.1MHz or including all the spurs and harmonics that come
with it? They're probably not much of an issue with the typical ham
100watt xmitter, but certainly are a problem with QRP hardware that
sometimes has no output LPF of any kind.

Also, do you want the 50 ohm terminated RF power, or measured through
the line to a random antenna load?

>3. That power is 10mW.

0.1dB is about 2.3% accuracy. Plenty of lab grade hardware around,
but none with 10mw full scale sensor:
<http://www.bird-electronic.com/products/subcategory.aspx?sid=79>

However, with a $1000 prize, I guess something cheaper will be
required. How about a:
<http://www.ohr.com/wattmeter.htm>
Not anywhere near as accurate as you want, but for a single 14.1Mhz
frequency, I would have no problem using a properly calibrated signal
generator to create a calibration chart. Also, some environmental
isolation and a temperature compensation chart will be useful.

Ummm..... why do you need such accuracy? Is there some kind of QRP
ultra low power contest that I don't know about? Amateur metrology?

Send the $1000 to the address below.

When I was in the Navy, we had some gear that used a high power TWT. It was immersed in a bath of a fluorocarbon called FC-75, trade name Fluorinert. Good heat conductor, great insulator, totally inert. Supposedly, you could drink it. It's still around. Google FC-75 and wikipedia will tell you all about it. $68/ten gallons is a little pricey for my Cantenna but you might not think so.

Here's a summary of that chemical family's characteristics for the curious:
http://www.acota.co.uk/products/fluorinert-electronic-liquids

Here is a transmission line simulation of half of a
dipole in free space. The resistivity of the wire has
been adjusted to simulate radiation loss resulting in
a feedpoint impedance of 35 ohms.

http://www.w5dxp.com/stub_dip.EZ

If the line is terminated in its Z0 impedance of
approximately 620 ohms, the current distribution
clearly shows the forward current including phase
shift.

A #14 horizontal wire 30 feet above ground is a "single-
wire above-ground transmission line" line with a
Z0 = 138*log(4D/d) = 600 ohms where 'd' is the diameter
of the wire and 'D' is the height above ground. The ground
is the other half of the transmission line.

Well Jim,

"Beating" the budget is a strange progression toward tackling a
problem, couched in sentimentality worthy of "Tess of the
D'Urbervilles."

Half that budget could buy the RF Head to the HP 8902 measuring
receiver. In my various standards labs, we would rent it for a month
at 1/10th the cost. $50 and fully traceable with an equivalent of
$9500 acquisition potential available from a budget barely nicked. If
you prefer to build it up from components of sand and iron, an abject
collapse of alternative solutions, then the remaining budget has no
utility. The defeatism of "sand and iron ore" capped that off
majestically.

I well anticipated that putting a budget to this would cast a pall of
failure if this problem's solution were cut off from infinite
resource. I'm amused it came with the sallowness of antiquity.

O.K. you win. Maxwell never did add the correction factor later to be
known as the displacement factor.
It is not known how that addition came about as Gauss Faraday and
others never included it in their findings
It is known however, that the name assigned to this addition was by
Maxwell while others were watching T.V.
Obviously somebody had sneaked in an addition to the supplied data
while others were engrossed on the T.V.
as the football game was ongoing.
Maxwell and computer programs were not mentioned at that time nor was
the ARRL handbook, these came about much later
where the antenna was viewed as a vanishingly thin radiator where the
inside diameter was too small to non existent because of the skin
depth that met each other from both side thus cutting of passage of
anything from the top of a radiator.
Because of the reflection created by the thin radiator the current
refersed direction and travelled down much faster as the circular
fiels
now aided the flow of current instead of resisting it like it did on
the upward direction. Richard, right on. You have got it right without
a doubt. I am now convinced. Presumably you are happy now you have
been vindicated and can now put your pen and pencil down.

Hi Jeff,

Power is heat in this particular scenario. All forms of heat
contribution lend to error. The specification (in part):
4. That application is measuring the full power applied from a 100W
rated Ham grade transmitter/transceiver
is sufficient and necessary for the challenge's purposes.

>Also, do you want the 50 ohm terminated RF power, or measured through
>the line to a random antenna load?
7. That outcome of accuracy of power determination being applied to
the nominal 100W of power at the load and not the nominal 10mW of
power to the sensor.

Consult the complete part 4 specification for alternatives in the
load.

>>3. That power is 10mW.
>
>0.1dB is about 2.3% accuracy. Plenty of lab grade hardware around,

That is why I selected that power level. An instrument does not
encompass a system, however.

>but none with 10mw full scale sensor:
><http://www.bird-electronic.com/products/subcategory.aspx?sid=79>

None? And this is in the same span of a paragraph regaling the
commonplace accessibility of lab grade hardware? I now have to ask
what kind of lab are you thinking of?

Accuracy is in the calibration. I have calibrated some pretty rough
looking gear to accuracies that better commercial equipment. The
specification was purposely tailored for Amateur application, to the
least constraint, to the maximum of accuracy, for the cheapest cost.

>Ummm..... why do you need such accuracy?

I don't.

>Is there some kind of QRP
>ultra low power contest that I don't know about?

Possibly. There are a multitude of activities you may be unaware of,
and I would be the last to know.

>Amateur metrology?

Yes, a conceptual strain apparently. In this age where the closest a
Ham gets to technology is pushing a credit card across the display
case for a new toy, this has proven to be asking for too much.

>Send the $1000 to the address below.

Send it for what? Do I sign as Treasury Secretary Paulson?

Iappreciate the concession. Maxwell by most accounts richly deserves the credit he won.

I received over a dozen books for Christmas all on electromagnetism. I am trying to become familiar with them. One of the group is, "The Holistic Inspirations of Physics" by Val Duser. Chapter 18 is titled: "Maxwell, Field Theory, and Mechanical Models". On page 274 it says: "In the history of the rise of the concept of the electromagnetic field, James Clerk Maxwell holds pride of place. Maxwell`s equations of electromagnetism are a part of classical physics least modified by the introduction of twentieth century theories. Maxwell`s equations trumped both Newtonian mechanics and classical thermodynamics in the formulation of relativity theory and quantum mechanics. Einstein modified Newton`s laws of motion in order to preserve Maxwell`s equations in special relativity. Max Planck modified the laws of dlassical thermodynamics (making energy discrete rather than continuous) to preserve Maxwell`s theory of radiation in early quantum theory." There`s more but I`ll not bore more. Read the book.

Hi Richard,

A commendable selection to quote, and far from boring.

I bought one and yes it does cover the full 144-148 Mhz band.

I've read some Q&A about ladder line and I didn't see exactly my question. I want to run 450 ohm ladder line into the house. my tuner has a built-in balun for a ladder line so I think I can just run the ladder line all the way to the tuner.

How do I physically attach the ladder line to the house? All I can think of is to nail it right through the spacers onto the side of the house. But I don't know if the nails will interfere with transmission at all.

A second that comes to mind when considering this setup: if I run the ladder line all the way to the tuner, how do I ground it?

Thanks,

> known standard.

Roy, certainly you must recognize that the term dBi is not a direct unit, or measure of field intensity (field strength). The direct, primary unit of measure of field intensity in accurate, common use is volts/meter (V/m).

The term dBi is only a measure of the relative gain of a particular radiator in particular directions stated in decibels with respect to an isotropic radiator.

Other things equal, the field intensity at a given location is determined by the gain of a transmit antenna system along paths serving that location ALONG WITH the matched, r-f power applied to the feedpoint of that antenna.

The gain of a transmit antenna system in dBi includes nothing about the absolute amount of power it radiates in various directions. Therefore by itself, antenna gain(s) in dBi cannot define the absolute field intensity in standard units/sub-units of V/m that such an antenna can produce at a given location.

Ergo "dBi" is not a measure of absolute field intensity (field strength).

Some have tried using 1-ft lengths (or so) of PVC at the corners of the
house.
Cut a slot in one end of the PVC, put a nail-hole or two near the other
end - secure the line in the slot of the pvc using nylon ty-raps.

etc. Search for "electric fence insulators".

If you want to be really creative, you could just build a spacer from
ABS or PVC pipe, using a flange mount at one end, and a hole drilled
in the pipe to support the wire. Maybe a plastic "T" at the end to
support both wires on one insulator. Be creative.

No ground required for a balanced system. However, methinks it's a
good idea to ground the radio and the antenna tuner case.

Use coaxial cable to get through the wall, then a BalUn outside to
transition to the balanced transmission line.

I'm running a Van Gordon All Bander dipole. It utilizes 450 twinlead from the dipole, thru the barrier into the house and connects to the 4:1 balun in my MFJ-989C manual roller inductor tuner.

Instead of drilling a hole through the cinder blocks of my basement wall (finished), I made up a barrier insert from a piece of 2x4" lumber to fit under the lip of my window. I drilled two holes through the 2x4" lumber spaced at the same distance as the conductors in the twinlead. I then used a router bit to connect the dots. A very thin router bit. In fact, I think it was the bit from my cut in any direction saw that I bought several years ago and can't think of the name of it at the moment. They were all the rage on TV. It rotates like a drill bit or router bit. I hope you can follow me.

I made the cut in the barrier board for the twinlead tight enough that I haven't even bothered to silicone up the gap, it is that tight.

I haven't had any problems with it at all. No fires, no arcing, no scorching the wood. I think it would take a lot more power to do that than my 1kw Ameritron AL-80A can produce.

Is it a PITA (Pain In The Ass)? Yes. But it gets me any band that I want, including six meters (in fine fashion too). If you go the coax route, you'll end up with a G5RV that won't take more than 200 watts without frying the twinlead, or you'll end up with a trapped doublet that only gives you a few kilohertz operating bandwidth on most bands. Chances are that some bands will be unusable unless you have a good tuner (no, not an autotuner - they don't have enough "swing").

Running a piece of coax into twinlead with an antenna with high SWR can generate high enough voltages to punch a hole through the coax' dielectric. After that hole has been made, the voltage needed to jump that arc from then on will be much lower, meaning that your signal will sound crappy and you may have problems with your rig.

I put up with the 450 ohm twinlead all of the way into the house because it provides me with the most bands in the smallest space. It will also handle a kilowatt without protest.

Oh, I haven't seen a 4:1 balun that is worth what it costs to ship to your door that sells for less than $139. I've gone through three brands lately. Brands that were supposed to be (and used to be) top shelf. Makes me wish I had held on to the good one that I bought years ago. That'll learn me.

Good luck.

James,
Since it's been a while since ladder line has been in common use, there aren't many 'standard' ways of doing things in common usage anymore. So, as long as you keep a few things in mind, your imagination will supply you with any number of 'ways' to do things. Sharp bends, being close to metal things, and 'deforming' the feed line's shape too much are things to avoid. After that, it's more or less whatever you can think of, sort of. Lot's of 'wiggle' room in that, your millage may vary, etc.
Good luck.
- 'Doc

Baluns don't like 'funny' impedances. Better to use 75 ohm twin through
the wall. If you don't have any lying around, maybe a bit of domestic
twin power cable/cord could be pressed into service.

Art, the link below leads to empirical proof that such reflections exist.

H. Gihring and G. Brown of RCA measured the relative current distribution parallel to the axis of monopole radiators of several lengths and widths, using an r-f current probe driving a thermal meter.

The current distribution measured for the three radiator lengths plotted all show the presence of reflections from the top of the vertical wire, and in all three cases, current falls to zero at the end of the radiator.

These are all fractional wavelength radiators not meeting your definition of an antenna in "equilibrium."

This demonstrates that r-f current does not travel on the outside of a wire on the way to the open end, and return from the open end along a non-radiating path down the center of that conductor, as you believe.

I've had good luck bringing 450-ohm line through the window using
MFJ's 4602 window feed through board. It has ceramic feed through
insulators for the balanced line, more feedthrough's for a random
wire, three coax lines and a ground wire. Even includes weather
stripping and a burgler bar.

James,
You don't mention whether your antenna is resonant or not.
Nor do you mention where your feed line enters the house.

I use 600 ohm ladder line to feed my 220 foot dipole from Antenna
tuner to Ten Tec L Tuner located near a basement window.

There are a number of problems that I have solved since my antenna
is between two trees about 300 feet apart.

I support it using Dacron rope at both ends. One end is fixed.
the other goes through a pulley to a 40 lb sealed box of cat litter.
This helps to prevent the destruction of the antenna by wind-
whipped trees.

The antenna may be overkill: #10 copperweld and W7FY feed line.
However, 40 lbs does not keep the antenna from flexing +-6-8 feet..
You need spring action of some sort to prevent the feed line from
being ripped loose from the house or point to which it is first
attached.

I use plain string/twine to make an attachment from house to a
spreader in the line. The string is adjusted so that the line is
straight to the point where the string is attached to the house entry
point and so that the line above where the string is attached is
"draped" providing the ability for the antenna to go up or down 6-8
feet from its normal position. Under NE ice conditions it does drop

that much and in high winds it can go up the 8 feet.

I bring the line into the house through a basement window in
which a Plexiglas insert has feed through insulators for external
ground and the feed line. The string limits tension and flex on those
insulators.

Feed line from the insulators goes to the tuner when operating
and to ground when not.

There are feed line lightning arrestors that use spark plugs as
grounding elements. I have not used these as I am worried
that standing wave voltage nodes that I have on the line might trigger
the spark plugs when running high power since I use the antenna
from 160-10 on CW and SSB.

If you have questions about my arrangement, I'll be happy to try
to answer them.

MFJ offers six window-mounted feed through panels for such.
Their numbers are 4600-4605. MFJ-4600 has four balanced
and two coaxial feed-throughs.

> Oh, I haven't seen a 4:1 balun that is worth what it costs to ship to your
> door that sells for less than $139. I've gone through three brands lately.

If one doesn't know what magnitude of impedance is
being encountered by the balun, the best balun
solution is a husky 1:1 current (choke) balun, not
a 4:1 voltage balun which is designed to deal with
200 ohms, not 2000+j2000 ohms.

I have thought of running ladder line through the wood above the
basement wall, and accross the joists above a suspended ceiling.
My main concerns are: the very high field intesity on the plane of
the transmission line, and the high voltage present when using a
short dipole. For example with 100 W in; a 100 ft dipole, 55 ft
of transmission line on 1.9 MHz shows: 400 V/m (peak) only 6"
from each side of the ladder line, and a peak input voltage of
2.4 kV.

While the above is an extreme example I think some analysis
needs to be done before attempting such an instalation. With
all the satellite coax, and house wiring in the ceiling I wondered
how much TVI I would get. On 40 m I estimate about 8 V/m
(peak) from the antenna (1Kw out) at the TV. It is enough to
get into the remote control circuitry, and turn on the TV menu
blocking out the picture.

Frank,
The 'simple' answer? Keep away from 'stuff' it may interfere with.
As for the worst case thing with high voltage? Change your antenna
arrangement.
How about hanging that ladder line from the suspended ceiling? Out of
the typical 'foot traffic zones'? Anyone asks, tell'em it's an RF
railroad line to your antenna. Sound crazy? so what, 'they' think
we're crazy anyway...

That's through a window, not through a wall. I use the MFJ myself.

If I did want to use non-resonant antennas I would locate a tuner at the antenna feedpoint, not at the generator (transmitter).

Then you would cheat yourself of a fair amount of propagation and some of the lower and higher frequencies available with such a set up.

You're not going to keep RF out of the shack, regardless of which system you use. You might be able to keep some of the hot spots outside, but often times they are close enough to the station that it is really a waste of time.

This fascination with resonance is a leftover from CB thinking. How many warships utilize resonant antennas? Yet they communicate the world over.

The aversion to transmatches is a ham cultural trait that has no basis in reality, just as the CB'ers are hooked on resonant 50 ohm antennas. It's a characteristic of the culture(s) of both types of operators, with no basis in practical operating engineering.

FYI my 80 meter dipole with ladder line all way to the indoor tuner
does not emit RFI in the shack that I can notice, even when put into
all band use.

I wouldn't say that. As an example, I've done tests showing that no
matter how careful I am with the tuner, it's settings, decent open
wire feeder, etc, I could never quite equal the performance of a coax
fed
dipole when feeding the same antenna using the tuner and ladder line.
Quite close granted, and to many people a non issue, but there *was*
a difference. Of course, the coax fed dipoles I use would generally
be considered a single band antenna. But that's no problem here.
But if I have my way, I avoid tuners if possible. I'm trading the
ability of fairly efficient multi band use, for the slightly more
efficient
coax fed single band antenna. I want to radiate every drop of RF I
can.
Also the settings of the tuner are fairly critical for the most
efficient
use. I have a 989c also, and I have done extensive testing with it
using various settings vs efficiency.
I found with the usual T network tuner such as the 989c, you might
be able to tune a load with 25 or more settings. But only the setting
using the least inductance will be fairly low loss. All of the
settings
that use more inductance than required show more tuner loss.
Up to about 20% of your power is lost in a worst case scenario.
So that is another issue. Small, being as one can make sure to
use the least inductance, but it's just another thing to fuss with
when changing bands.
Myself, I prefer to use multiple element antenna elements to
provide multi band capability. The system efficiency is very high,
and I don't have to do anything when I change bands.
It's not using a resonant antenna that makes it very efficient.
It's the ability to use the 50 ohm radio to a low loss 50 ohm
feed line, straight to the appx 50 ohm antenna without any
semi lossy mickey mouse stuff in between. :/
Now if I were required to use only one wire for all bands, I
wouldn't have any problems using ladder line and the tuner

to feed a single dipole. It will work quite well, and being I don't have the coax fed to compare to, no one will notice the difference.
But I bet they would notice a slight difference if I did have both to compare to. The reason I know this is because I have tried it. "75m" I could see the difference on receive, no real need to compare on air reports.
But I did anyway, and as expected, they saw about the same difference between the two systems.
When comparing the ladder line and tuner system vs the coax system, if I had a signal that was 40 db over S9 on the tuner system, it would bump up to about 45 db over S9 with the coax feed.
For me to see that large a difference on receive, the tuner loss can not be considered to be just an illusion or not based in reality.
I have no problems with anyone else using one, but I think it's a stretch to say that anyone that prefers to avoid one is trying to emulate a CB'er.. :/

Most of the wiring in the ceiling is what I put there. I just wanted to
demonstrate some of the problems associated with such an instalation.
Passing high voltage lines through wood -- even with a ceramic
sleeve -- is what really bothered me. The fact is I have room for
a 200 ft dipole, but on 160 m there are still high voltages on the
transmission line. I have pretty much made up my mind to build
a remote tuner, but the parts are very expensive.

> can.

There are actually a couple of different consequences to using a non-resonant antenna, and they're often confused or lumped together. The first is the potential for tuner loss. In many, but not all cases, it can be made negligible -- after all, 25% power loss is only a little more than 1 dB. But of course no argument can be made against someone who considers "every drop" -- even a fraction of a dB -- important. The rest of us can usually use a tuner without any perceptible reduction in signal strength. We do need to keep in mind, however, that there are cases where tuner efficiency can be truly bad, and avoid them when possible.

But amateurs tend to use multiband antennas without any thought at all to radiation pattern. When the frequency gets considerably higher than a dipole's resonant frequency, the pattern changes. So there's a good chance that the pattern will have nulls in at least some directions where you might want to communicate. In those cases, the difference between a half wavelength dipole and much longer dipole can be striking. People who don't understand the reason for the difference often mistakenly attribute it to a change in efficiency rather than pattern.

It's relatively easy to measure tuner efficiency when it's working into a nice resistive load. But I'm curious about how you measured the power the tuner was delivering to a more realistic non-resonant load impedance. The only way I can think of to do it with any semblance of accuracy is to connect two identical tuners back-to-back and measure the power out of the combination. Is that how you did it? If not, how?

Balanced tuner or balun plus unbalanced tuner?
If balun, what kind? Was the balun seeing its
designed-for impedance?

What do you think would be the A/B results for
a resonant coax-fed dipole vs my notuner dipole?

That's another reason why I prefer the separate elements for multi
band use, vs the single wire.
I generally prefer the normal dipole pattern on most of the bands
I use.

It's been so long since I did that, I forgot exactly how I came to
that conclusion.
But I think I was using my resonant coax fed dipole as the load,
and pretty sure I had dual watt meters. One before the tuner,
and another after the tuner. The tuner has an antenna switch
to bypass the tuner.
I believe what I did was measure the power on both meters with
the tuner bypassed, and then tried using the tuner as a "line
flattener", more than an actual tuner, being the system was
already resonant.
I tried various settings of the tuner, trying quite a few variations
in inductance vs cap settings to see if I could notice much loss
with the tuner inline. The radio was my old IC 730 and I used
full power for the tests. The meter after the radio was used to
verify the appx power from the radio, and it stayed fairly constant
in all the tests. The meter after the tuner was used to check
the power at that point in the line.
In all cases, the tuner would indicate a "flat" match with all
the various settings, so any variation in the output of the
radio should have been small, and the meter after it verified
this.
But the meter on the other side of the tuner could vary

anywhere from about 20% less, to almost unnoticeable
difference, depending on the inductance setting of the tuner.
This test didn't tell me much about the losses using
non resonant loads fed with ladder line, but I suspect that
the loss would still be greatly defendant on the inductance
setting.
I would think the loss would greatly vary just depending
on the load at the moment. Could be high, as if feeding a
half size dipole with a T network tuner, or pretty low with
other longer wire lengths.
I didn't try to worry about the exact loss in numbers, but
I could see the problem cropping up fairly easy if one were
lazy about using the least inductance setting, or if using a
tuner with a tapped coil that was not the optimum setting.
My tuner uses a roller inductor, which lets me tune to
exactly the best spot on the coil, but some tuners tap
and switch the coil position. With some of those, loss
could be more noticeable if it's compromise setting was
way off from optimum.
Another thing I noticed that was it didn't take a whole
lot of extra inductance for the losses to begin to show.
Basically, I found there is only one tuner setting that
will give you fairly low loss in such a case. The one
using the least inductance to get a usable match
for the radio. All the other settings would show quite
a bit more loss, and it didn't take too much more
inductance to start seeing 10-15-20 % decreases in
output from the tuner. And all these settings show
a perfect match to the radio.
But if using the least inductance in such a case, the
meter reading was so close as to almost be the same
vs bypassing the tuner.
So you can use a tuner and have low loss if you
are careful about tuning.
Sure, even 20% won't make much of a difference on
the other end, but I'd prefer not to lose it none the less.
I'm usually on the noisy lower bands, and I rarely run
an amp anymore. That's why I insist on every drop.
In the summer, I usually need every drop.. :/
I also prefer coax anyway just due to the convenience.
But if I run ladder line, I run ladder line the whole way.
I don't like running coax to ladder line. I either use
one or the other.

Probably about the same. In theory you would have
slightly less loss than the coax, but at the lower
frequencies even the coax has very low loss.
So being the losses for both are very low, I don't think
you would be able to see much difference.
Or that's my gut hunch anyway..
Yours would probably be better than the coax if the
run was several hundred feet. At that distance, the
slight difference might begin to show up more.
Also if used at fairly high frequencies, you might
have an advantage. Depends on how good the coax
is how much it would be.

If graphs of current flow is to be generated it must provide a graph
of the lead edge of the current to compare with the trailing edge at
an instant of time, because it is a time varing current.

For a fractional wave antenna skin depth or resistance on the surface
does not disappear until the trailing edge of the RF pulse reaches the
antenna top. In the mean time current rises at the top as the fields
collapse which means that the lead current is prevented from turning
around because skin resistance is still being maintained Thus it has
no other choice to pursue a closed circuit other than travel on the
inside of the radiator and being shielded by the surface eddy currents
produced by the trailing current end.
If by some phenoma the current was able to flow down the outside of
the radiator it must also produce eddy current which thus allows for
radiation from what originaly was a puise to a duallity of current
flow, each of which creating radiation without frequency remaining
constant.
There is no reasonable reason to depart from the closed circuit ideals
to manufacture an incomplete sequence of events not supported by
science but printed in books. Otherwise there will be no progress in
the understanding of radiation until the actions of eddy current or
the weak force is fully understood with its ejection of particles from
diamagnetic materials.
I will not add to this thread as it is surround by closed minds of the
aged.
Have a great day

I think he is laughting at us all, and just seeing what can be gotten away
with.
Nobody with an engineering degree would ever write something like the
following:

"Calculus is based on homogenous materials or planes where you can
refer dy/dx to some thing aproaching zero. In the case of using this
aproach where the antenna diameter aproaches zero this is an invalid
aproach for accuracy but O.K. for aproximations. So much for the
foibles of theoretical mathematics".

Art -
In your perception you have merged my r-f pulse measurement link with
my link to a relevant I.R.E. paper by Gihring & Brown of RCA.

But while both of these links show the existence of reflections, they
can not be combined in any manner to reach the conclusion stated in
your post clip quoted above.

Regardless of that, you continued your post with...

>For a fractional wave antenna skin depth or resistance on the surface
>does not disappear until the trailing edge of the RF pulse reaches the
>antenna top. In the mean time current rises at the top as the fields
>collapse which means that the lead current is prevented from turning

>of the radiator and being shielded by the surface eddy currents
>produced by the trailing current end. etc

Art, consider just the Gihring/Brown measurements linked to earlier in
this thread. They were made using a continuous, non-pulsed r-f
waveform, so none of your beliefs posted above will apply.

Yet the current distribution measured along the lengths of those
radiators by Gihring/Brown proves the existence of reflections from
the end of such radiators, and that such reflected r-f current does
not return from the end of such radiators via a non-radiating path
through the center of the same conductor, as you suppose.

>I will not add to this thread as it is surround by closed minds of the aged.

But not for the reason you state next above, I'd wager.

Frank
You know that the term of dy/dx is absent of metrics unless limits are
applied.
If the object is to measure the plane at hand it obviously must
represent a homogeneous plane
when the limits applied. This was established long before I was born
so it was not I who made it up
Laugh away it is good for you.

David
I see no reference with respect to the ratio between diameters so It
must reflect
solid conductors. If the elements were hollow there could be current
flow within the tube together with skin depth. However, the
communication must be consistent with straight line projectory and
thus the center of the tube would act like a Faraday cage. This is
different to current flow in the center of a solid radiator since
there can be no eddy current within a material of a RF radiator.
Remember, no matter how you read the NEC files equations arrived at
are often approximations since many time portions of equations are
assumed to be negligeable compared to the overall scheme of things and
thus deleted. Do that a few times and it is not known whether the
solutions is a greater or smaller approximation , only a closer
approximation that that created by a planar design. As a U.S.Senator
from Illinois once stated, a dollar here and a millions there and
pretty soon we are talking about real money (Sen Dirksen of Peoria)

Bassackwards as usual.

dy/dy is differentiation, it is integration that has limits.

Your terminology is confusing: "The term of dy/dx". What does "term"
mean? How is it absent of metrics? I assume by "Metrics" you mean
a numeric value. dy/dx implies there is a function: y = f(x), for which
the derivative, f '(x) exists. The calculation of a derivative is trivial,
and assigning a numeric result simply involves substituting in
f ' (x) at x = a. I don't understand what you mean by applying limits
to a derivative. As long as the function is continuous, then the
derivative exists. Are you considering the "Newton Quotient"?
Why is the Newton Quotient relevant, when simple differentiation
methods will achieve the same answer.

What are you measuring in a plane? A plane is represented by a
linear equation in x, y, and z: such as:
a(x - xo)+b(y - yo)+c(z - zo) = 0. The coefficients a, b, and c
are a set of direction numbers of a normal to the plane.
Taking the derivative (dy/dx) of such a function implies a
"Partial" derivative, such that the "z" terms vanish, and you are
left with an equation of a line y = m*x+b, where the solution
is obviously "m". As for the homogeneity of a plane; you are introducing
a 4th dimension. What is the 4th variable? Subject to partial
differentiation
with respect to x; the 4th variable disapears anyway.

Did I get it right? I find the way you explain math is very difficult for
me to follow. Note: I am not laughing at you -- I assume you are
laughing at us who respond.

No Frank I was careless.
When you are determining the area under a curve, the curve has an
equation
When the graph is roughly drawn out you draw a narrow vertical strip

that represents dy/dx
That strip has no specific thickness as it represents a vanishingly thin strip.
If the area represented a cross section of a radiator the thickness of that strip is then a problem.
As a radiator dx could represent the skin depth or it could represent the distance from the surface to the center line and thus the cross section would not be homogenous, same density etc
The problem then becomes what is the true skin depth density in relation to the inner core which allows for the application of the material resistance.
Now I see skin depth as the point that eddy current becomes a contained current circuit without discontinuity. The books define skin depth as a relation of decay which is not how I see things so we have a difference in proving things one way or the other. I then added aunconnected problem by drifting towards integration and limits ie travelling back from integration to the differation format which was a silly mistake for which I have been already reprimanded by the nets monitor who looks out for those things rather than the technical content. I really believe that the answer lays
on Maxwells laws and not with the approximation supplied by Uda/Yagi.
Computor programs say the same thing via the tipping radiator which all deny so there is no possible solution to be arrived at that satisfies all unless somebody provides answers that reflect Maxwell and not Yagi/Uda rather than "I said so" as every thing is known and is in the books that I own. At no time have I taken your postings as mocking or otherwise insincere as you are the only person who used a antenna program in conjuction with my beliefs which shows radiators as not being parallel with the surface of the Earth where others refused to check in any way. As I stated in an earlier posting one must graph the current levels at the top of a radiator by superimposing both graphs where both the leading and trailing currents arrive at the end (time separation of half a period)so that current direction can be determined since in one case there is no eddy current and the other case does have eddy currents(flow resistance) on the surface which thus determines current flow direction at each point.
Best regards
Art

Art wrote:
"For a fractional wave antenna, skin depth or resistance on the surface does not disappear until the trailing edge of the RF pulse reaches rhe antenna top."

Assume an open-circuited whip antenna fed with RF. The leading edge of the first current cycle reaching the antenna tip can continue forward no farther as it abruptly has run out of conducting parh. It must reverse directions on the surface of the conductor as it has no where else to go.

This reversed current is called the reflected current. The reflection is nearly 100%. I forward plus I reflected add to zero at the open circuit because they are about equal in magnitude and opposite in phase, caused by travel in opposite directions.

E forward plus E reflected add to X2 as they are in-phase and of the same magnitude at the open circuit.

Skin-effect causes both currents, forward and reflected, to ride the surface of the conductor.

Atenna RF current encounters more inductance in a onductor`s center than on its surface because there are magnetic force lines inside the conductor as well as outside encircling its current. Lines inside the wire only encircle the current beneath them. The exact center of the wire is encircled by all magnetic lines of force inside and on the surface of the conductor. It therefore poses the most opposition to RF current. It is encircled by lines of magnetic force from currents at all depths in and on a conductor. So, the deeper the current, the more opposition from inductive reactance to its flow, and that`s the way it is.

Best regards, Richard Harrison, KB5WZI

By golly As I stated before you are correct in your own mind
and I have no intention of changing your attitude as you age.
I acknowledge that we differ in our descriptions but until you provide
scientific proof as opposed to your personal opinion it will continue
to remain that way
regardless.

From now on because of our differences I see no need to respond to
your quotes
Nothing personal intended.
Best regards and farewell

This presumes you are seeking a wire that has no current anywhere in its interior. Clearly there is no such conductor as any conduction via electrons (or the charge carrier of holes) must circulate about an atom's nucleus which necessarily imposes an interior current for half the orbit. The only exemption would be unless the conductor is one atom thick where there would be no interior. This would then become a quantum wire which would have problems of its own (called a coulomb blockade). As such a topic is clearly beyond the scope of discussion here, for all practical purposes wire is considered to be a bulk, even for NEC-n and the notion of "end caps" is an artifact of other, external considerations.

>I've tried looking through some of the NEC-2 documentation, but I
>can't find a definitive answer.

NEC-n designers are not interested in anticipating the questions to a vast multitude of speculative scenarios exploring the edges of QED. For instance, modern economics doesn't provide a definitive answer to this question either (economists don't really find those same issues germane either).

* * * * * * * * *

However, this question can be put to any NEC-n modeling package, and an answer provided quickly with some effort - if you are a skilled modeler. Further, the same question AND its NEC-n modeled answer can be weighed at the bench for validity.

At the risk of introducing a practical example that can be tested at the bench (knowing full well how that can tax the practical skills of many arm-chair theorists), let's proceed with a simple experiment.

First, we approach the situation with a radiator that is both hollow AND solid. Yes, a contradiction on the face of it, but explanation will serve. A coax that is terminated at both ends with female BNC connections has those ends capped with male shorting plugs. The net effect is that the "conductor" has two paths, one that is the exterior shield, and one that is the interior conductor. The shield and

conductor are shorted together at both ends. With such a connection, we necessarily have a solid.

We drive the exterior shield with a direct connection. Let's simply make it the vertical radiator against a field of radial ground wires. To all intents and purposes, the coax is a slightly thickish radiator. We can physically measure the current excitation along the length of the exterior path quite simply. When we take the numbers and compare it to the NEC-n model for a vertical radiator of equal thickness against a field of radial wires, we find a very close agreement in results.

NEC-n has been validated in the field.

If we break one of the male shorting caps open to insert a current meter (replacing the shorting cap with the meter inside the coax); then we discover there is no practical current inside the coax along the inner conductor. This should be no mystery as it is a classic expectation of Freshman physical science. {I will note here for the purists that I have explicitly stated no "practical" current. There is no one in this group who could possibly measure the impractical current.}

To create the NEC-n model would require constructing a cage of wires to simulate the shield, implanting an interior conductor to simulate the inner conductor and shorting both ends. This is not a intellectual leap, merely an hour's worth of careful design. I will leave it to someone ELSE who cares about the issue to report the current distribution of that interior wire. A very similar example is already available at:
http://home.comcast.net/~kb7qhc/antennas/verticals/Cage/cage.htm
so complaints of the lack of resources, time, effort, understanding, and the rest are hollow.

Barring reports to the contrary (and speculation counts for naught), NEC-n remains validated in the field. I would like to see that failure demonstrated, but untutored Arthru wholly lacks the skill in the matter, so I won't hold my breath for his demonstration.

Then the only step that remains is to open the interior wire (in either/both the physical real model and/or the model) and take new current distribution numbers. This fully qualifies as an hollow conductor (you can even remove the interior wire entirely to fully qualify to the question).

The question is solved through the model without need for browsing documentation.

If this doesn't serve, then the question wasn't all that important as an issue in the first place. If this is a serious question, then it is a necessary test. Barring reports of enumerated results, it then the question becomes yet another troll. I would note this same test fully quashes Arthru's speculations of interior currents of a

radiator.

No appeals to Gauss, Newton, Maxwell, or Einstein were necessary in the production of this posting as results are self evident to the skilled and naming those dead white scientists are employed only by hucksters trying to validate patents (aka ego certificates).

"------in conjunction with my beliefs which shows radiators as not being parallel with the surface of the Earth where others refused to check in any way."

I`ve erected countless horizontal antennas. They worked as expected.

I agree that the ionosphere scrambles polarizations so that a distant signal may have been launched from either a horizontal or vertical antenna and be received almost as well on an antenna of the other of those polarizations.

Line of sight propagation is different. The same polarization is needed for linearly polarized antennas at both ends of a path. This is experience, not opinion. I`ve experimented with polarization and optimized countless terestrial microwave paths. I found I could aim dish elevations with a carpenter`s level and never improve by trying to adjust for maximum limiter current by refining the polarization adjustment. The antennas were already parallel at both ends of the path.

Tending to cross-polarize line of sight antennas increases path loss.

Some quantum electrodynamics might help. The electrons
in the conductor are the carriers and move hardly at
all at RF frequencies where electrons can be thought of
as vibrating in place, absorbing and emitting photons.

It is those photons that move at the speed of light and
RF photons cannot travel *inside* a conductor. The cloud
of photons in the space surrounding the conductor is the
same thing as Maxwell's RF electromagnetic field which,
as we assume from conventional physics, cannot exist
deep inside a conductor because of skin-effect.

Seems to me the present argument results from the
confusion between DC steady-state which is electron
flow not involving RF photons and RF "steady-state"
which cannot exist without RF photons.

Photons, unlike electrons, do not have a charge and
thus do not repel each other. Any number of photons
can occupy the same volume including forward and
reflected photons which form the standing wave
surrounding the conductor.

Let's say we have two pieces of coax with a 'T'
connector in the middle. If we short the inside
conductor to the outside conductor on both ends
and apply RF, what would we measure at the
center conductor of the 'T' in the middle?

You don't read very well. And you seem a tad hostile.

I stated no "aversion" whatsoever to what are called "non-resonant"
antennas. I said that I'd locate the tuner at the antenna feedpoint. A
transmatch between the radio and the transmission line does little to
make the antenna work better.

CB thinking? You really have issues.

That statement is true for a very lossy system but
not necessarily true for low-loss real-world systems.

Establishing a conjugate match at the antenna feedpoint
makes the antenna work better by allowing maximum
available power transfer to the antenna. A remote
autotuner at the base of the antenna can accomplish
that feat.

There seems to be developing the myth that a tuner
at the shack cannot accomplish that feat. Although
strictly technically true, a low-loss tuner and low-loss
transmission line can come close enough to achieving a
conjugate match at the antenna that almost all of the
available power is transferred to the antenna (if losses
are made negligible by good engineering practice).

It can be proved mathematically that in a lossless
system, a conjugate match is established at the
antenna feedpoint by the tuner located back in the
shack. A near-conjugate match is established in the
case of a low-loss system resulting in near-maximum
available power transfer to the antenna.

Judging from my mobile antenna tinkering, I'd have to
say that is true.
As an example, with a short run of coax that feeds
the antenna, you would think that it would be required
to place the matching device or tuner at the feed point
of the vertical. And strictly speaking, it would be the
best place for it.
But... I've found that you can have very good results
if the tuner is at the radio end of the coax.
In actual operation, there seems to be little difference
in performance.
But the short piece of coax "maybe 10 ft long" is
fairly low loss on the lower HF frequencies.
So it's not a lossless system, but fairly low loss
considering the frequency and short length of
the line.
But if I run a long coax to the same antenna, I
would prefer to keep the tuner at the same place, in
front of the short 10 ft piece, and then run my long
cable from the radio to the tuner, which is still at
the car.
I often did this when using the radio at picnic
tables, tents, while using the mobile antenna on
the car.
My most recent installs on the two trucks place

the matching device at the antenna.
But in my older car I once used, I used the tuner
at the radio end. It was convenient, and let me
fine tune the match while driving.
There seems to be little difference in performance
that I can see using the short fairly low loss pieces
of coax. Not much difference where I place the
tuner. So this tends to back up your theory.

Actually, I read very well.

We are talking on a worldwide forum. Folks that take every single comment personally have missed that point of view and usually react negatively, as you.

If I wanted to raise hell and berate someone, this would be the last usenet group that I would use. Most folks here are scientifically oriented and would be no fun to irritate.

I am interested in two-way radio cultures. I own and use CB radios in addition to my amateur gear. I had my FCC commercial ticket long before encountering CB or ham radio. I was introduced to two-way radio while in the USAF, so my view of the cultures is quite different than many civilian radio cultures. No insult was or is intended.

When I say someone is oriented toward radio in a CB fashion, it is not necessarily an insult. Why would I insult myself?

I may be a bit hostile, that's true. Anyone in the amount of pain that I am in (and there are certainly millions with worse pain than mine) will be a bit short or curt at times. My apologies.

The marketing campaigns for CB gear in the seventies placed emphasis on a 50 ohm match with a resonant antenna. Many CB folks received all of their education in radio via those commercials.

Many hams, especially those that came from CB, would probably faint if they knew that commercial broadcast stations often have an "antenna tuner" at the base of their broadcast antennas. After all, tuners are no good, right? That was one of the points that I was trying to make. Kind of a preemptive strike on my part to reduce the number of complaints about folks running a dipole antenna configuration while using twinlead feedline with a transmatch at the station. I was not picking on you, nor was I trying to show you in a bad light.

Cecil
I wish I could debate with you one on one where there are no snide
remarkes put in place.
Unfortunately my training is as a mechanical engineer where as a ham I
have spread out somewhat into the electrical field and advancing via
the rules of Maxwell and the other masters.
When you move out further with the introduction of protons my eyes
glaze over because I know nothing of such things.

Now this discussion started off with Gauss laws on statics with me
which finally lead to a antenna program that vindicated my stance. It
was the Gaussian aproach that has produced the endless discussion. So
let us put the problem on its head and start with the computer
programs and work backwards. There are two types of antenna
programs.The first type is EZNEC that applies mathematics to pre
designed scenarious which via experience with the books revolve around
planar designes to which it will supply an aswer that one would expect
again via experience from the books and the user is very happy. The
other style of program is an extension of the first where the program
is empowered to modify input dimensions such that the input moves
towards a radiator
that meets the intention of Maxwells laws in their entirety. I use the
latter program where as non of the group will use this type favoring
the basic EZNEC program It is now where we find that it is the details
of the two programs come into evidence. Hams by virtue of their
knowledge and readings
WILL insert a planar design to find the resulting characteristics. On
the other hand I just insert a handfull of numbers and ask the program
to rearrange inserted figures to obtain a certain gain e.t.c.
I can do this as I know that the program based on Maxwells laws will
pursue a line for the best array that meets my request. Now this group
owning only the EZNEC will always insert for a vertical antenna a
design that is at right angles to earth with a specific length of
radiator just like the books they have and it will provide an answer
that the books would expect.
I on the other hand being a mechanical engineer use a program that is
known to reflect the laws of the masters thus it is natural for be to
insert various numbers with no real meaning and leave it to the
experts to rearrange it for the best orientation to meet my request.
So How do these approaches differ.
The group using the EZNEC style of program will input a vertical
antenna at right angles to the Earth wich follows conventional
thinking
I as a mechanical engineer does not assume anything and thus provides
the problem to the program to unravel ie. the numbers provided are
random with respect to orientation.
The results provided is always a vertical that is tipped away from
right angles with respect to Earth.
This presents a paradox two programs providing different results.
Those using the planar aproach and using EZNEC get an orientation that
one sees in the books where-as.....
my program which has an optimiser (the ability to change orientation
in line with Maxwells laws)
provides a orientation of a vertical that is tipped sand supplies
superior results to that of a planar design which it always over rules
in it search for best results.
So the problem is not that the eddy current creats the tipping.
The problem is that a program exists that supplies orientations that
are contrary to those that are generaly in the books used as

tutorial's. Thus the question is a very simple one.
On what grounds can we accept one program that supplies responses that are not accounted for in tutorial books? One program supplies solutions that exceed the values supplied by the other,
yet the other program when supplied with the final orientation of an array or radiator that one program supplied will then show AGREEMENT with the other program?
Now my reversion to first principles produces disagreement even tho an alternative approach is not supplied. So as a mechanical engineer I give the problem to the experts to which there is silence
and an unwilliness to change to an open mind.
So Cecil I presented the facts what two different antenna programs used in the amateur antenna world supplies and ask, why should I NOT trust programs that utelize an optimizer aproach based on the laws of Maxwell and favor a program that use orientations that present tutorial books supply? A simple question unimpaired by the theories of particles etc which seems to be a source of annoyance.

My sincere regards
Art Unwin.....KB9MZ.....xg

Antenna programs are tools. Their product qualities depend on user ability as much as upon the tool. Any program telling you to tilt the tower is wrong for one reason or another. Were that so, after a century of broadcasting there would be such transmitters and there aren`t.

Particles and EM waves are compatible. I recommend "Electromagnetism and the Sacred" by Lawrence W. Fagg, ISBN 0-8264-1147-9, which reconciles QED (Quantum Electromagnetism) and EMI (Electromagnetic Interaction).

Fagg also informs of the Four Forces of Nature. Art said we must account for "The Weak Force" in our determination, but never said which weak force he meant.

Fagg says on page 27:
"The strongest of the forces is the nuclear force, which, for example, keeps the quarks (the most elementary particles that are subject to the nuclear force) together in clumps of three to form protons and neutrons, and, in turn, keeps protons and neutrons together in the neucleus of an atom. Next in order of strength is the electromagnetic force, which is the fundamental mechanism that makes possible the operation of all living things including ourselves and most of the material world to which we relate. The third is known as the weak force, which comes into play in the radioactive decay of a nucleus and many other elementary particle phenomena. By far the weakest of the four is gravity.

I won`t bore with more. Read the book.

Best regards, Richard Harrison, KB5WZI

> the car.

When the SWR is not 1:1 but is of a reasonable value:
A short coax run is usually low-loss. A long coax run
is usually not low-loss. When the tuner is located at
the transmitter, the near-conjugate match at the
antenna can only be achieved in a low-loss system.
Open-wire HF transmission line systems are usually
low-loss systems.

Richard you can read therefore you know what the question is. It is
very simple and it is related solely to antenna computor programs that
are used presently around the World. It is understanderble because of
your advanced age you avoid the use of computer. I have no problem
with regard to the proof that you can read but it is not relevent to

the question which you make every effort to avoid. You can venture to answer the question again based on your computer knoweledge but the question is based on the veracity of computer antenna programs in use today and nothing else as the Gaussian aproach appeared to be confusing. So it makes no use to quote books at this time because I agree to disagree whith comments based on the Gaussian aproach.
It is for that reason the question is now simplified where it only encompasing computer programs

Supposing that Art means: Does NEC-2 model wires as solid or hollow?

It makes no difference. Skin effect makes a hollow wire appear to be
solid.

Computer programs successfully predict antenna performance so they are
in demand the world over as Art noted. They make the tedious easy.

hi.
i have a transmitter about 150 watt (output an 813 tube 1400vdc) at
1431khz (salonika greece) and the antenna that i'm using is an inverted
L antenna (with a less than 5l/16 length ,about 20m vertical segment and
40m horizontal segment). the coupler that i'm using now is l-type . at
http://www.geocities.com/tzitzikas_ee/antenna.gif you can see a
schematic of my coupler.
i would like to improve the efficiency of my antenna.
i would like to ask you which inverted L lenght is better for stronger
local signals:
1/2, 3/8, 5/16, 5/8 or 1/2 wavelenght? thanks

NEC shows this for a theoretically perfect 1/4-wave vertical monopole system:

Frequency = 3.9 MHz
Conductivity = 5 mS/m
Applied Power = 100 watts

Groundwave Field at 10 miles = 31.7 µV/m
Groundwave Field at 20 miles = 14 µV/m

RF

Here is an old file I picked up about 10 years ago. I was not the one that received the info from Celwave, but just copied off the internet for information.

****

Antenna Painting Instructions

The following is courtesy Celwave This is what I received when I asked

them for a recommendation of what to use in refinishing my 18 year old

PD455

Celwave receives requests for advice about refinishing weathered antenna radomes or changing the radome color for aesthetic

reasons. We do not take a position on any manufacturer's paint. However, Sherwin-Williams seems to make a product, which

should be compatible with radomes and not interfere with the antenna's electrical performance. The following suggestions are

not a substitute for detailed instructions and mix ratios provided by the paint manufacturer.

RADOME MATERIAL (Standard Color)

CELWAVE PRODUCT LINE

1. Spun Epoxy Fiberglass (Blue)

Penetrator Antennas (AxR, BxR
Series)

2. Polyester Impregnated Fiberglass (White)

Stationmaster Antennas (PDxx Omni
Series.)

3. Polyester Impregnated Fiberglass (Grey)

FR CELlite Panel Antennas (AP18, 19
Series)

4. ASA (Grey)

FR CELlite Panel Antennas (AP90
Series)

5. AES/ABS (White or Grey)

US Panel Antennas (Other APxx
Models)

6. Gel Coated Fiberglass Tubing (White)

Marine Antennas (Cel-1, 3 etc.)

Notes:

FOR RADOME

MATERIAL

USE THIS FINISH

#1, #2, #3

Primer and Top Coat

#4, #5

Primer may be required ----

(Top Coat retention may be tested with adhesive tape after
paint dries)

#6

Requires Pre-Treat (Acid Etch) to remove gloss, then Primer
and Top Coat

SHERWIN-WILLIAMS PRODUCTS:

Etch

P60G2 "Wash Primer"

Primer

D61H75 "Polane 2.8 Plus Spray Fil"

Top Coat

Polane Type "HS 2.8 Plus Polyurethane"

SURFACE PREPARATION:

Removal of surface contamination is normally accomplished by using an alcohol solvent, ethanol, propanol, isopropanol, or

butanol. A ten percent solution of methyl ethyl ketone in water can also be used whenever stubborn oil or grease is

encountered.

APPLICATION PROCEDURES:

Painting to be done indoors, as the uncured product is sensitive to moisture. Apply one coat of Polane 2.8 Plus Spray Fil

D61H75 Primer. It is designed to fill and/or hide profile and surface imperfections on metal castings, structural foam, plastic and

wood. Apply one coat of Polane HS 2.8 Plus Polyurethane Enamel Monochromatic Intermix Color System F63 Series.

I need to correct the values I posted earlier. I mis-read the larger
table I had constructed, which was apparent when calculating the
values for a ~200 degree vertical.

Frequency = 3.9 MHz
Conductivity = 5 mS/m
Applied Power = 100 watts

Groundwave Field at 10 miles = 131 µV/m (Correction)
Groundwave Field at 20 miles = 31.7 µV/m (Correction)

> Wouldn't a 200 degree vertical work better?

Yes, by a little over 2 dB (other things equal).

Groundwave Field at 10 miles = 167 µV/m
Groundwave Field at 20 miles = 41 µV/m

RF

I don't work the low bands enough , but I would have thought someone would have just gave some prctical experiance instead of all the NEC stuff. Not many hams are going to put up a 60 some foot vertical and the required ground system for 80 meters.

Could not someone say that with horizontal dipoles about 30 feet up (or whatever is being used) you may get so many miles ground wave and during the day so many miles skywave and so many more at night ?

NEC and other programs are fine for predicting the coverage, but it does not take into account all the variatables that can be answered by the experiance of actual operations.

hi

Just wondering a few things

I see the center pin on a typical N connector is pretty small

How much power could it hold at HF and also uhf/vhf
frequencies? Assuming a modern day high quality N connector??

The other thing i pondered is that it seems the don't make
Pl259/so239 connectors for hardline, so what do guys use typically for
higher power DIN?

thanks

The only way to improve efficiency is to improve the ground
radial system.
With the exception of current distribution possibly effecting
efficiency, which again actually leads back to ground loss
around the base of the antenna, changing the length of the
radiator only effects the pattern.
And being you are transmitting to locals using ground or
space wave, you want the polarization to be as purely vertical
as possible. So unless you can erect the longer length radiators
as verticals, using the longer lengths would probably hurt you
rather than help. You will have more radiation from the
horizontal section of the radiator, which is not what you want.
As far as the radiator, one of the best ones to use has already
been mentioned. The "T" vertical. You want to use a balanced
top hat, or wires, so that the radiation from the horizontal sections
cancels out. That will leave you with a mostly vertical polarization.
So it sounds like the me the best radiator is the longest vertical
wire you can erect, with a T horizontal section, not as an Inv L.
Once you do that, the only way to improve efficiency is to add
more ground radials.
The longer length radiators will only help your case if they are
fully vertical. A short vertical section with the rest horizontal is
going to hurt you, not help. Well, unless you are working NVIS..
But this is not the case operating a local MW station to other
locals.

That's OK, not many hams read these threads either. They fully expect
they are doing their best, and certainly their experience proves it.

>Could not someone say that with horizontal dipoles about 30 feet up (or
>whatever is being used) you may get so many miles ground wave and during
>the day so many miles skywave and so many more at night ?

Those same Hams that don't read these threads, and don't build 60+
foot radiators with elaborate ground systems don't realize that
horizontal antennas don't have ground waves anyway. So what coverage
they do get is perfect and they probably got an ARRL award for
horizontal antenna ground wave WAC already when they sent in the
box-top of their favorite breakfast.

>NEC and other programs are fine for predicting the coverage, but it does not
>take into account all the variatables that can be answered by the
>experiance of actual operations.

NEC doesn't predict coverage, it is an antenna modeler, not a
propagation modeler (which would fit into your "other programs"). That
aside, these programs account for more variables than imagined by
those Hams that don't read these threads and don't build 60+ foot
radiators with elaborate ground systems. They have already had the
experience of actual operations and nothing is better than that.

So, why are we writing about those experienced, award winning Hams who
don't read these threads, expect ground wave from their horizontal
antenna, couldn't list more than one variatable and are satisfied with
sub-par to mediocre performance?

You appear to be confused with the defininition of the integral. You simply integrate the function over the desired range, and should not be concerned with irrelevant concepts, such as strip widths.

>If the area represented a cross section of a radiator the thickness of
>that strip is then a problem.

No such strip exists in integration.

>As a radiator dx could represent the skin depth or it could represent
>the distance from the surface to the center line and thus the cross

Not so; "dx" simply refers to the independant variable to be integrated. Note the first example of a "Reimann integral" at:
http://mathworld.wolfram.com/Integral.html

>section would not be homogenous, same density etc
>The problem then becomes what is the true skin depth density in
>relation to the inner core which allows for the application of the
>material resistance.

To determine the RF resistance of a conductor requires a solution involving "Kelvin/Thompson" functions; which are modified Bessel functions with a complex argument. See the following for details:
http://www.st-andrews.ac.uk/~www_pa/Scots_Guide/audio/skineffect/page1.html
Also:
http://mathworld.wolfram.com/Bei.html
http://mathworld.wolfram.com/Ber.html

>Now I see skin depth as the point that eddy current becomes a
>contained current circuit without discontinuity. The books define skin
>depth as a relation of decay which is not how I see things so we have

Ansoft's (www.ansoft.com) "Maxwell" is a "Finite Element Modeling" (FEM) program which, among other things, can accurately produce a graphical representation of the current distribution in a cylindrical conductor. See examples at:

http://www3.telus.net/nighttrainexpress/skin%20depth.htm
These graphs are reproduced from an article in the November/December
issue of QEX magazine, pp20 - 29, by Rudy Severns, N6LF.

Sorry, I don't mean to be insulting, but I am baffled how you can
have such problems with elementary math; yet argue about
concepts taught in a third year electrical engineering degree
program with prerequisites in advanced calculus, partial differential
equations, and more.

>I really believe that the answer lays on Maxwells laws and not with
>the approximation supplied by Uda/Yagi.

>not being parallel with the surface of the Earth where others refused
>to check in any way.

Many hams interested in low frequency DX use sloping (monopole) radiators,
which gives a slight improvement in low angle radiation.

>As I stated in an earlier posting one must graph

Frank
I understand that you are baffled. I retired early from GE with a
heart attack which was then followed by a series of operations before
I again had a open heart op with 5 bypasses plus
and a few other side problems. My first heart attack to my memory
away, could not even read beyond one line. So I focussed on antennas
to keep myself alive and to reroute my brain.
With my tunnel vision retraining over the last decade plus I regained
a tunnel type memory where I focussed solely on antennas. With my
present project I have had to retrain in various aspect which required
leapfrogg some of the basics but with ten plus years of work, 3 steps
forward and two steps back I now consider myself something of an
expert on a subject which is long and deep but narrow in span. On my
antenna concept I am absolutely sure regarding what I have found, even
sought confirming examination but when I venture off channel with
respect to this group I go wonky
I believe that because of the latter my credibility suffers when I
communicate which energises a trend to insult rather than to take an
effort to follow what I have done and rechecked an unknown amount of
times over the years. Thus with the concept that all is known and if I
am correct it would have been done 100 years ago rises to the top
while ignoring things from my side that I have to
learn and review everything from first principles while using the
tools of today.
The first patent has been printed and will soon b e reviewed which
also includes a description from the times of Gauss. I look forward
to that time as it will pull into the open my discoveries.
In the mean time I will contunue to make my point on the newsgroup.
Main problem is that many have a antenna program but it apears none
have the more expensive optimizer and none have used the free versions
that are available. So the proof provided by NEC2 and 4 and mininec
is beyond this groups ability to come to grips with. The bottom line

is all povide the superior results
of tilted antennas thus the descision has to be made that all programs
are totally in error or all are
satisfactor descision that this group is not equipped to address. If
you want to follow my line of thinking because of my lapses into the
wonky side you can always use E mail rather than subject yourself to
the whims of the group. The bottom line of all this is that a
directional antenna for 160 metres is now available to which all hams
are anxious to avoid at all costs or to debunk all thoughts of
acceptance as all is known.
Best regards
Art

> Sorry, but you lost me again.

FRANK
When the leading edge of the half cycle reaches the open end of the
antenna the descision has to be made with the direction of movement.
Tradition is that current flows in a closed loop thus the descision is
between two or three routes
1 Capacitive coupling to ground as shown in some books to complete a
circuit
2 Turn around by ducking under the skin of the radiator to complete a

closed circuit
3 Invent a open circuit current flow which by turning around confronts its own tail which is producing
the eddy current resistance in the skin as it is yet to reach the end of the radiator.
From my point of view the leading edge cannot continue radiating or it will become a full size radiator. The material under the skin depth is an extremely low resistance path which cannot support the formation of eddy current as it has no access to a dialectric (air). This descision
also will not stray from the closed circuit traditions.
Now for the final eye popper, If a radiator is not in equilibrium there is a literal current flow on the outside which by the standard laws requires a literal current flow in the opposite direction.
Prior to the discovery of the eddy current users placed the return current in the air which prevented true understanding of radiation by using this flow as justification for radiation being produced by waves which was then extrapolated to prove that light was a matter of waves.
What I am asking for is a acceptance of particles at rest from the sun as being the true transportation of radiation which aligns directly with the suns rotation and the use of levitation of the particles from diamagnetic materials such as aluminum correr etc which cannot retain magnetism in the same proven methos used around the World when sorting and separating
materials in all the scrapyards,.As far as acceptance of particles emminating from nuclear burning of the sun in line with a cycle and their high density presence on Earth with the affinity for atraction for diamagnetic materials that has been accepted fully in the last few years in many reseach labs
in many diffgerent countries except....except... on this newsgroup

At higher frequencies and/or long runs the RG8 is a poor choice.

No
It depends on the power or current taken by the hysteresis which
limits
the displacement current/field generation. Without this generated
field
there is no displacement of diamagnetic materials, it is a very weak
force
even in ideal conditions. On the other hand it is possible that any
coating aplication
will do all the work that is required

Art: Whether or not a radiator meets your definition of
"equilibrium," the r-f current flow along it ALWAYS falls to ~zero at
its unterminated end(s). It MUST do so, as no real, physical path to
conduct r-f current.exists beyond such a limit.

The near-total reflection of such current results in the standing wave
patterns seen in the plots linked below.

This link also shows that the reflected current travels along the
outside of the conductor. If it did not, it would NOT result in these
current distributions carefully measured by Gihring and Brown over 70
years ago, and which you continue to spurn.

so even a coating that is not diamagnetic will levitate your magical jumping
neutrinos? why would they even light on my ferromagnetic antennas?? and
why would the ferromagnetic ones work better than diamagnetic ones?? can't
stand to see real world data??? well, this is it. ferromagnetic antennas DO
work, and they work very well... so your magical levitating solar
diamagnetic neutrino theory is a bunch of bull. oh, and unless i have
missed a measurement here and there, reflected currents from the ends of
antennas DO flow on the outside of the conductor and are very measurable....
i do it all the time... so stuff that up your pipe and smoke it!

RF just look at what you have written and I suppose shouted in
response to my post

I gave the reasons for my line of thinking having gone thru the
routine of reading and accepting
what the books say.
You spurned my statement giving no reason why it should not be
accepted
Not surprising really as that is the pattern of this group.
Before that I raised the question that if antenna programs all agreed
on the sloping radiator as being the best is that a reason on which I
can declare programs as proof as what I do.
Yup, no answers either because I was spurned or nobody is familiar
with the programs to supply an answer.
Now you throw at me the books together with some sort of abstract and
demand that I should fall in line with everybody else. Well once apon
a time I was a lemming and believed all that was in print.
Now I am examining everything, point by point for my own satisfaction
and coming up with different solutions. Yes I am well aware of the
books that are thrown at me and now I am thinking for myself
which if anybody is going to progress all must do. For that you object
because apparently your request comes first in your mind. Now look at
what you wrote again in a logical fashion and then retire to the
outhouse and think about the rationalisation of the modes of progress
that I supplied
and you state why some would be rejected and why together why
something totally trumps what I stated or answer the question on
antenna computer programs.
On the other hand if you have a question start a new thread !

The basic problem is that there isn't a simple answer to your question.
Any simple answer you'd get would be wrong much or most of the time.

It's safe to say that you won't get any ground wave communication at all
with a horizontal antenna, unless a vertical feedline is radiating. The
range with a vertical antenna depends on the noise level, which changes
day to day, season to season, and day to night, as well as ground
conductivity and power level. The ARRL Antenna Book gives a "typical"
ground wave range of around 60 miles at 3.5 MHz, but of course this
depends on the factors I've mentioned, among others -- it's one of those
"simple" answers.

Sky wave communication range depends on the condition of the ionosphere.
Sometimes you'll be able to communicate hundreds of miles, sometimes
zero. There is no range you can depend on. If you're interested in the
performance of a low dipole on 80 meters, I highly recommend _Near
Vertical Incidence Skywave Communication_ by Fiedler and Farmer.

> NEC and other programs are fine for predicting the coverage, but it does not
> take into account all the variatables that can be answered by the
> experiance of actual operations.

Unfortunately, experience doesn't take into account all the variables
either. No one or group of people have experience with all possible
antennas, ground conditions, ionospheric conditions, and noise levels,
so one person's experience is likely to be different from another's.
The value of modeling is that it allows you to see which factors are
important and in what way, so you can get a better idea of what
performance you might get under your particular set of circumstances --
rather than someone else's.

ML-

I would expect hardline manufacturers to use a standard connector intended for the power and frequency involved, but designed to fit the end of their cable.

When hardline is chosen because of low loss rather than needing high power, it is often used for long runs with a short flexible cable at the end to connect to equipment. In this application, use of type N connectors is common, with a female connector custom made to fit the hardline.

You can get adapters for PL259/SO239, but those are lousy connectors for RF. Their impedance is not constant from one end to the other!

What I use on 7/8 hardline is a copper reducer with a barrel connecter
soldered
into one end and then I screw the combination over the hard line. Now
you have an output from the hardline that can fit most things . One
time I filled the copper reducer with dielectric before I inserted the
barrel connecter but could see no difference using max power.
Certainly a lot cheaper
than Andrews connectors and if the coax route is not ideal it is easy
and inexpensive to add flexible lengths at tight corners, such as
emerging from underground piping. Hardline gets extremely rigid and
the outer insulation is subject to cracking in the winter time which
is when I seem to have to work on things.

I used to be good at this stuff, Cecil, but that was long ago.

The only balun that has worked with any success so far has been the built-in balun (4:1 allegedly) in my MFJ-989C. That I can get to work. When hooking up other baluns and using the coax output on my tuner, none of the other baluns work worth a hoot with one exception. I have an LDG 1:1 200 watt balun that will tune my Van Gordon All Bander from one end to the other of the HF spectrum, using just the internal tuner of my Yaesu FT-890AT. Go figure.

I used to be a fairly sharp cookie at this stuff, but those days are in the past. Got a serious case of "brick brain syndrome", if you know what I mean?

To my way of thinking (which is probably incorrect), using the 4:1 balun would broaden the impedances that I could match versus the 1:1 balun. What you are saying is just the opposite. Please elaborate. I will be most grateful.

Not so, Art.

The simplest reason that you should abandon your line of thinking about there being no current reflection from the unterminated end along the outside of all radiators is that such beliefs were proven invalid by the measured results of Gihring and Brown over 70 years ago -- as shown in the excerpt of their IRE paper which has been linked to twice, now.

the more it gets quoted the more he will consider it lemming talk and reject
it. art is in his own little world now, full of magical levitating
diamagnetic neutrinos and burrowing anti-eddy currents up the middle of
conductors... of course, where those currents go when they reach the
feedpoint would be an interesting thing to hear, maybe art can comment on
that for a while... they probably just jump up to the surface again and go
around in circles.

If this is the 80m dipole with 100' of ladder-line, one
can look at my notuner all-band-HF antenna to see why
100' is a good fixed length for the ladder-line. 100'
is near a current maximum point (loop) on all HF bands.
If one varies the length of the ladder-line from 90' to
115', one doesn't even need a tuner and a 1:1 current-
balun-choke is ideal.

A 4:1 balun is a very good transformer over a narrow range.
Most are voltage baluns that do not balance currents and
therefore do little to discourage common-mode currents. Test
a balun looking into 2000+j2000 and see what happens. One
of my 4:1 baluns got so hot I couldn't touch the case. The
best balun design, IMO, is one where flux in the ferrite
is caused only by common-mode current and not by
differential-mode current.

Here's some useful information:

Actually, photons are easier to understand than Maxwell's
equations. Maybe it would help if you researched the
ability of electron carriers to absorb and/or emit
photons plus the physical characteristics of electrons
and photons. Wikipedia has fairly good sections on
these two elementary particles.

Cecil, I try to read all sides but the botton line is that
communication is definitely linked to the Sun.
Also It is known that antennas are made from diagmagnetic material and
the expansion of Gaussian law implies the presence of particles.
The books support Maxwells equations to its limits and none of the
above violate those same principles when based on mathematics. I
understand that words like photon and quarks are parotted around and
it may be correct but I have no indication of what their reaction is
with respect
to a rejection force of diamagnetic materials. If it was proven that a
particle from the sun when resting on a diagmagnetic surface loses its
original qualities via a radical change in the particle itself then I
would be forced to consider it. But that is only a theory that is not
backed up by known facts. That is why I turn the subject on its head
when I turn to computer programs which are a fact of life and in use.
Thus the question is reduced from these other aproaches by asking the
question,
why do antenna programs agree that a vertical antenna must be tilted
for best results? Forget the theoretical routes that current takes and
also the presence of particles I have brought the question
of antennas to the level of every body. There is the Eznec program
available to all so all can tackle this paradox for themselves very,
very simply. Input a vertical full wave antenna at various angles in a
resonant form and see what angle is best. Simple oh so simple. No
arguements, no disputes, no presentation of selected articles just a
simple personal homework assignment which is very specific to which

there is only one answer. for say vertical radiation.
No, it is not in the books so it has to be YOUR findings as in
homework
When the answers come back I will place an answer on my page that is
acceptable to all programs in existance. If you have a program with an
optimiser then the project takes less that 5 minuits.
If you use your own programs it will take longer after which you will
be confident of the answer you arrive at. It is very cold outside so
you really have nothing better to do than to shut Art's mouth up once
and for all with a fact that is inescapable of escape from, one that
satisfies all.
Vertical full wave antenna, frequency 14.00Mhz ,diameter 1 inch

Cecil
To provide a specific answer to your post that photons must be part of
a
phenomina that I propose. I cannot implant the photon such that it
makes my stance more credible. I would consider you a hero if YOU show
how a photon
fits in with radiation in accordance with Maxwells laws
.....
The books state that a photon is a particle without mass.
It comes about by separation from a particle by a different name it
never the less a particle with mass.
The photon as a particle cannot be a wave since its extremities cannot
be determines as with a particle.

If a photon has no mass it cannot have spin which is reliant on
Newtons laws
which requires a circular force around a central point of mass itself.
Since it is now proven that Neutrinos do have mass as a particle in
the last few years the massless state of a photon must come under
question.
So why procede into dividing particles into those with mass and those
without mass when all can agree that they are indeed particles which
may or may not change its constituents at some time and at some place
that cannot be determined where as the particle from the sun named
Neutrinos is accepted as a particle with mass and that has a presence
here on Earth?
Because this is a known fact I prefer at this time not to challenge in
favor of a theory. That is my logic which I pursue which is a
plausable explanation of levitation in use and visible in industry
around the World and has the mathematical authenticity of Maxwell laws
Best regards
So is it not better

Nope
You have the solution in your own hands where you have total control
if you are able to use a antenna computer program.Many on this group
```

have an aversion to computers and thus rely on other means which puts control
in book authors. If you have a similar aversion thats O.K.
For those who can use a computer they can determine for themselves if antenna programs can be trusted or not. The exercise is totally in their hands where they can manipulate the rules in any way
when using these programs. If it works out that this group cannot cope with computers then the solution will not surface and thus reliance of the truth resides some where else and not in their hands.
Simple, simple simple

What antenna programs are you describing, and for what parameters do
you think they show this?

Instead of stating your claim about "tilt" and then trying to coerce
others to prove you are wrong, why not take the initiative to try to
prove you are right?

yeah, right... i am an author, and i also use computers, where does that put me? EVERYONE on this group must use a computer... kind of hard to use newsgroups like this without a computer.

>For those who can use a computer they can determine for themselves if
>antenna programs can be trusted or not.

no they can't... not unless they have a sophisticated test setup to do fill size models and measurements to compare predicted with actual results. YOU don't even have that art, so how can you be so sure that the programs are doing what you think they are doing?

I could do that but you will only accept what you yourself can prove
by your own means.
I said I would provide what you are asking for so you have control of
the solution i.e
my solution is or is not the same as your own
What you are proposing is nothing more than a way out to prevent a
solution
If you cannot operate a computer then that aproach has no standing
with you or myself
So now we are back to a word war on facts which are indeterminate.
When you do it for yourself you can voutch for all steps taken by you
that proves your point.
Self reliance instead of default

No, I accept the work of Kraus, Terman, Balanis etc and the
experimental work of George Brown et al as they have written and
proven it.

The undocumented statements of Art Unwin I do not.

But for your edification, Art, below is a link to what NEC shows for a
full-wave, base-fed vertical monopole over a perfect ground plane.

Note that it has zero gain in the horizontal plane, and about 6.7 dBi
gain at an elevation angle of 37 degrees. So yes, tilting the
radiator would increase gain in the horizontal plane, by varying
amounts depending on azimuth (two azimuths would still be zero)..

Is this the basis for your claim? If so, why would anyone install
such a thing, as more than that peak gain in the horizontal plane is
supplied by a cheaper, shorter VERTICAL monopole of about 0.6
wavelengths.

If this model is not what you have in mind then please completely
define your radiator (including how it is fed and its relation to the
ground plane), and your meaning of "best results" due to tilting it.

Very good. But Richard Harrison does not have a computer thus he
relies on books.
I'd venture to say that many have books as well as computers but have
not used the canned antenna programs. After all cobol, basic, extra
basic, fortran e.t.c are outside of their sphere!
With that aside your answer questions the veracity of antenna computer
programs
in the hands of the average ham. That may or may not be true
But the members of this group percieve themselves as experts with
respect to antennas and I have no doubt that all will arrive at the
correct answer individually and that includes yourself
As for being sure of the result obtained no one can arrive at the
correctness unless they themselves revert to first principles to
determine the confines of what is acceptable.
On the other hand one can rely on the fact that the approximations
provided by computers aligns with your own experiences. Either way to
find the solution is totally in your hands, your own choice
in how to determine the veracity of antenna computer programs without
placing trust in unknowing
hands.

Is that clear and technical enough for you or has your descision on
antenna programs already been made and irreversable?
Art

Source record: 18304

> I see the center pin on a typical N connector is pretty small
>
> How much power could it hold at HF and also uhf/vhf
> frequencies? Assuming a modern day high quality N connector??

The power handling capability of a connector is determined by both its voltage limit and its current limit, whichever of the two is more constraining.

The N connector voltage limit is usually stated to be 500V (peak), corresponding to an RF power of 2,500W over 50-Ohm impedance. Please note that the 500V limit applies to the extreme environmental and conditions (e.g. temperature, humidity) so, for a normal usage, the connector would well withstand more than 500V.

Conversely, I was never able to find a specification for the N connector current limit. This will actually depend on the usage conditions, i.e. whether a round.the-clock broadcast service, or an intermittent amateur service. With a power of 2,500W, the rms current through the connector would be about 7A (at 50 Ohm), a value that, given the size of the inner pin, I would consider well tolerable for amateur service. For a broadcast service instead it would perhaps be safe not to exceed 1,000W at VHF, or somewhat less at UHF.

> The other thing i pondered is that it seems the don't make
> Pl259/so239 connectors for hardline, so what do guys use typically for
> higher power DIN?

The PL259 connectors are low-cost connectors that are simply unknown in the professional world. Main reasons are:
- they do not offer a controlled impedance across the connector length
- they are not sealed, and hence offering no protection against humidity
- the ground connection is unsafe. If the connector does not remain well tigthened under all operational conditions, one can never be sure on the continuity of the ground path.

For hardlines there is a good choice of connectors, see
http://www.surplussales.com/connectors /HardLConnIndex.html

I am in the process of making a 1:1 balun for QRP use and this has made me think! I have seen many balun designs and construction articles. A fair proportion of theses advocate twisting the wires before winding on a toroid core. I have never seen a clear explanation as to why they are twisted. Does it improve the balance? Does it affect the coupling? Is it better to twist or not to twist - that is the question.

"What I use on 7/8 hardline is a copper reducer with a barrel connecter soldered into one end and then I screw the combination over the hard line. Now you have an output from the hardline that can fit most things . One time I filled the copper reducer with dielectric before I inserted the barrel connecter but could see no difference using max power. Certainly a lot cheaper than Andrews connectors and if the coax route is not ideal it is easy and inexpensive to add flexible lengths at tight corners, such as emerging from underground piping. Hardline gets extremely rigid and the outer insulation is subject to cracking in the winter time which is when I seem to have to work on things."

Just remember that the aluminum to copper galvanic couple promotes the corrosion of the aluminum. Keep the contact areas as dry as possible if you don't want problems. I have found that wrapping several layers of tightly stretched vinyl electrical tape and then spraying the area with clear Kryloni¿½ acrylic varnish does a reasonable job. But since water vapor can diffuse through the tape, you will need to check the connection periodically.

The 4:1 balun in the 989c is not a voltage balun. It's fairly
hefty current balun wound on a big toroid.
I've used the same one when I'm using mine for ladder line.

I got my 989c free because of heat damage. But it was
fried coil forms, rather than the balun.
I tediously repaired the coil, and have been using it ever
since. The coil in it is actually the second one.
The guy burned up two of them, and finally decided
to buy a big Nye Viking, and gave me the 989c as
junk trash.
But he abused the tuner by trying to run a 1/2 size
dipole on 75m, and also running a 8877.. :/
Not a good idea when using a T network tuner..
I guess the Nye Viking was a bit stouter, as I
don't recall him killing it. But I bet even it got a
bit toasty at times. :(
Anyway, being he never managed to kill one of
the baluns with his torture tests, I imagine they
are fairly stout. It is a "3 KW" tuner.. wink,wink.. :/

Yeah, it's a 3kw tuner when the SWR is 1:1. Lots of folks don't understand that at all.

I don't mean to sound like a smart ass, but all of the techno-babble (which I too have memorized) such as current balun - voltage balun - blah-blah-blah, does not help me do what I am trying to do. I've read all of that a thousand times at least, memorized it, passed tests on the fundamentals, etc. It doesn't apply directly in this instance.

I'm looking for a way to multiply the range of impedances that can be matched.

Yeah, I know. This is not in the handbooks, but it is what I'm trying to do. And, it has been done with the MFJ-989C balun, so I know that it CAN be done.

Don't believe me? Operate the 989C direct from a coaxial output into an external balun and then run it through the wire output which has the alleged 4:1 balun in line. The difference in the loads that can be matched is astounding.

Problem is, I can no longer enjoyably tune the MFJ-989C due to arthritis. I am looking for a balun that will multiply the impedances that can be matched so that I can use my MFJ and LDG high power autotuners. The stock baluns I have used do not provide this ability with these autotuners. Nor can they be equalled using the MFJ-989C straight thru, without the internal balun in line. Pardon me if I'm repeating myself. Need sleep.

What doesn't help is that I'm only using about half of the 100' of 450 ohm twinlead feedline that came with my Van Gordon All Bander. I just have no other way to lengthen it, so I'm stuck using almost fifty feet of the twinlead. I'm sure this compounds the problems that I am having.

On top of all of that, I want to be able to run about 600 watts output from my amplifiers (one upstairs/one downstairs). Any thoughts/ideas would be appreciated. I have thought of going with a fan dipole, but that will reduce my operating bands by nearly one half.

I fully understand that.But curiousity surely must creep in if there
is a suggestion that the antenna programs do not agree totally with
the books by straying towards tilted radiators. Which is correct one
might ask!

>
> But for your edification, Art, below is a link to what NEC shows for a

Very good, you do have a vestige of curiousity

>
> Note that it has zero gain in the horizontal plane, and about 6.7 dBi
> gain at an elevation angle of 37 degrees. So yes, tilting the
> radiator would increase gain in the horizontal plane, by varying
> amounts depending on azimuth (two azimuths would still be zero)..

Well that is one way of looking at it which is probably why in some
instances they changed to sloping dipoles. to enhance the polarity
that was required

>
> Is this the basis for your claim? If so, why would anyone install
> such a thing, as more than that peak gain in the horizontal plane is
> supplied by a cheaper, shorter VERTICAL monopole of about 0.6
> wavelengths.

Not totally but it is a variation to what the books state so my
curiousity questions why
I would opt for a vertical radiator that does not rely on the ground
to provide an answer.
Always remove the maximum variables before determining the truth

>
> If this model is not what you have in mind then please completely

> define your radiator (including how it is fed and its relation to the
> ground plane), and your meaning of "best results" due to tilting it.

Members of the group oppose the idea of sloping antennas but without
reason
It is certainly a good place to start. To me best results is
determined by your needs whether it is total gain, polarity or what
have you. As I stated aproach the proof in your own way with out
interference from others. If you feel that a tilted antenna provides
more gain than a vertical antenna
then you have the solution. From what you are saying you are aiming
either for maximum gain regardless of polarity OR since you are using
a vertical antenna your desires are for maximum vetical polarity. But
that is my interpretation because you did not state yours.
Note Kraus stated a case where the angle of the radiator is best at
about 14 degrees and you trust him

>
> http://i62.photobucket.com/albums/h85/rfry-100/Full-WaveVerticalMonop...

The graph seems o.k. depending on what your desire was. What ever your
desire is you can tilt things while keeping the radiator resonant to
determine the finality of the debate. The ground is perfect right? Let
me know what your desires are for this antenna so I may repeat all the
motions you undertake. Obviously you are on your own and by use of the
computer program you have a modicom of trust in them, which is
encouraging.
You are now on your way but apparently ....alone !
Onward, Onward and now allow the lemmings to follow you

> sitting on them.

Ferro magnetic is just a word but salvagers use the difference
compared to diamagnetic when sorting materials. The diagmagnetic
material levitate higher and in a different direction to
ferromagnetic. The same difference is also used to sort dielectric and
other materials
To understand the implications of this standard operation do the
research in your books or in the
net. You have total control on the subject. Same goes for anti eddy
currents what ever they are.

David while you sit on your arse doing nothing but talk you now have a person
who has got off his duff to provide for your angst for technical matter thus widening your sphere of critisism. Sit back and carry on with your drinking and contemplate what is about to come and how it could then effect arrays so you become ahead of all in your wisdom.

Better yet, just open "Electronics and Radio Engineering by F.E. Terman,
the 1955 edition to page 867. Examine Fig. 23-3 and Fig. 23-4.
Notice that fullwave antenna has 4 lobes almost equally spaced around
its center. That places them at quite an angle as compared with the
lobes of a halfwave antenna. The fullwave pattern results from phase
reversal at the halfwave point,

The fullwave antenna`s pattern is usually something to be put up with
when operating a halfwave antenna at its second harmonic. The resulting
pattern is usually considered undesirable. I wouldn`t tilt a tower by 44
or 45 degrees to make one of its lobes parallel with the earth.

When Obama moves in everything is subject to change, that is why war
action is being taken now because Bush is in a frigid mode about the
deployment
of American ammunition.
Obama ran on change so we will have to wait and see if he signs the 2
Billion cheque to Israel
without conditions before the month of February has passed. Israel
cannot exist without America
thus a new leash if applied will have meaning this time Israel wants
the money up front instead of being spread out over the year the goal
being interest money goes to Israel and out of American hands. That is
a whole lot of money at this time

N.B., Art, that...

(1) a monopole radiator does not need to be SELF resonant to be
intrinsically efficient. Fractional wavelength, vertical monopoles as
short as 45 degrees radiate nearly as efficiently as longer ones that
are self-resonant, as long each is Z-matched to the source driving
them.

(2) a vertical monopole of 0.625 wavelengths and less generates its
maximum relative field in the horizontal plane, regardless of the
ground conditions it has.

> ... by use of the computer program you have a modicom of trust
> in them, which is encouraging.

More than a modicum. See the examples on my website http://rfry.org
for examples of my NEC studies going back many years.

Art wrote:
"Members of this group oppose the idea of sloping antennas but without reason."

A sloper is neither vertical nor horizontal. A horizontal discriminates against groundwave propagated noise sources when receiving. A vertical discriminates against wasting transmited energy toward the zenith and at high angles over the horizon. For locations near the antenna, groundwave propagation is usually preferred. Check page 803 of Terman`s 1955 opus:
"The groundwave is vertically polarized, because any horizontal component of the electric field in contact with the earth is short-circuited by the earth."

Modern dielectric oil (aka transformer oil) is refined mineral oil
with an antioxidant (tocopherol, BHA, or BHT) added to retard
spoiling.

Shell Diala AX
ExxonMobil Univolt 65

are the two major kinds (there's one from Castrol,too)

Both are sold (in 5 gallon pails, typically, as a minimum quantity) by
"jobbers" which can be found on the mfr's website (you enter a zip
code and gives you the distributors within X miles), or by looking in
the yellow pages under Oil,Lubricants-Jobbers. Used to be in the $4-5/
gallon range, but I just was talking to someone who had to pay around
$50 for a 5gallon pail. (probably a hangover from $100/bbl crude
prices)

You *can* use USP White Mineral Oil (laxative) available in pints at
the drugstore, gallons at the feedstore (If you've got a colicky
horse, gallons are the quantity wanted), but it's
a) more expensive
b) not water content controlled

For HV dielectric purposes water content (in the ppm range) is
important. So is particulate contamination. For a dummy load,
probably not so much.

Another inexpensive source of mineral oil without many additives is
hydraulic oil (as used in, say, tractors, etc.).

Even "straight weight" motor oil without additives/detergents can work
(look for the SAE 10,15, or 20 viscosities).. it can be VERY cheap on
sale as a "loss leader" to get folks into the store (since nobody in
their right mind would actually run this in an engine)

For a dummy load, viscosity IS important, because convective flow is
important. (viscosity change with temperature, too...)

Silicone would be massive overkill, and we won't even get into
Fluorinert. BTW, if you spill mineral oil, it cleans up nicely with
detergent and water.. the same cannot be said of silicone or FC-xx..
Silicone oils are almost impossible to remove.

Art Unwin wrote:
> The books state that a photon is a particle without mass.

Photons have no *rest* mass but since they must necessarily
move at the speed of light in a medium, they indeed do have
mass because of their momentum. The mass of a photon is
equal to Planck's constant divided by (the product of the
speed of light times the wavelength), i.e. m=h/(c*lamda).

> The photon as a particle cannot be a wave since its extremities cannot
> be determines as with a particle.

On the contrary, double slit experiments prove that a single
photon can go through both slits and interfere with itself on
the other side. If you design a test to prove a photon is a
wave, it will respond like a wave (even if it is a single photon).
If you design a test to prove a photon is a particle, it will
respond like a particle. The duality is related to the
uncertainty principle.

The main point is that the physical manifestation of RF
electromagnetic fields are clouds of photons. The fields and
the photons are the same thing. Those EM fields have been proven
to be quantized. Photons are the particles that quantize the EM
field.

>   73, Dr. Barry L. Ornitz WA4VZQ

All true Then copper reducer matched the copper outside of the
Andrews hardline that I use and it made its own thread as I screwed
it on. I don't believe I soldered that end like I did with the barrel
input tho I often apply a liberal spray of acrylic on those sort of
aplications to prevent the inside copper from going green not that I
have seen that sort of evidence The use of this type of connection at
points of sharp turns on the 1/2 acre
available for the tower away from the residence really works out
inexpensive compared to the Andrews connectors when connecting to
short lengths of Andrews 1/2 flexible coax.
When tussling with long heavy hardline in the winter it invariably
crackes or splits the plastic outer covering exposing the corregated
copper sheathing, so if it has to be moved or replaced it is better if
it is without bends of any sort, I have a long stretch in an
underground pipe which is easily removed as it is without kinks.As
far as the tape goes I find that the 3M professional roles become
subject to perishing so I don't use it any more tho I have plenty of
rolls on hand

Regards
Art

Without actually researching it I suspect the power handling capacity will be similar to the 1/2" line itself. When a N plug mates with a N socket it presents the same Z as the line with pretty well the same diameters. ie the small pin is not carrying the whole load. The RF losses and subsequent heating will be a function of skin effect of course. How well the pin is soldered will probably also make a small difference. Arcover will be an interesting discussion though as there is an air dielectric where the pieces join..

I guess you could work it out from known resistance of metals, allowing for skin effect and what will happen first, arcing or melting - all at 50 ohms and a bit of ohms law. Lets face it though you can go and look at manufacturers websites for this kind of info.

Hardline of larger diameters than an N connector use DIN connectors or anything else that is "larger". If you are really wanting to know go and have a look at something like the andrew website for data. You can of course also reduce to N size using a suitable fitting.

You don't want the differential-mode field (primarily between the conductors) to couple to the core. Twisting the conductors together helps prevent this, so that's what I recommend. If you don't twist them, the two conductors of the transmission line should lie together as closely as possible.

The third conductor (you mention trifilar) makes the balun a "voltage" balun, which degrades its performance in antenna transmission line applications. This is explained in the article at http://eznec.com/Amateur/Articles/Baluns.pdf.

Cecil
I would have no problem of accepting the presence of photons but the
link you gave me stated
that it had zero mass. I really don't understand that so I am not
willing to spend a lot of time on that or muons which are painted with
the same brush I sure as heck not willing to follow the line on
reflections that you followed as I would cringe from having to deal
with threads of more than a thousand to get the same results you
achieved. By the time Neutrinos arrive on the Earth are particles tho
possibly by a different name and I am also wary of allegations of
fresh particles which require a fresh name where its presence is
determined by unlinked deduction.
I really don't want to spread out beyond the point that I have as it
is apparent that hams are resistive to change so frankly I am at a
place where I am willing to stop my investigation as Americans have

lost the ingenuity they once had together with curiousity which is the foundation of improving the living standards of the family. Waiting for the third world to catch up so that competition is somewhat even could actualy reverse our present station among the world population which is only sustained by attracting the best from foreign countries without which we now cannot function. Any way my present aproach to radiation has not yet been overturned, so arguments are purely for the archives where self perceived antenna experts will be hung on their own petards for all to see which is one of my aims because of their passed conduct with truly good men
Best regards

Mineral oil does not "spoil" in the sense that animal or vegetable fats
(long chain carboxylic acids) do. Tocopherol (Vitamin E),
butylated-hydroxyanisole and butylated-hydroxytoluene are used (in the low
part per million range) to prevent oxidation of the oil which produces
"sludge" and "varnish" (here used as referring to deposits from
hydrocarbons such as gasoline on fuel tanks and carburetters). All three
compounds are also used in the food industry - to prevent spoilage. :-)

The partioning coefficient of agricultural grade white mineral oil is
greater than one million. Dissolved water will have no measurable effect
on the dummy load.

For good natural convection around and through the Kanthal-Globar silicon carbide resistor used in the Cantenna, I would use no higher a viscosity oil than SAE 5.

> For a dummy load, viscosity IS important, because convective flow is
> important. (viscosity change with temperature, too...)

Most organic oils are less viscous at higher temperatures. This is good in the Cantenna application. The lubricating properties of the oil are unimportant here.

> Silicone would be massive overkill, and we won't even get into
> Fluorinert. BTW, if you spill mineral oil, it cleans up nicely with
> detergent and water.. the same cannot be said of silicone or FC-xx..
> Silicone oils are almost impossible to remove.

This is an excellent point. Freon TFï¿½ (1,1,2-trichloro-1,2,2-trifluoroethane) was excellent for removing silicone oils and greases, and it had a number of physical properties that made it ideal for many electronic applications. It is too bad that it is banned as a ozone destroying chlorofluorocarbon. In looking at some of the alternatives for cleaning away silicone oils, I would suggest looking at Caig Laboratories (makers of DeoxITï¿½) CaiKleen NF which is mainly 1,1,1,3,3-pentafluoropropane. Unfortunately its boiling point is 15 C (59 F) and it is quite expensive.

Good post, Jim!

If they didn't say zero *rest* mass, they should have.
A particle with zero rest mass cannot ever travel at
the speed of light as its mass would increase without
limit. Photons do travel at the speed of light but
are known to possess energy and momentum which is
equivalent to mass related by e=mc^2.

>Dick G4BBH

Hi Dick,

Twisting is to bring the two wires into very close proximity. This
reduces the characteristic Z of the transmission line they form. The
reason for wanting to have a low characteristic Z is related to the
impedance transformation (this Z being the geometric mean of the
source Z and load Z). This is generally an issue with one of those Zs
being very low and then you may want to use flat (almost foil) wires
(all wires being insulated, of course).

Well there you go Cecil I am out in left field when I move away from
the presence
of particles which probably are Neutrons as we know the Sun is
directly linked.
I have made my point and I have Richard H, David and RF whatever his
name or call is
firmly in the archives that will impale them. Roy has avoided
everything probably because of his commercial interests so he will not
declare where he is on the subject tho it is possible that the future
will declare his reluctant in other ways. As for the others they were
not around in the old days so they cannot be grouped with the others.
I will leave it to the future hams to determine what manner of men
technical or otherwise that they really are when the true facts are
discovered by doers as opposed to talking heads.I didn't need the
series of a 1000 posts per thread to fully expose them for what they

are as being resistant to change or just ignorant, certainly lazy.
Sooooo, I have achieved what I set out to do and that was to expose
them
I wonder where the next barney comes from or who it is directed at.
One thing we do know is
that they are not happy without the ability to attack so it certainly
will happen.
Best regards
Art

The hole in the lid of a Heathkit Cantenna was to allow for expansion
due to heat buildup in the oil during heavy use. Make sure you allow for
this expansion in any sealed container if you roll your own cantenna.

> my operating bands by nearly one half.

Can't really think of anything offhand, unless maybe you built
the various ratio baluns, and then used a switch to select
which one you want. Palomar used to make some baluns
with some different than usual ratios, but I don't think they
are still in business, and I think those were only rated for
100w or so.
So you might have to make your own to handle power.
And even then I'm not sure how well it would pan out.
I've never tried doing anything like that, so your guess
would probably be as good as mine.
Myself, I run the fan dipoles, but I'm not really too
worried about working all bands. I tend to stick
on the low bands most of the time. I hardly ever get
on 20-10 anymore, unless there is a disturbance
in the force. :/
But I still can if I want. I can slap the tuner inline and
even with the loss, I can still operate fairly well
on the "no element" bands.
But I hang out on 160/80/40 most the time.
In the summer, just 80/40 pretty much..
40 in the day, 80/75 at night.. So it's not too
complicated for me.. :/ The no tune plug n play

ease will spoil you. And the system is efficient
on the designed bands.
Heck, I've got a tower and tri-bander for the high bands.
But.. I don't use em here..
The tower is in the garage, and the beam is up in the attic.
Shows you how excited I am about 20-10 m these
days.. :/
The only time I've ever used that rig is when I've
drug it out to a few field days.
And being I don't usually work those bands at FD, I still
really haven't used it much myself.
It won 10m phone one year I think.. :) I wasn't the
operator though.. I don't come out of my hole until it gets
dark and the low bands come alive.

See "slow light" at:
<http://en.wikipedia.org/wiki/Slow_light>
Not totally at rest, but really slow.

Slow light window glass would be nifty. It would load up with photons
when the sun is shining, and unload them later inside in the evening,
when it's dark. You would also see through the window what was seen
perhaps a few hours before as a delayed action movie.

>Actually, how can a photon possibly rest?; well, and still be a photon?

Everything above absolute zero is not at rest.

FWIW, in the 1960s and 70s wideband CATV amplifiers, splitters and taps
(typically 50 to 600MHz), the bifilar and trifilar windings of the small
ferrite transformers were almost invariably NOT twisted.

I had a fair amount of experience in making some of these devices, and
can confirm that twisting tended to reduce the performance at the HF
end. With bifilar and trifilar windings, adjacent turns were carefully
interleaved. At least one manufacturer had bifilar and trifilar wire
specially made, with the strands lying side-by-side, and glued together.

If the individual strands of wire are already in intimate contact,
twisting them does not lower the characteristic impedance. Of course, if
the windings are NOT in intimate contact, the characteristic impedance
will be higher, and less-well defined. But, as the length of the
windings will be short compared with the wavelengths of the RF signals,
does this matter?

Twisting has the effect of allowing the increased possibility of part of
one winding randomly lying immediately adjacent to the next turn of the
same winding, so it tends to increase the self-capacitance of the

winding. This is almost certainly what reduces the HF performance.

318. Vertical antenna for DX

Newsgroup: rec.radio.amateur.antenna
Date: 2009-01-12 12:20:40 UTC
From: Peter <colleenpeter@westnet.com.au>
Message-ID: <gLednbZG6uoEqPbUnZ2dnUVZ8rGdnZ2d@westnet.com.au>
Source record: 18342

I'm proposing to build a new multi-band HF antenna. Previously I used simple relatively low (8mtr) dipole (28mtr total length) feed with ladder line and matched with a Z-Match tuner. Worked ok, but was useless for DX.
My proposed antenna is to be vertical (7mtr radiator) to be used on bands from 10mtr to 30mtr.
I have heard that vertical antennas are more susceptible to noise!

I'm keen to hear this groups view on the noise issue and generally how verticals are regarded as a DX antenna. Also keen to hear of personal experiences with vertical antennas on HF.

Regards

Peter

Wasn't meant to.. I was just informing Cecil about the balun
in the tuner...

>
> On top of all of that, I want to be able to run about 600 watts output

> my operating bands by nearly one half.

Can't really think of anything offhand, unless maybe you built
the various ratio baluns, and then used a switch to select
which one you want. Palomar used to make some baluns
with some different than usual ratios, but I don't think they
are still in business, and I think those were only rated for
100w or so.
So you might have to make your own to handle power.
And even then I'm not sure how well it would pan out.
I've never tried doing anything like that, so your guess
would probably be as good as mine.
Myself, I run the fan dipoles, but I'm not really too
worried about working all bands. I tend to stick
on the low bands most of the time. I hardly ever get
on 20-10 anymore, unless there is a disturbance
in the force. :/
But I still can if I want. I can slap the tuner inline and

even with the loss, I can still operate fairly well
on the "no element" bands.
But I hang out on 160/80/40 most the time.
In the summer, just 80/40 pretty much..
40 in the day, 80/75 at night.. So it's not too
complicated for me.. :/ The no tune plug n play
ease will spoil you. And the system is efficient
on the designed bands.
Heck, I've got a tower and tri-bander for the high bands.
But.. I don't use em here..
The tower is in the garage, and the beam is up in the attic.
Shows you how excited I am about 20-10 m these
days.. :/
The only time I've ever used that rig is when I've
drug it out to a few field days.
And being I don't usually work those bands at FD, I still
really haven't used it much myself.
It won 10m phone one year I think.. :) I wasn't the
operator though.. I don't come out of my hole until it gets
dark and the low bands come alive.

I may end up doing what you are doing - sort of. I too operate mostly 75 and
40 meters these days. I can put up a vertical for the higher bands. I
already have three commercial verticals (some old, one new), so I would
still have the capability to operate the higher HF bands, if I wanted to.

Thanks for letting me pick your brains. Much appreciated. All of you.

I've had a Cushcraft R5 vertical up on the roof since 1991 and have worked 214 countries with 196 confirmed, mostly on CW, never running more than 100 watts, with a very, very low-effort operation.

Things have been very tough the past several years with the lack of sunspots though; watching the traffic on the DX clusters, it's obvious that folks with better antennas are working people I can't even hear. On the other hand, if I can hear them, I can usually work them.

As far as noise is concerned, I don't have anything other than a (very) low 40m dipole to compare with, and the dipole is a lot noisier. I'm in the city, on a very small lot, surrounded by other homes and the power lines are about 60' away from the vertical and at about the same height. The far end of the dipole is probably not more than 10' from the power lines, both horizontally and vertically.

The little pin is only a mating guide for a much larger center conductor.

I like 7/8" "Heliax". EIA connectors.

That has been on my mind also. We do having a significant slowing of the current known as the Atlantic Conveyor over the last several years. That does not bode well for Europe/England just by itself.

I was looking forward to one more active sunspot cycle before I died (I'm a six meter fan), but it doesn't appear that we are going to have one, if present trends continue.

Of course, just when you think you have Mother Nature all figured out - she comes out of left field with some new phenomenon that catches us by surprise. For instance, the Yellowstone super caldera. If that were to erupt, it would mean an Ice Age for sure. Or would it?

Hi to all,

I am modeling a square loop. The feed point is at the center of the base segment. But I want to have a gap at the middle of a vertical wire, in order to place a relay there to switch to this feed point instead of the base point, so it would change polarization.

My question: does EZNEC provides a way to get the voltage at the vertical (open point) mesured at the gap when the base source is 'active'? Just to be sure that arc won't be created there.

Cecil,

We might indeed be approaching a Dalton Minimum, if not a full scale Maunder Minimum. Much like AGW, there is a strong East-West dichotomy in predictions. The NASA-ESA solar gurus have in the past been predicting a good cycle 24 followed by a poor cycle 25. By contrasts, the Russians have been predicting that cycle 24 and 25 will be very low. The NASA predictions out of MSFC seem to be converging toward the Russian values. We shall see.

Somewhat OT, but last year I taught a General Class license course. The standard illustrations of the sunspot cycle are basically good and better. I added in some historical data showing the Dalton and Maunder Minima. It was fun to watch the wide eyes.

Seems to me, that relay should always be closed during operation
from the base feedpoint so there will essentially be zero volts
across the contacts. Since the relay should not be switched
with the key down, your question seems irrelevant.

> My question: does EZNEC provides a way to get the voltage at the

You don't want the gap to even exist when the base source is
active. The relay contact should always be closed when the
base source is active. The base source relay should always
be closed when the side source is active.

To be more precise, the loop would remain intact, but I want to
disconnect the coax from the inactive source, and I am looking for a
way to do this using a relay near the source (or at the shack). The
power would the full legal power.

Any idea ?

Hi Pierre

I submit that you will have no luck with your plan to run the two
transmission lines from the antenna to the shack where the switch chooses
which one to use. The unused line will present an impedance across the
"gap" which is a function of the length of the line.
Correct me if I am wrong.

There are two ways to get the gap voltage. One is to insert a zero-amplitude current source in a continuous wire at the gap position. The source will act like an open circuit, but the voltage across it can be seen via the Src Dat (source data) button. The other is to insert a high impedance load at the gap position and use Load Dat. In either case it's necessary to set the power level in the Options Menu.

Regarding using dual feed lines, I've done this successfully many times. The trick is to use low loss lines of the correct length. For example, my "Field Day Special" antenna (http://eznec.com/Amateur/Articles/Field_Day_Special.pdf) requires the unused line to look like an open circuit, so its length is an integral number of half wavelengths and it's left open at the transmitter/receiver end. Low loss is important, since even a surprisingly small amount of loss will lower the impedance of a line intended to present an open circuit and raise the impedance of a line intended to look like a short.

EZNEC v. 5.0 has the ability to include lossy transmission lines in the model, so you can directly model the effect of transmission line loss and imperfect length.

One can hook a DPDT relay up. Armature terminals go to the loop. One set
of the contacts are shorted, the other set connect to the feedline.

Yes, you'll need to know the voltage (relative to ground/feedline/relay
coil) at that point to choose a relay. Hook a large value resistor in
your NEC model from the point to "ground" (you should be modeling that
piece of coax as a single wire anyway.. so just put it in series). not
much current will flow through the resistor, so the pattern won't
change, but you'll be able to measure the voltage across it (or, more
properly, you can look at the current in that resistive segment and use
Ohm's law)

Somewhat. That would definitely bring on an Ice Age, should it have a full scale eruption. Never a boring moment.

Just one of many predictions for the demise of civilization:
<http://en.wikipedia.org/wiki/Risks_to_civilization,_humans_and_planet_Earth>

Personally, I think a random asteroid impact, will trigger mass
retaliation by a paranoid military, guessing that it's a missile
attack. The explosions will cause one of several super volcanoes to
erupt, resulting in global famine and precipitate another ice age. the
resultant earthquakes will precipitate tsunami's, pandemics, and 3rd
party politics. After a few thousand years for the planet to recover,
the dinosaurs will return, take over, and devour the survivors. The
date of this event is probably one of the following:
<http://www.bible.ca/pre-date-setters.htm>
2012 seems to be the consensus. Please mark your calendar.

This discussion is NOT apropriate to this newsgroup. In addition, Hamas targets civilian population centers, the Israeli's target military targets, and all too often, much like the Iraqi scum, they choose to surround themselves by civilians so that if they are attacked there are large civilian casualties. Bunch of cowards doing things like placing a military installation in a mosque!

Can we get this thread the heck off of here now.

Hi all:

Great post with lots of good info. But look for a power line transformer
there are very high voltages and a lot of power. In a Ham dummy load the
max voltage on the resistor would be about 275V at 1500w. Unless your a
CB'er you will not see more than that. So hundreds, my self includeDd
Ham's have use common mineral oil from the drug store with fine results.
So go for it. The last time I was took part in filling a dummy load was
back in the seventy's. I was helping friend move into a new house and
set up the ham shack. We needed to get new oil for the dummy load as we
had dumped the old oil rather than move it full and take the chance of
it spilling. So we went to the store and got the oil and along with it

we picked up some water glasses and repair parts for a toilet. The check out girl looked at us kind of funny and I really did my friend reputation in by telling her we had found a new way to turn on...

The issue isn't the water content or particulate contamination (which affect the HV behavior) but the viscosity. Diala AX (for instance) is quite low viscosity. 9.7 cSt/56 SUS at 40C, 2.3cSt/34SUS at 100C

http://www.nttworldwide.com/docs/diala-ax.pdf

9cSt (mm^2/s) is about the dividing line between SAW 20 and 30 AT 100C, so Diala AX is a lot less viscous than even 20 weight motor oil (2.3cSt vs 9.3 cSt)

The typical Mineral Oil, USP, heavy at a drug store is around 34cSt viscosity (3-4 times heavier).

Diala pours pretty readily.. I'd say about like half and half, but not as thick as whipping cream.

That's important for the heat transfer, because you need the circulation inside the load (unless you're just pulsing it..) By the way, that's why the rating on the Cantenna is different for USP mineral oil and insulating oil.
http://www.mfjenterprises.com/man/pdf/MFJ-250.pdf

for 10minute duration, the rating is about 60% when using mineral oil instead of transformer oil.

For long durations, the whole thing gets hot and reaches thermal equilibrium.

For short durations, the lower viscosity transformer oil moves the heat away from the resistor faster keeping it at lower temperature.

That said, most hams aren't going to run their dummy load at full power for 10 minutes at a crack.

Here's a quote from the web:

"The most recent minimum was in March last year. The new cycle,
No.24, was supposed to start soon after that, with a gradual
build-up in sunspot numbers. It didn't happen. That the rapid
temperature decline in 2007 coincided with the failure of cycle
No.24 to begin on schedule is not proof of a causal connection
but it is cause for concern."

Shouldn't have been. Maybe not as good as a higher dipole, but
you should have been able to work some DX. I once used a 40m
dipole camping which was about 8 ft off the ground.
I tried it on 15m, and was working JA's left and right.
And 24 ft up is a good bit better than 8 ft.

> My proposed antenna is to be vertical (7mtr radiator) to be used on bands
> from 10mtr to 30mtr.
> I have heard that vertical antennas are more susceptible to noise!

No. There is no difference as far as the antenna. It depends on the
polarity of the noise source. If it's vertical, then yes, the vertical
would pick up more noise.
If the noise source was horizontal, which is often is these days,
then the dipole would receive more noise.
Many man made noise sources are vertical, but that's
no different than having a desired signal being vertical.
Noise is RF the same as any other signal, and follows the
same rules.
Being crossed polarized will generally give you about a
20 db loss in signal. That will apply the same no matter
if it's a desired signal, or noise.
This only applies to a local space wave, which is how
most noise arrives . It gets a lot more complicated for
sky wave, and usually means a good bit less difference
overall.
So don't worry about noise until it possibly becomes an
issue. It's also quite possible for the increase in signals
to be greater than the increase in noise when working
long paths where the vertical has an advantage over the
lower dipole.
They work real well for DX and also local space wave
coverage, which is fairly popular on 10m.
But I recommend an elevated antenna when using the
higher bands. I would not use a ground mount unless
I had no other choice.
The R5 mentioned is a good one for that application.
I'm wondering how you will feed a 21 ft radiator for
all bands using a home brew design. It's not as simple
as it might seem for proper operation if elevated.

The R5 is a "1/2 wave" type design that does not require
radials. It's pretty convenient.
But if you use a trapped 1/4 wave ground plane type of
scheme for all bands, you will need at least one ground
radial for band, and preferably at least two spaced 180
degrees apart. And that's just a minimum.
Most ground planes I use have at least four radials.

>
> Use an elbow to get tight 90s.
>
> http://www.eaa1000.av.org/technicl/corrosion/galvanic.htm

This is a good list because it covers many grades of aluminum and stainless
steel (but unfortunately not the 308 stainless alloy often used in wire and
nuts, bolts, and washers found in hardware stores). I wish it listed the
actual voltages referenced to a standard electrode however. Galvanic
couples of less than a tenth of a volt corrode very slowly and are often
acceptable depending on the application. I have found the following
article useful.
http://www.ocean.udel.edu/seagrant/publications/corrosion.html

Also I would like to add that the Krylon sprayed over the vinyl tape is
very important. Being an acrylic, clear Krylon protects the vinyl from
ultraviolet damage.

Actually white acrylic enamel can have more of an effect than you might
think. It is because titanium dioxide pigment is used to achieve the white
color. Depending on the anatase/rutile ratio, the dielectric constant of
titanium dioxide can range from 80 to 110. That of the acrylic paint
without pigment typically is around 3.4. Other pigments can also have an
effect, but avoid any paint containing metallic particles.

I suggest using something like Crystal Clear Kryloni¿½ or similar products.
By the way, acrylic paint has excellent ultraviolet resistance.

I've been waterproofing RF connectors using 0.5" wide PTFE tape to embalm the connector. The PTFE will eventually cold flow, forming a water tight seal. The PTFE also prevents capillary action from sucking water into the connector through the gaps, such as along the outer knurling in UHF connectors. On top of that, goes a layer of 3M Scotch 33+ electrical tape, which is claimed to be UV resistant. The PTFE tape does the waterproofing. The outer PVC tape just holds everything in place.

I've done some crude life tests on my roof at 2 year and 5 year intervals. I found that when unwrapped, the connectors are a shiny as they were when new.

However, I didn't think that PVC tape was porous and suffers from UV embrittlement. After about 5 years, the tape does tend to be somewhat bittle. I'll try some Krylon and see what it does. I'm a bit concerned about adhesion to the shiny PVC tape and what will happen if the joint is flexed. I dunno about spraying Krylon when I'm on top of a tower. I'll let you know in about 5 years.

The no-fun part of semi-rigid coax and Heliax is connector sticker shock. Connectors are expensive. I've been finding used connectors, but that creates the problem of finding a replacement crush (compression) ring. Some vendors supply them seperately, others don't. I suspect the ones that don't, recognize that non-availability of these parts creates a market for new connectors. I've had fair luck using brass plumbing crush rings as a replacement crush ring. Buy oversized and cut to size with a Dremel cutoff tool or blow saw. Brass is really NOT a good idea for aluminum jacketed semi-rigid CATV coax, but it should survive if kept dry.

Peter,

> I have heard that vertical antennas are more susceptible to noise!
I live in a residential area with a moderate amount of man-made QRN. My antenna "farm" (which is more of a small garden ;-) includes horizontal dipoles for 80 and 160 meters, and verticals on 40, 80 and 160. Using a remote antenna switch, I can quickly select antenna orientation and easily compare signal strength and QRN levels.

For signal strength, the horizontals are superior under 500 miles, but after that the verticals kick in and are almost-always better at DX distances. In fact, even IF the signal strength of DX stations were equal on both, the fact that the verticals attenuate the local stations by over 20db is enough of a selling point.

For QRN, I think the answer is like real estate: location, location, location. My verticals are at the rear of the property and farthest away from power lines and AC service to the house. The dipoles extend into the front yard and are more susceptible to AC line noise. Although I also expected the verticals to be "noisier", due to locations the dipoles are a little - but barely - noisier than the verticals.

Hope this explanation helps,

It certainly depends upon location. At my previous QTH,
the horizontal dipole was, on the average, 2 S-units
quieter than the 40m vertical. I tracked the noise to
a 30 foot ground wire running down a power pole.

Thanks for the comments, which confirms most of what beleive was the case.

The QTH is Northam in Western Australia, about 80km east from Perth. All
other major population centres are DX.

The nearest distribution transformer is about 250metre away as is the 22kV
HV feeder with only 240/415V low voltage in my street, therefore noise
should be low from this source.

The only thing to do is build it see!

Cheers

Cecil,

Please tell me any more information you may have about the ground wire running down the power pole. I did the exact same thing here. I found most of my noise was being generated by this ground wire 3 blocks from my house. Were you able to do anything about it?

Michael

I have a 200 watt air cooled dummy load made of 2 watt resistors. I
was curious as to how much power it could safley disipate if placed in
a gallon container of mineral oil. It seems to handle 200 watts
continuously with just a muffin fan on it.

What diametric ratio must a fractional wave length radiator be to
allow contrary current flow thru it's center. ?
Diameter / wavelength = 1.0, 0.5, 0.1. 0.001, 0.0001,
0.00001,...?
Regards

I would think that means a bad connection somewhere near
that point. Could be the wire connection to ground itself,
or a bad part somewhere near that area, and the ground
wire was just acting as an antenna extension to the bad
part. Many parts can develop bad or leaky connections and
start to cause noise. It was a bad end connector once when
I had to call the power co.
Make sure the ground wire is actually connected to ground
well, and if it still makes noise, try banging the power pole with a
sledgehammer while listening on a portable radio.
If the noise changes, it's fairly close in that area.
Or if you use a radio with a directional antenna, you might be
able to get fairly close.
Once you get that close, nothing to do except bug the power
company.

Art, Did you look at my link below? What does "diametric" mean?

Ansoft's (www.ansoft.com) "Maxwell" is a "Finite Element Modeling"
(FEM) program which, among other things, can accurately produce
a graphical representation of the current distribution in a cylindrical
conductor. See examples at:
http://www3.telus.net/nighttrainexpress/skin%20depth.htm
These graphs are reproduced from an article in the November/December
issue of QEX magazine, pp20 - 29, by Rudy Severns, N6LF.

No, but I will now. First I will look up the word "finite" and
"finite"
Just now going out for dinner
Re diametrics, I was referring to the ratio of diameter with respect
to wavelength
(I am assuming that skin depthg is not limitless.)
Best regards
Art

Not an easy question to answer. allot depends on how the thing is made.
How much power it can handle is controlled by how fast the heat can be
moved away. It doesn't matter if it's oil or air. In oil the speed is
set by how obstructed the path the hot oil would need to travel to get
away from the part thats making the heat. I think the resistor in a
cantenna in free air is only good for about 50 watts but it designed for
the smooth passage of the oil around the resistor. I don't think that
your mass of 2 watt resistors will allow the oil to pass freely enough
to get to a KW for vary long. If you used a pump to move the oil it
would work better in the same way that a fan works.

of course it is limitless, it is an exponential function so it never goes to
zero. the so called 'skin depth' is only the point where the current has
dropped to 1/e or about 37% of the surface value, still a significant
current.

The plots at the link Frank provided show current going rather abruptly
to zero - even negative ("contrary"?) in some cases. I wouldn't presume
to know whether it is modeled correctly.

Yes, skin depth is measured or referred to as 1/e which incorporates
decay.
I am totally unaware how" decay" comes into the picture or what
happens with respect to density
Now I question the term "decay" in this instance as it is the
displacement field
that creats resistance ala eddy current which I allude to as the
levitating force
on a unbound electron. At the moment I cannot see how a unbound
electro within an empty shell
can be absorbed by a tight matrics consisting of bound electrons or
when reaching the inside of a tubular conductor fall off the inner
surface! The morer I get into the radiation subject the more I begin
to question things. The idea that a circulating current /field is
limitless in depth blows my mind.

Good to Gigs at 5kw. I recall a test of Pl259/SO239 connection vs. N found the PL259/SO239 to fail from overheating due to the internal mismatch with as little as 500 watts at UHF frequencies.

I don't recall the Maximum at HF, but High SWR is a consideration. Best to use open wire feeders in that case.

N is a 50 ohm connector, but the PL259/2O239 is a stepped transistion and isn't even specified for impedance.

> People who exploit children in warfare are COWARDS!

Maybe ! So should U.S. arms be supplied
when they was used kill the children any way?
Now we have phosphorus and we know what happened in the East end of
London
Now all those that are in the killing fields can resort to gas as in
the 1st world war,
especially when the U.S. supplied personel bombs are being dropped
contrary
to prior restrictions made. Perhaps if we started again at the
begining where the settlement area was determined by the UN in the
same way the Allies did after the second world war israelis and
arabscould live in the way Germany does now. We cannot continue to be
like Gulliver who was rendered impotent by the little people while he
slept such that the killing field become expanded once again.If the
youth who stood in front of a chinese tank in Tinnerman square did the
same thing in Gaza the tank would continue to roll over him as if he
was a member of the U.N.
It would be stupid, not cowardly, to stay imobile in front of a tank
or a bulldozer or not to seek shelter in the absence of anti aircraft
missiles to resist the impact of bombs and phoshorous.
Londoners lived in shelters and the underground railroad when under
the same conditions, so were they cowards? The Japanese fought to the
death standing their ground in front of the allied onslaught so should
we not call them heroes? When the israelis threw themselves over the
mountain top rather than fight the enemy what should we call them
now.? To save a life in a critical moment man is capable of anything,
including assasination or eating human remains when being starved, so
how can one judge another human from a distance so far?

The issue is a little more complicated than simple UV resistance and
porosity. To begin with, pure PVC has a very poor UV resistance. But more
importantly, it is brittle and it needs a plasticizer to make it flexible.
The most common plasticizer is DOP [dioctal phthalate, or more correctly
2-ethylhexyl phthalate]. but this can leach out of the PVC leaving it stiff
and more brittle.. To achieve better low temperature flexibility, DOA
{2-ethylhexyl adipate} is often used. Vinyl tape has to be very flexible
and stretchy even at low temperatures, so high levels of plasticizers are
needed. DOA is usually used, either alone or in combination with DOP. DOA
tends to leach out faster than DOP. It also has poorer UV resistance than
DOP which is poor to start with. There are far better performing
plasticizers than either of these (made by reacting adipic or phthalic acid
with polyols), but while they offer superior UV resistance and leach out
much more slowly, they are rather expensive. Loading the PVC with carbon

black, an excellent absorber of ultraviolet (and visible) light, helps too, but the amount of carbon black that can be used on an electrical tape is limited by the need for good dielectric strength. Spraying the tape with Krylonï¿½ acrylic paints provides both UV resistance and a slowing of the loss of plasticizer.

I would not worry about the PTFE (Teflontï¿½) tape. While very resistant to liquid water, water vapor can pass through the tape easily and condense on cold metal parts of the connector. PTFE tape is porous, but the surface tension of water prevents it from passing through the pores. {Water vapor, too, is a smaller molecule than oxygen or nitrogen.} Several layers of electrical tape, wound in opposite directions, and sprayed with Krylon survived at least 15 years in one of my outdoor applications, and when removed, the coaxial connectors were shiny too.

In case anyone is wondering about my expertise here, I worked in the research Laboratories of Eastman Chemical Company, who made a number of plasticizers, and W. L. Gore & Associates, who started by making PTFE tape. The breathability properties of Gore-Tex while still shedding water are a result of controlled pore sizes in PTFE.

JB sez "N is a 50 ohm connector, but the PL259/2O239 is a stepped
transistion and isn't even specified for impedance."

Actually, think you will find that N connectors, as well as BNC
connectors come in Several Impedences! (Not one size fits all).

Had surplus ones with center pins fit 90 ohm, and 75 ohm (no go on 50
ohm coax)! Be sure to check connector specs! Jim NN7K

Frank, I am not saying he is not credible but he is part of the older
generation and there was not enough detail supplied to determine
whether I accept it on trust. When the antenna programs
throw out the yagi in favor of arrays or radiators in equilibrium form
should we throw it out in favor of conforming with the past? Yes,the
article is in line with what the older generation has lived with
but the new generation have more tools and information than the
present dying generation.
Problem with present day authors is up against the "publish or
perish" format regure references to prior papers in quantity to
provide legitamacy to any new papers, without which they will have a
hard time publishing. Greasing the wheels of fellow contributers or
white paper authors is much preferable to declaring those who judge
are in error. Frank, a lot of the theory of antennas is either based
on vanishingly thin radiators without regard to room required for eddy
field and in some cases with transmission lines where it is possible
to get three different current flows together with a closed circuit,
yet we are now protecting the idea of non closed circuits where the
current flow
is on top of each other. No wonder it is said over the last 100 years
that we don't fully understand radiation especially when it takes over

I would hardly call the tools used in this simulation "Older".
Ansoft produces some of the most sophisticated, and up to
date FEM software available. I have seen Ansoft's HFSS
accurately model current flow through PCB vias, around an end-
launch connector at 20 GHz. CST Microwave also
produces high end FEM software. All the models are
done in full 3 D, with actual physical dimensions. This
FEM software started to apear about 10 years ago and
costs in the range of $40,000 to $50,000, with a $10,000
per year maintenance fee.

"Publish or perish" is usually applied to university positions.
It is doubtfull that too many people are able to pubish in
the Proceedings of the IEEE, or one of the IEEE Society
Transactions.

Frank,
It has not yet been proven that current does not flow thru the center

of a radiator.
I see it as a manufactured statement to satisfy the idea of an uncompleted circuit where the current
passes over or thru and in a different direction than the same current that generates its existence !
It does all this where the books state it is a series circuit where the paths taken by the current are not identical. Why manufacture all these happenings to prove what is just a theory, while at the same time destroying the reasoning of a closed circuit without an explanation how such actions
creat radiation, especially when it is admitted that radiation is not fully understood?
I think the time as come to review again from the time of Maxwell and build up afresh in line with
a century of findings and then re evaluate.
A good start would be to evaluate why antenna programs based on Maxwells laws provide solutions based on equilibrium while discarding all other designs. Saying that it can't be! Because" "if true it would have been discovered a 100 years ago" while silently adding "all is known about antennas and the patent offices should be closed"
Regards
Art

Most likely it leaks at the seams. Gore sells a kit containing seam tape patches with the proper adhesive to recover those seams. The loss of "breathability" is due to the fact that the PTFE can adsorb skin oils, grease, etc. This requires cleaning to remove the oils. You might want to visit http://www.gore-tex.com/remote/Satellite/content/care-center for more information. The outer fabric outer layer may occasionally need an application of DWR (durable water repellent). It is also discussed at the same web page.

Decrease of RF current with depth below the surface of a conductor is only a true exponential if the available conductor depth is infinite. In the modeled situations where there is 'competition' from a skin effect on the opposite side of the conductor, the solution is a Bessel function which does pass through zero and reverse direction at certain depths.

In other words, the model is behaving as expected.

Programs such as NEC and Maxwell are not released until they have gone through a very detailed process of checking and validation. The first step is to check against special cases that can be independently solved by analytical methods (in other words, pure math). The work isn't complete until all the results agree within close margins, and the reasons for any differences are fully understood.

By the time we amateurs come to hear about these programs, they have already been thoroughly validated by developers and professional users. That doesn't make them immune from further criticism... but only by people who have done the work to earn that right.

So the developers know why the programs in the final analysis
gyrate towards radiators and arrays in equilibrium?
Do you know what that reason is?

Present thinking, I thought, suggest that the skin depth is quite thin when used
for non destructive testing of materials. Is that also known by the developers?
If the providing current is on the surface of a radiator then why does the resulting eddy current
penetrate to the limits? Seems a sort of scrambled assumptions at play here!

That depends on your return on investment in cost and labor, and the application. Since the skin effect applies, thankfully, the flow through the center is less of an issue.

Should we use tubular elements?

Or as some have done, use Silver or Copper plated steel wire or rod? At some frequencies, this is profitable.

Why should we "allow contrary current flow through it's center." as opposed to promoting the skin effect, since current flow through the center does not radiate? Like eddy currents in a transformer are just loss.

I don't see how they could, being you won't describe how the
word "equilibrium" applies in such a case.

> Do you know what that reason is?

Being I have never seen an antenna modeling program gyrate,
whether towards or away from a radiator or array, I sure don't.

Best regards
Art

This is so amusing. Those who don't appreciate knowledge thus far, probably don't know it. Those who are desperately hoping for a revolution might just have a ulterior motive or agenda.

It is interesting to note though, that it takes a lot of PhD's to design something so that impoverished people (often children) can have a bowl of rice every day to build the technology. Also, the environmental disaster that is created by throwing away "gadgets" every 6 months to implement the latest technology. I wonder if the Liberal academic establishment is in touch with the environmental disaster they are creating so that we can all be enslaved to the global neural network.

The cantenna posts are amusing, in that no one even brought up the transition from the connector to the resistor element, or adequate thermal conductivity between the oil and the outside air. The biggest problems revolves around these issues. Starting with how long must the transition be to allow adequate oil convection flow. The answer to all this can be found with the high power Bird loads that have a smaller oil area but use large radiating fins, or better yet, A chip resistor array directly mounted to a large fin area.

Excellent point! You usually need to get specific connectors for specific cable. Trying to get what you ordered is often the reason for surplus (or failure). There are so many ways to goof up a communication system these days. Come to think of it, there is far more to be considered for people to be able to see eye to eye.

For instance, there has always been a conflict over how much supervision should be required for the "man in the field".

Right JB.
If it didn't flow thru the center one could assume that it would
radiate. Thus
keeping the current flow on the outside allows us to use micro length
antennas
since radiation occurs all the time. Whow
If one sees the current flowing thru the center where the losses are
small then one can deduce
that radiation is conmensurate to length up to a maximum of one
wavelength.
By golly isn't that the same solution that the books advocate without
the invention of a circuit that flows when the circuit is abruptly
terminated.
Newton's laws advocate equilibrium as an absolute. Maxwell followed
this absolute when formulating his laws. Application of Gaussian law
of statics by using the eddict of equilibrium
confirms the laws of Maxwell. Antenna programs that are allowed to
follow the edicts of Maxwells laws again substantiate the edict of
equilibrium.
So with all of the above I am inclined to trust such computor programs
but NOT the atributions
supplied to explain the conditions that theories atribute to the
explanation of why agreement is shown with respect to equilibrium plus

the mathematics involved in all the above cases.
I do not know of any other accepted circuit in physics where a circuit is abruptly terminate and still meet the requirement of equilibrium.
When it is broadly agreed that radiation is not fully understood when following existing explanations I am inclined to question the theories

Note Antenna programs with optimizer allows the user to initially insert a design for a particular requirement and the program will make corrections to that design by the application of Maxwells laws to achieve the required object by a solution that is in equilibrium.
Programs WITHOUT an optimizer provides an answer based only on the metrics inserted and without correction
I.E insert a planar design and the results arrived at reflects the input only and not the array that completely follows Maxwell which provides for superior results which never is a planar design

richard Fry wrote:
"Art, the current distribution along even the shortest (fractional wavelength), constant OD radiator also is sinusoidal, etc."

Yes. One of the first things Maxwell noted of his equations is that they have the form of equations desceibing wave movements in water.

One of my (new to me) books on electromagnetics supports Art`s use of Gauss.
Stanley V. Marshall in "Electromagnetic Concepts & Applications" says:
"In most cases, it is much easier to evaluate the scalar field direction from which we can evaluate the electric field intensity than to find the electric field intensity directly. In cases of symmetrical charge distribution, using Gauss`s law to find the electric field intensity is still the simplest method, if we can find a Gaussian surface that will allow us to remove the field function from under the integral sign.

There are several ways to solve the same problem. Even if we use photons, all must give the same answer.

I appologize for disparaging Art`s methods.

Best regards, Richard Harrison, KB5WZI

It is no difference to punishment applied to the Jews and the same
that was applied to cities in Germany. The second world war used the
killing of twelve terrorists for one of their own in Europe which is
now upped to a 100 by Israel. We did the same thing to the american
indian what israel is doing today except we are not imposing
aparthide. We are all to blame, except Israelis, because they have God
on their side. The Jerusalem post published a comment of mine deriding
the effectiveness of bulldozing houses of arabs in the aproach to
peace. Since that day Jewish people
have informed me that I should love them per the bible, while others
aligned me with Hitler. On the other hand, mail from around the World
was questioning how I got the newspaper to print a comment from a
Gentile?For me I am against Zionism at the expense of the residing
arabs, not against all jews. At the moment a city has been starved and
then shuttled into an ever tightening loop with no escape route for
civilians so they can be killed with the rest.
The next phase of these actions can involve the use of gas again as
rules of the past are decimated You should not be surprised that I am
willing to stand by my convictions and speak out
in the face of denials and not to stay silent
Art Unwin KB9MZ.....xg.....(uk)
I find that hard to condone as well as crimes by gentiles or committed
by non jews.in the past just to judge the present happenings on behlf
of apartide practices

My best friend who is now a silent key was a non practicing jew who
also yurned for peace

I don't want to add ammunition to support Art's gibberish, but it's interesting and not widely known that current *does* flow in the opposite direction to the main flow, at certain depths in a homogeneous conductor.

In a solid conductor, the current density does, of course, decrease exponentially with depth. The depth at which it's decayed to 1/e (about 37%) of the surface density is the "skin depth". This is why a hollow tube is just as good a conductor as a solid one, providing only that the tube wall is at least several skin depths thick.

But the *phase* of the current changes with depth, too, quite dramatically. As you go each skin depth deeper below the surface, the phase becomes one radian (about 57 degrees) more lagging. So at pi skin depths below the surface, the current is completely out of phase with the surface current, i.e., it's flowing in the opposite direction. Of course, the current density at this point is very small, only 1/e^pi ~ 4% of the surface density, so only a small fraction of the total current flows completely backward. (Good thing!) At two pi skin depths, the current is again in phase with the surface current, but its magnitude is only 1/e^(2*pi) ~ 1/500 of the surface density. And so forth.

This isn't of much immediate practical use, and it's certainly not offered as supporting in any way Art's fanciful theories (whatever they might be). But it is an interesting fact.

Roy Lewallen, W7EL

the 'contrary' current makes sense because of 2 different effects. the main
one is the phase delay of propagation through the conductor. the velocity
of propagation of the wave within the wire is MUCH slower than through space
outside the wire. this produces a phase delay such that when you take a
snapshot, as those plots most likely are, you can get opposing currents. if
you were to take a time average or peak value you would get the plain
exponential as predicted by the simple equations that are normally taught.
The other confounding factor on those examples is the discontinuity between
the copper and steel, again the velocity changes across that boundary
shifting the phase in a step.

that's because the usual discussion of "skin depth" is cribbed from a physics textbook, where the (not always explicitly said) assumption is "in an infinite uniform plane of infinite depth with no other magnetic fields"

In that restricted (but useful) case, you can model the current (for the purposes of things like resistivity) as if it were uniform from the surface to the skin depth.

In cases where the thickness of the conductor is "large" relative to the skin depth, the error in using the rectangular layer of current assumption is "small".

In cases where this assumption isn't valid (or, if you need higher precision), then a more complete analytical formulation is needed. If the conductor happens to be circular, then Bessel functions are surely involved (differential equations in circular things almost always involve Bessel functions and/or Hankel transforms). Since most of us don't do Bessel functions in our heads, we use tables or lookups.

There's two sets of tables and graphs for round conductors: one is for solid conductors; the other is for tubular conductors. Different boundary conditions on solving the differential equations, so different analytical solutions.

A 1998 paper by Gaba and Abou-Dakka gives all the equations and background, and adds the details needed for stranded wires and cables made of multiple substances (e.g. ACSR power lines).

There's also some analytical solutions for square and rectangular cross sections, but they're pretty ugly, compared to the round conductors.

once you start talking multiple materials and dielectrics, it becomes easier to do FEM (following the dictum of my father's differential equations professor: useful differential equations should be solved numerically, because the analytical solution is often harder and more

computation than the numerical one). (another good example of this is calculating the field between two spherical electrodes)

I wonder if one could set up some sort of interesting demonstration of
this. If you could, for instance, have a 1 foot diameter conductor with
skin depth of an inch or so, and some (probably not feasible) way to
indicate current flow. (yes, in order for this to happen it has to be
AC, etc.)

Exactly.
And every phase change support current /charge flow in the opposite
direction
in accordance with Newtons laws. Use a vector drawing to prove it for
yourself !
Or provide same as proof of my errors.
While you are at it do the same for a full wave radiator which IS in
equilibrium per Maxwells law
when the inner vector is now non existant since radiation occurs on
the surface at all times in accordance with the "tank circuit"
abilities And where the center path is only resistive in the case of a
fractional wave antenna. This is very, very basic physics to which I
know no challedge in the physics world. For you it is no difference
when you were affiliated with QST and supported the
commercial publishing of rediculas specifications to oppose change.

Sooner or later you will again have to change your tune to one that
does not include opposition to the truth.
The book that Richard is quoting is available on the web for $1.99
which will allow you to confront all the authors of their "rediculus"
errors at the same time together with all the Universities that use
the book as part of their physics curriculum
I await your appearance on CNN where it will undoubtably push aside
the viewing of the president

Cecil,
This is how you defrock the self perceived pompous expert. He
ofcourse does make errors which he will not own up to.

>is limitless and exponential in real conductors.

As noted above, that commonly-held assertion is only true for conductors
of limitless depth.

It's very stupid of Hamas to use children as shields, since Israelis have no problem with mowing them down, and blowing them up with the weapons we've supplied them over the years. It's a waste of time writing about this on this forum, though. No one here can do anything about the Israeli atrocities. I suggest, for those interested, the talkbacks on the Jerusalem Post, Haaretz, and even Al Jazeera might prove useful.

thats interesting, thanks to everyone that responded to the
oirginal ontopic post

Glad to know I wasn't the only one having issues finding certain
values for those connectors .

i started to read pl259 folklore and heard that it was desiged
specifically to handle the higher power(HF) and while a quick look
at it does reveil a thicker connector, i sorta guess that all
it's other issues might not make it the best choise for even hf
and wanted to bounce it off you guys so thanks

my second choice was going to be continuing use of N connectors
but wanted to make sure it wasn't going to have a problem say at
full legal power on HF

I have a few DIN connectors but they are rather expensive even
surplus and ultimately requring me to use a jumper since non of
my gear actually has that

all my coax runs use N except 1 run in which i have times
microwave lmr 400 with their captivated Pl259 I have swept the coax
at time of install and every now and then afterwards it still shows
what it should and same as day 1 but it was for an experiment
not sure i'd want to use the pl259's long term

again thanks for all

> AC, etc.)

Why not insert a wafer of the same material parallel to the axis and
apply
a non destuctive test on the material as a whole. When the wafer is
withdrawn
would it not be possible to observe the actual effective skin depth.
Of course, the slot for the wafer must not enter the radial surface
of the
radiator other wise circular flow would be interupted thus destroying
the
datum apearance. Obviously I have not utelised a non destructive test

first hand.
From my point of view as long as there is an eddy current on the
surface to eject a resting particle
there is not the requirement for endles depth and decay would be the
condition of the particle alone
and not that of the conductor. The particle still has nuclear content
when it emerges from the Sun's
arbritary field which is obviously subject to decay
Regards
Art

Yes thanks for the site it's interesting and an ontopic post
but mostly not really connectors i'd use but the theories there
are relavant.

seems many have hi-jacked the thread with mostly off topic posts
regarding how to "water proof or attaching connectors etc"

Remember that it is predicted that our world will flip with respect to
the poles
thus the zenith of sun spots will alter by eleven years. Best to learn
to swim before that happens. Last thing I heard was the magnetic pole
was in Siberia and still going away. Hopefully there is
still time for the poles to change their minds and return.

But change is coming!.
The World sees the the Palestinian rockets are landing
in occupied lands which makes the residents part of the occupation
forces.
Next week will be the start of american separation so that Israeli
withdrawal starts
to way back of the green line and the
West Bank will extend from the sea to the river and all that is North
For this Iran gives up the atom bomb as must Israel. All this subject
to agreement by Syria, Lebonan,Jordan and Egypt with other arab
nations on the side lines. America's standing with the rest of the
world will no more be governed by Israel actions with arms supplied by
the US to the tune of $500 for every man , women and child for every
Jewish resident every year. No more bail outs in the US or the Mid
East.
Tom, change is coming. Is it peace or Armagedon?

Hi ML

I wonder if you saw the page 116 graph of
http://www.southwestmicrowave.com/mpd/pdf_06/Power%20Rating%20for%20Coaxial
that shows the power handling capability of the N connector.

Hi Mike,

Circular polarity is not political? You can have a left hand screw or
a right hand screw.

The Earth's magnetic field does not affect when sunspots happen.

I think the connector can handle more power than the cable.

Actually the northern magnetic pole is in Eastern Northern Canada and
progressing slowly eastward.

The current sunspot cycle is merely slow in appearing. The 11 year cycle
is only an average. Some cycles are less than 11 yrs and some are longer.

From what I have read the alignment of poles from both of them (Sun
and Earth) determine
the degree of sunspots and flares. This was reported in Scientific
American sometime last year together with the magnetic type stream and
their elasticity and it relationship with respect to the solar wind. I
don't know enough about the subject to debate what is correct and what
is correct.
But it does correlate with the sun's cycle that is of concern to hams
at the present time and with hams past experiences.

Cycle 23 was strongly double-peaked. If you view a graph of several
single-peak cycles overlaid with 23, then move the second half of 23 to the
left, so its second peak matches the peaks of the other cycles, the falloff
of 23 looks more nearly typical.

Could it be that Cycle 23's notable second peak has made it last longer? I
hope that's it. Or maybe Cycle 24 is just the beginning of the Unwin
Minimum.

The Bird 43 Wattmeter has Type N connectors on it. The Bird web site says,
"Accurate CW field power measurement over 450 kHz to 2.7 GHz and 100 mW to
10 KW."

That's good enough for me to say "10 KW."

Are you aware that the Sun's magnetic poles reverse every
solar cycle at the peak of the cycle? Quoting:

"The Sun's magnetic poles will remain as they are now, with
the north magnetic pole pointing through the Sun's southern
hemisphere, until the year 2012 when they will reverse again.
This transition happens, as far as we know, at the peak of
every 11-year sunspot cycle -- like clockwork."

http://science.nasa.gov/headlines/y2001/ast15feb_1.htm

The degree of sunspots and flares are a cause. The effects
on Earth depend upon "the alignment of the poles from both
of them" which changes approximately every 11 years.

It doesn't "go" anywhere. As the conductor (and it's return path;
ground or whatever) is resonant, the generator sees it as a resistor.
The current is "absorbed" by this "load". But instead of pure heat, an
electromagnetic field ensues. Nothing goes anywhere.

Hay Art. They say the memory is the second thing to go, I forget what is
first. HI HI

The following is from Wikipedia:
In 2001, the North Magnetic Pole was determined by the Geological Survey
of Canada to lie near Ellesmere Island in northern Canada at [show
location on an interactive map] 81ï¿½18?N 110ï¿½48?W? / ?81.3, -110.8?
(Magnetic North Pole 2001). It was estimated to be at [show location on
an interactive map] 82ï¿½42?N 114ï¿½24?W? / ?82.7, -114.4? (Magnetic North
Pole 2005 est) in 2005.

There is a URL link in the actual Wiki listing showing where the mag poles are located. Please refer to Wiki for this information.
I hope you have a Happy New Year.

Dave

If you are talking, wipe off the screen. I trimmed Dave's post to
reduce confusion - your alternative word, load, never appears.

In fact, we never conjoin the term garage and load, nor roof and load,
nor power lines and load. No, counterpoise has a well known and long
established meaning that has been found in a lot of texts and none of
the authors have ever felt the necessity to join that term with
garage, roof, or power line either.

Perhaps Newton kept his counterpoise in his garage - the historical
record is rather vague on this matter.

Ahh.. the famous "boundary condition"..

Say you've got a big bar 100 feet long and a foot in diameter, and you've induced a rf current along it by some means. All those equations with the Bessel functions tell you the magnitude and phase of the current in some infinitely thin slice in the middle.

But, at the end, those equations don't hold. Essentially, the "reverse current" flows radially across the end and forms part of the "forward current" on the surface.

I doubt there is a good analytical solution of this. There's probably some decent approximations (within 5% or something), but anyone who really cares is going to do a FEM analysis of some sort and solve the problem numerically.

Hmmmm

I think anybody with a education could apply vectors to a full wave
RESONANT radiator with charge and applied current such that Newton's
laws can be shown as being satisfied
Why would anybody shy away from that since we know that there is no
current/ charge flow
on the inside so the vectors will balance. Is there any disagreement
with that aproach.
If so why?
It WILL show agreement with the groups aproach with respect to zero
current / charge flow in the center of a radiator which should make
you all feel good.

Art wrote:
"Frank, It has not yet been proven that current does not flow through the center of the radiator."

It definitely has been proven that significant current does not ordinarily flow through the center of a radiating conductor.

Skin effect is an accepted and observed phenomenon.

An RF conductor has a radial E-field, its lines terminating on its surface. Also, the current carrying conductor has has an H-field whose lines encircle it. The E-field lines are not exactly perpendicular to to the conductor`s surface but inclined at a slight angle to it. The surfaces of equal phase are cupped inward slightly on the forward side as if the wave were dragging its feet along the conductor`s surface. The H lines are parallel to the conductor`s surface. Direction of propagation of the energy is at right angles to both the E and H fields, but not quite parallel to the conductor`s surface. It is inclined slightly toward the inside of the conductor. Direction of propagation can be indicated by a vector P. P can be resolved into two components, PL and PR . PL represents the longitudinal component of vector P. PR represents the small amount of energy which is being drained away from the transmitted signal and dissipated as heat in the conductor. Radial E lines of force tilted forward in propagation along the conductor are slowed and short-circuited by the conducting material through which they are moving. This current flowing through the resistance of the conductor causes I squared R losses. It also gives rise to a magnetic field within the conductor which opposes the external H field.

The result of the above is that the density of the current is quite high at the copnductor`s surface, diminishing as we look inward toward the center. The relative phase of the current, in addition, is not the same at all depths; because of the slow velocity of propagation of the wave within the conductor, the phase of the current is progressively delayed as we examine it at greater depths. At some depth, the phase of the current may be 180 degrees behind that of the surface current, which means that it is flowing in the opposite direction! The integral of the current density, integrated over the entire cross-sectional area of the conductor, will of course be equal to the current in the conductor as would be read by an ammeter.

Not all conductors are solid copper or aluminum. Seawater has been thoroughly inveatigated in regard to communication with submarines. Actual RF currents at all depths have been calculated and measured.

Best regards, Richard Harrison, KB5WZI

> electromagnetic field ensues.

Yes, it's like asking where does the current go in a real big capacitor. Charge flows onto and off of the conductors, and since they're physically large, time is required for the change in field to propagate from one end to the other. We calculate the current flowing along antenna elements. But we can also calculate a current flowing through the aether based on the same principles. Perhaps knowing the magnitude of the field traveling the element would be at least as useful as knowing the magnitude of the current. The two are after all inextricably liked.

> Nothing goes anywhere.

Indeed. I like it. It's leads me postulate further that nothing goes everywhere; anything goes nowhere; everything goes anywhere; anything goes everywhere; nothing goes nowhere; or perhaps even that everything goes nowhere.

I thought it would be better to accept the responses of the news group as factual.
Now I must determine why equilibrium is not understood as this is a requirement
for any radiator vector diagram. I have quite a lot of books that were recommended
reading in US Universities so I will read thru those for what they say about equilibrium and why it has been dumped or if Newtons laws have been corrected e.t.c. Without an understanding of equilibrium all physics as I know it falls apart!. Thus a chasm is in place between me and the group and I have to search for the reason.

Thanks to all for your inputs
Art

???

I busted the rings off plain old 50 Ohm BNC cables, at the far end. How does this threaten my Rohde and Schwarz? We never use N cables. We "permanently" adapt any N fittings to BNC. I made the cables to test a 75 MHz transmitter with reverse thread TNC fittings. How many people keep reverse thread TNC cables around?

I'm with you. I don't want our present civilization to collapse either.

Will the Sun bounce back to normal? Some say it isn't truly abnormal yet. Me, I don't know the answer, but I'm running out of time, as are we all. I'd like for this Cycle to come forth and provide we amateur radio ops with some good six meter propagation. It could happen.

>been corrected e.t.c. Without an understanding of equilibrium all
>physics as I know it falls apart!. Thus a chasm is in place between me
>and the group and I have to search for the reason.

There has been no correction to Newtonian mechanics, and there
is no violation of Newton's laws in electromagnetics.

As for reading books on electromagnetics. I cannot understand how
it is possible without knowledge of math. Do you understand any
of the following?: line integral, surface integral, volume integral,
vector "dot" product, vector "cross" product, gradient, divergence,
curl, "Del", and vector magnetic potential. With these tools
it is possible to calculate the E and H fields at a point in space --
based on an assumption of current distribution. The hard part
of computational electromagnetics is to determine the actual
current distribution on a radiator.

Frank
As I said earlier, I accept the thought of forward and reverse flow
of AC current together with the resulting contra flow of Eddy currents

on different levels of the surface of a radiator, all at the same time. Thus at this time there is no pressing reason to expose myself further in terms of the education that I have retained. Now that Richard's book has substantiated my aproach via Gauss
I can now procede in the direction of antennas that are not in a straight line and at varying elevations. Programs on antennas are available for the user to follow this cause of action which are committed to Maxwells laws so these efforts will not resolve around my personal thoughts, just arrays that are termed in equilibrium and the existance of particles with respect to radiation.
From the very start, when I extended Gaussian law of statics to that of Maxwell, I have sought council to the effect that consequent determinations prove the action of particles. Postings pretty much accept that antenna programs are correct thus I can realistically use that as a proof.
It is not necessary for everybody to accept this line of thought especially when equilibrium, a staple part of Gaussian law, is not accepted or understood. This particular debate has extended for about a decade from when I postulated that a tank circuit provides radiation in a series of pulses and not waves, I have not altered any thinking on this group so I am calling that particu;ar debate a washout and thus will concentrate on commenting on cantenna questions and the like.

You shut up, Tom! Go back to your own country! Quit putting words in my mouth that come out of your head. I never wished anyone dead and I certainly don't march in the streets screaming for it, I don't teach it in the schools, and I certainly didn't VOTE FOR IT!

A topic was raised that is indefensible. If some Hamas team moved into my house, I would sooner catch a bullet in the back walking away than participate in random civilian attacks. But I suppose that opportunity never got in your face because of where you live. It's people like you that legitimize terrorism by defending it. Shame on you both.

The N male pin is usually larger than the BNC fem center receptacle. This
results in a BNC female with increased loss or breakage due to fatigue.
This was known in the extended technical community of my experience as a
GRONK!

> Jim NN7K

Back in the mid-1960's there was an article in QST where they did this. The load will definitely be frequency dependent as demonstrated by experimental results. Also the salt used will effect the results. From a theoretical standpoint, the mobility of ions is dependent on the size of the ion. The bigger the ion, the slower it will move. This conveniently explains much of what is seen in ground losses and is why electrolytic capacitors are essentially useless above 1 MHz. The ions cannot move fast enough in the small times seen per cycle, so the current falls off. Ion mobility also decreases as the temperature drops which explains why electrolytic capacitors also do poorly at low temperatures.

I have done as Jim suggested when testing a kilowatt amplifier on 80 Meters. The load is useless if the water boils!

Unless I'm losing the plot, the 'innards' of 50 ohm N and BNC connectors
are compatible, and can be mated. This is NOT true for 75 ohm versions.

For N-connectors, there is a noticeable difference in the diameters of
the male pin and the female receptacle (?). The diameter of the 75 ohm
is much less than that of the 50 ohm. If you insert a 50 ohm male into a
75 ohm female, you will splay the leaves and almost certainly case
irreparable damage. However, if you insert a 75 ohm male into a 50 ohm
female, it won't make contact (unless you first cunningly insert a short
piece of wire into the female).

For BNC connectors, 50 ohm CAN mate with 75 ohm, and vice versa. This is
because the dimensions are essentially identical (although the 75 ohm
male pin is sometimes more tapered). The difference of impedance is
achieved mainly by having much less PTFE dielectric in the 75 ohm
version.

As the 50 and 75 ohm BNC male pin is the same diameter as the 50 ohm N male pin, you must never insert either a 50 or 75 ohm BNC male into a 75 ohm N female. However, you CAN insert a 50 ohm N male into either a 50 or 75 ohm BNC female. However, if you insert a 75 ohm N male into either a 50 or 75 ohm BNC female, it almost certainly won't make contact.

It's harder to build a 2:1 balun.. a 4:1 is a 2:1 turns ratio, and
more common (yes, one can do 3:2, that's 1.5:1 turns, 2:25:1 Z)

Generator tests (60 or 400 Hz, multi-KW) are routinely performed with a trailer-mounted device called a load bank, where plates are immersed into a tank of salt water. The depth of the plates determines the load resistance.

> like for this Cycle to come forth ...

I'll be 66 in a few weeks. If I have to wait for Cycle 25 to peak, that'll put me beyond 80. But even with poor propagation, it's never zero, especially on 20m and below, so I do what I can.

I enjoyed a few days of good propagation on 10m last year and I worked into South America barefoot. The antenna was a dipole made of TV antenna elements bolted together and laying on the garage roof. Really.

So refreshing to see someone stating it correctly when all around there are
folk who harbour mistaken beliefs that 50 and 75 ohm BNC pins have different
mating diameters. What I find odd is that so many people who claim the
contrary appear to have unshakable belief, almost like a religion,
irrespective of what the manufacturers' engineering drawings actually show.

I am beginning to suspect that traditionally made baluns are not as exact in practice as they are theoretically. This is not a surprise, really. Few things in electronics are exact as we humans like to assume, as you well know.

Good seeing your post, OM.

> - what am I missing?

The resonant feedpoint of the 80m loop that I modeled
with EZNEC is 115 ohms. Without a 4:1 at the feedpoint,
the 50 ohm SWR is 2.3:1 inviting foldback. With a 4:1
balun, the 50 ohm SWR is 1.7:1 with no foldback. It is
rare for the feedpoint resistance of a loop to be exactly
100 ohms.

Of course, if the loop is fed with high-Z0 ladder-line,
the 100 ohm feedpoint resistance is transformed to a higher
impedance value where a 4:1 balun might be more effective.

For single-band operation, most hams simply feed the loop
with 1/4WL of Z0=75 ohm coax (quarter-wave transformer).

A few measurements out of the bag:

N males

UG-21B/U 74868 (used) .068"
RFI RFN-1007 .065"
CPN-1 .065"

BNC males

AMP BNC59PC .053"
Amphenol 68175 .050"
RFI RFB-1106-2 .053"

Can we see a trend yet or should I continue?

Only in theory. Such things as variances in construction materials from one
batch to another and the variations that one human will introduce to
construction versus another human also induce characteristics that do not
always jibe with theory.

I admit that I am argueing a very fine point here, Dave, but folks without
any electronics education, but who have pursued electronics theory as part
of their amateur radio advocation, are sometimes prone to thinking that
everything is exact. In the real physical world, few things are exact. Ask
any technician or machinist.

Any technician or machinist has only a remote association with exact
anyway. I've calibrated their tools and know how inexact they are.

However, returning to the context of BalUns, a person can choose to
fail, or simply fumble along when it comes to their design,
construction, or application - but this is not a performance fault of
the class of BalUn. Using your 160M BalUn for 1.2GHz work isn't a
blight on the BalUn, but on the user's inappropriate application
(hammering in a screw for example).

The test data I've seen for careful constructions have remarkable
attributes that defy typical construction projects pursuing other
goals. Jerry Sevick's work reveals less than 0.02dB variation of
insertion loss over the HF range for one of his constructions. The
value of insertion loss it does present is less than 0.1dB. The
ability to duplicate his work is not outside the capability of any
individual who writes to this group - but anyone could certainly slop
it into oblivion if care was not high in their mind.

The specs I offered above came of simply opening the book and
describing the first page that offered test results. Scanning further
for better examples yields better examples. As a class, BalUns are
rather exceptional performers.

So, to this casual off-hand remark of BalUns not being as "exact" in
practice as in theory begs the question: "How exact?" When I see
such manufactured controversies conjoined (through other authors) with
turns-ratio, the discussion of BalUn operation is showing stress

fractures in understanding - not theory.

I was considering using a TV type 4:1 balun on 2 meters. Does anyone know how much power these can handle? I remember a guy doing this when I was a teenager(long ago) but I think the baluns were built a little stouter back then than they are now.

Jimmie

Hi Jimmie,

Have your tried researching the archives for this topic? Google's
search tools can easily provide those answers.

What do you have that is
1. a 200 Ohm load, or
2. a 12.5 Ohm load?

Is it balanced, or unbalanced?

Does this BalUn have a pedigree (like Radio Shack's "Best TV") or
could it actually be an FM BalUn?

If it is a TV BalUn, which band?

How much power are you going to apply to the load?

Like I said, we "permanently" adapt N to BNC inside the lab. I've never used an N in a situation where a BNC wouldn't have worked*. I guess the threads make the connection more permanent, but now we have the TNC for that.

*Check that. I did need a 75 Ohm N jumper once to get from a 7/8" line to the back of a Moseley STL receiver.

I wouldn't bother with those.. Tiny gauge wire..
Might be usable for a receive antenna, but I sure as heck
wouldn't use one for transmit.
I bet they are fairly lossy. Also.. they may not work too
well on the HF frequencies being they are designed for
VHF/UHF.

Aside from power and sweep checks on 800 and above (where issues really show) BNC seems to do well. Most RG58 double shielded types seem to be lossy though. Even for short jumper runs. PL259 junctions are completely worthless and measurements are meaningless. Sweeps are impossible because of all the reflections. N can be adapted to anything else with much less loss than from anything else. I was aware of this long before I built my brand new Heath HW-2036 synthesized rig and replaced the RCA phono jack with a BNC bulkhead as I built it.

Some of our more expensive equipment would get a N male to N fem adapter just to save wear on the threads, but N male to BNC fem adapter would be most useful most of the time. It's bad luck to use the internal load when you can use a sample port anyway.

My stock Collins HF amp has an N output connector and it's 40+ years old. BTW it has an RCA phono jack for the input. These actually have better loss characteristics to uWave than the SO239 except for lack of proper retention.

Correct.

http://www.amphenol.com/markets/medical/connectors/rf_coax/bnc.html '50 ohm
and
75 ohm BNC connectors are intermateable'

http://www.radiall.com/radiall/easysite/go/03r-00000a-004/categoryId/1232281
'All versions are fully intermateable'

An earlier post in this thread had suggested otherwise.

Chris

The whole problem is "liking to assume" that things are simpler than they are. When the theory you apply is too simple, guess what -- you'll find that the real thing doesn't behave as your oversimplified "theory" predicts. Theory works just fine, and accurately predicts how a real object will work. Oversimplified "theory" often doesn't work so well.

A well made balun or RF transformer behaves reasonably well like an ideal transformer, that is, infinite winding inductance, no coupling capacitance, zero leakage inductance, no loss, and so forth, but only under quite a narrow range of circumstances. Those circumstances include being terminated with a fairly narrow range of impedances and over a limited frequency range. Usually, one side is designed to be terminated with 50 ohms, purely resistive. That means the other side of a 4:1 balun has to be terminated with something fairly close to 200 or 12.5 ohms (depending on how it's designed), also resistive, in order for it to work as intended. If the impedance differs very much at all from that value, you'll find that the transformation ratio is no longer 4:1, and that the balun will add a series and/or shunt impedance to the circuit. This can be accounted for by theory, but only with great difficulty since it requires careful characterization of the core and windings. People tend to design, and often test, a 4:1 balun in a 50 ohm environment, then attach it to a multiband antenna that has rather extreme (but entirely predictable) impedance variations. Then they're surprised because the impedance seen looking into the balun isn't 4 times or 1/4 times the antenna impedance, but is something wildly different. They shouldn't be. A 4:1 balun or transformer that effects a nice 4:1 impedance transformation when presented with a very wide range of termination impedances simply doesn't exist. Any "theory" that predicts it is oversimplified and invalid.

Googling TV BalUn was useless but searching fot 2M Balun proved more
useful. Per an article by K3MT they should be able to handle power in
the 5 to 10 watt range. More than enough for my purpose. I cracked
open a couple and foundd that tthe type that go frm screw connectors
to male F connector have a larger transformer than the barrel type.
This was at least true for the couple that I sacrificed to the radio
gods.
K3MT"s data was on the barrrel or tubular type.

IMO, the major problem with baluns is that they are
designed for specific impedances and most often used
with unknown impedances.

Hi Jimmie,

So, going further with this resource you found, was there any report
of how "well" it worked? Merely surviving the application of 5 to 10
Watts isn't exactly proof of suitability for performance. Even a SWR
report could mask the fact that a BalUn inappropriately applied is
operating as a padding resistor.

Going further yet, was it reported what style of BalUn it was?
Guanella? Ruthroff? Not all BalUns perform equally, and for
reception (the class of BalUn you are mining for transmission
application) it is arguable that it matters.

Lastly to your first statement
>Googling TV BalUn was useless but searching fot 2M Balun proved more
>useful.
The distinction was useful, but were you Googling the Web, or this
group?

DLoyd wrote:
"Due to the "Inverse Square Law", it was impractical and always will
be."

How much power do you need? Does radio reach the stars? Does light from
the stars reach us by "radio" type waves?

Because the power of a radio wave declines due to distance by only 6 db
each time distance doubles, the 6 db distance can be almost infinite and
the power useable dependent on the power required and and the power of
the source.

K3MT had used them in 2M project so for the time being I will let it
go at that for now. Iam concerned about the cores saturating at that
power level but I doubt if there is a lot of info on it. When I get
off the road in a couple of weeks I will try hooking a couple of them
back to back to a dummy load, putting 10 watts in and seeing what
happens.

The web.

Very true, but often times they work well enough with varying impedances to
get us on the air. If it is that or nothing, then I'm all for doing it.

Thanks for the information!

Ed, good to run into you again! What brought you to Georgia?

Ray - I found a Dover edition of Transmission Lines, Antennas and Waveguides. Thank you for the suggestion!

One final question about the 4:1 balun: Assuming a single band Delta Loop with a feed point impedance of approx 100 ohms, with or without a 4:1 balun you have approximately a 2:1 SWR - so why use the balun?

Thanks and 73,

Tad Danley, K3TD

Hi Richard

I made some insertion loss measurements on some of the low cost TV (4:1)
baluns when I was trying to understand that 137 MHz antenna. I didnt save
any data. I did use several types of baluns. They were all typically the
Radio Shack quality. At 137 MHz, the insertion loss was about 2.5 dB for
two baluns connected in series, back to back. I know that seems high, but

the units are really not well built.
It seems that the original poster, Jimmie, might consider using RFI ferrites around the coax instead of the TV 4:1 baluns. My measured data indicates the low cost ferrites, intended to be used to minimize RFI conduction on the outside of cables, work quite well at 144 MHz.

Hi Jimmie,

Last things first, you should Google in "Groups," specifically this group. This isn't a guarantee, but at least you will land in a thread where discussion will reveal flaws where they exist.

For a core to saturate reveals a misunderstanding of how the BalUn works (it goes to the same correspondents who speak of "turns ratio").

The most effective BalUn provides a high common mode reactance or resistance to current. Hence current in that mode will be low. With low current into a high resistance you have low power dissipation. Core saturation never becomes a problem, and is a distinctly separate issue - although solved through the same mechanism.

The most effective BalUn adds absolutely no differential mode reactance or resistance. Again, where there is high current and no resistance, there is no power dissipation and zero core saturation (for the same reasons, but through different mechanisms).

Practical BalUns have some residual reactances and resistances that they add to the transmission circuit. A Ruthroff BalUn design even purposely introduces this to its own limitation (and no advantage over other designs). The Ruthroff design invites core saturation. A Guanella BalUn seeks to be the most effective design to its advantage over the Ruthroff. The Guanella design suppresses core saturation. There are limitations, of course.

You can still flame out a Guanella if the core reactance/resistance is under designed, or your load is unbalanced and not suited to the transformation ratio. This can be aided through choking the input to the BalUn (which serves as a choke, too, for controlled loads).

The back-to-back test is useful. Take one BalUn between a finger and thumb and count to 10. If you don't raise a welt, then they probably are not too lossy.

May I suggest using a coaxial cable 4:1 balun instead of ferrite core
type. A 1/2 wave electrical length of coax cable, some soldering, and
you're done. For just 2 meters, the bandwidth is just fine and the
loss is no more than that of the coax cable. For low power, small
diameter RG-174 type coax is fine. I use 4:1 coax baluns for matching
300 ohm folded dipole antennas:
<http://users.belgacom.net/hamradio/schemas/14balun.gif>

The common TV balun has two xfomers inside, which are sometimes
combined on a single core. See schematics at:
<http://members.tripod.com/rclindia/trans.html>
<http://www.electronics-tutorials.com/basics/baluns.htm>

However, if size is an issue, I guess the coax balun is a bit large.
For just 2 meters, the ferrite core is not necessary. Just find a
block of PTFE (Teflon) or plastic, and drill it to resemble the TV
balun core, use 2 PTFE toroid cores (if you can find them), or
simulate a torroid with a stack of nylon washers. Then wind the 2
pairs of 2 wires through the holes and bring out the connections.

I was rummaging through my mobil junk er toolbox and came across an
old package of air core TV baluns. These date back to the day when
TVs were usually fed with twin lead. Tuesday I may be able to get to
some test equipment to check out the losses on those. Gee getting to
spend a 3day weekend on the road is such fun.

The resonant feedpoint impedance of a loop is often a
little higher than 100 ohms, e.g. 115 ohms according to
EZNEC, in which case a 4:1 balun will lower the SWR -
sometimes alleviating foldback problems.

Jeff, Apparently TV matching transformers used to be air core and
their use was quite common on 6 and 2 meter antennas.I knew the ones
built into the old tuners were but I hadnt thought the old line
transformers also being air core.They were per some of the locals on
2m repeater. If they aare the ones I am thinking of(big fat ones) I
have a few at home.

Not on any 2m or 6m antenna I've seen or build. Most of what I've
seen used T-match, hair-pin match, gamma match, or something similar.
For the vertical collinears, I used a tapped coil. If I wanted lots
of bandwidth, perhaps a ferrite core might be useful, but for single
VHF band antennas, it's a lossy waste.

The over-simplified idea behind the ferrite (or powdered iron for HF)
cores is to increase the inductance of the windings so the xformer
works at lower frequencies. At VHF and UHF frequencies, the core
mostly disappears and you're relying totally on the coupling between
the bifilar windings.

Actually that is not the mechanism at all, simplified or complexified.

Ferrite compounds for BalUn application principally add resistance to
the common mode path and have (as a design goal) absolutely no
magnetic influence whatever. The increase of inductance is haphazard
at best, and some ferrite compounds actually increase the capacitive
reactance. As such, ferrites are not principally employed in building
inductors. Further, iron cores don't serve much purpose for choking
which is the principle requirement for BalUn input to output
isolation.

If you want to build an iron core, magnetic linkage transformer (AKA
audio or power transformer), this is a very different beast from a
BalUn, and a miserable replacement.

When designing any transformer, be it audio, power, or RF, you usually want to accomplish three things:

1. Maximize the winding impedance.
2. Minimize the leakage impedance. This is another way of saying you want to maximize the coupling between the windings.
3. Realize an acceptably low loss.

At low frequencies, most cores primarily provide inductance, so most literature dealing with transformers speaks of "inductance" rather than "impedance" when discussing the basic goals. But low frequency transformers could be made and would function just fine using resistive core materials if they were available. The third goal can be achieved with resistive materials as long as the first and second goals are accomplished well enough. That is, if the winding impedance is high enough, the magnetizing current will be low, so I^2*R loss will be low. And if coupling is good, increasing the current in one winding won't

appreciably increase the core flux and incur extra loss.

But at RF, as Richard says, many ferrite cores are more resistive than inductive. Not all are -- there are high frequency ferrites that remain inductive at very high frequencies. However, for the HF range and above, the best choice is usually "low frequency" ferrites which are primarily resistive in that frequency range. They're best for two reasons -- first, they provide much more impedance per turn squared than high frequency ferrites, making the first two goals much easier to achieve; and second, there are no resonance effects. An inductive winding will resonate with stray capacitance at some frequency. The impedance drops above that frequency, limiting the upper range of the transformer. The winding and leakage inductances can also resonate with external capacitance and cause ringing in some applications. A properly designed transformer using an essentially resistive core can operate very well over several decades of frequency.

For most RF applications, it's not hard to design a transformer or balun that will have well under 1 dB of loss, which is negligible again in most applications. But if high power is involved, even a fraction of a dB might represent several or may watts of power, resulting in intolerable core heating. In those applications, lower loss, i.e., more inductive and less resistive, cores have to be used, often resulting in more difficult design and/or reduced performance in other respects.

Resistive ferrites are also often good choices for RF chokes for the same reasons that they make good transformers.

High-Q inductors and tuned transformers are a different critter, though. For those applications you want to use very low loss, that is, inductive and not resistive, core materials. This often leads to confusion, since ferrite manufacturers have traditionally specified a "recommended" frequency range for various materials which refers to the best range for these applications. The best material for an RF transformer is usually one with a "recommended" (for high-Q inductor applications) frequency range well below the transformer operating frequency.

Actually there are a lot of solar cycles, 7 year, 11 year, 13 year,
and more. Not all have much to do with sunspots though. One is
correlated with human heartbeat for no reasonable reason.

A planetary magnetic minimum may produce much higher ionization in the
ionosphere. No bets on any of this, just wild speculation.

526. improve S/N for AM car radio by a factor of 2...5...10?

Newsgroup: rec.radio.amateur.antenna
Date: 2009-01-19 21:15:11 UTC
From: runcyclexcski@gmail.com

Source record: 18149

Hi all,

I've looked on the web, but with very little success. I have never posted to this group before, so I apologize if my question is lame.

I listen to the Bay Area's KGO 810 MHz a lot. Their transmitter is located in South San Fran Bay near the Dumbarton Bridge, and outpus 50 kW (that's what they say anyway). I am guessing, it's directed mostly at the Pacific coast line. I often listen while driving east on I-80 to Truckee/Tahoe for skiing and camping. Usually the signal fades substantially by the time I reach Sacramento - but it's still tolerable listening (by ear, S/N of ~3). By the time I reach Auburn it's essentially inaudible. Much better signal at night (~again, by ear, S/N improves by ~2). At night, I can sort of pick up words in truckee.

Question: can I *substantially* improve the S/N - say, factor of 2/5/10 by installing a better car antenna, so that, say, I could listen in the Sierras day and night? I do not care if the antenna is huge/geeky_looking, my car is being driven into the ground anyway. I would be happy to make this a DIY project - to save on $ and learn about radio. What kind of specs should I look for? I.e. I don't want to go on the web and blindly buy an antenna advertised to "boost" your AM radio reception - I would want some numbers.

I have limited knowledge in electronics, my background mostly is in biophysics and biochemistry. So if you steer me into the right direction I think I should be able figure it out.

That's a good one. I am often in places with no cell reception. I originally discovered KGO when I lived in La Honda, CA - it was the only radio station I could easily pick up. No cell reception and no FM there.

Presumably you mean 810 kHz. What is the source of the noise? Noise generated in the receiver is usually insignificant in the medium-wave band. If the cause is other transmissions on the same and nearby frequencies you may not gain much by changing the antenna, but a receiver with better channel (IF) filtering may help if there is any contribution from adjacent channels. If the noise is coming from your car (does it improve when you park in a rural area) then you may need to improve the RF suppression of its circuitry (e.g. ignition if it's a petrol engined car).

I expect you can work out what tests would be needed to locate the principal sources of the noise.

Yes, KHz, sorry.

The noise goes up several fold when I pass underneath bridges/pass big
trucks, etc. Does this suggest that the noise is from other
frequencies?

No. It means that the noise is coming from outside your car. Your antenna and radio can't tell the difference between this noise and the desired signal, so improving your antenna or increasing your receiver's sensitivity will simply increase the signal and noise in the same proportion. And because it's not coming from your own car, there's no way for you to reduce the noise. In other words, there's really nothing you can do to improve the S/N ratio in the presence of that noise.

Is there anyway to "filter" the 810 frequency somehow?

Hi

Are you certain that the noise increases? I suspect the "signal"
decreases. It is entirely possible that the antenna on your vehicle is
inadequate.
Car antennas are *not* simple. They do appear simple. They often appear
to be a whip mounted above the fender. The way that fender whip is
connected to the receiver is critical.

Depending what type vehicle you have, the increase of sensitivity to 810
KHz could be to mount a stub atop the fender and connecting it to the
receiver with a Low Capacity coax line. In addition, the receiver can be
tuned at the place where the antenna connects to the first amplifer to
maximize sensitivity to 810 KHz.

Many new cars include an amplifier at the base of the antenna to increase
sensitivity.

Are you open to taking your car to a specialist to let them try to tune
your "antenna" to your receiver?

Does it do this for KKOH as well? Try 780 and see if it exhibits
similar behavior. If not, it's the KGO signal. They are pretty anemic
to the East North East.

2.5, 0.5 and 0.15 mV/m contours. It still should be usable in
Sacramento. Something is wrong.

When you're in Sacramento, have some other driver try their vehicles
AM radio on KGO and see if it's the same. If it's better, it's time
to go shopping for a new radio or a new antenna system on your
vehicle. In particular, try to find a real short wave radio with an
ignition noise blanker, to use for the comparison. Also try it with
the engine off and see if things improve. If all the other radios and
conditions sound roughly the same, give up.

Incidentally, there's usually an adjustable trimmer capacitor to tune
the car antenna somewhere on the radio. It's usually hidden behind
the volume or tuning dial (on older radios with dials) or right on the
front panel on later model radios. Find a weak station and tune for
maximum.

>Question: can I *substantially* improve the S/N - say, factor of
>2/5/10 by installing a better car antenna, so that, say, I could
>listen in the Sierras day and night?

No. Look at the map. You're in fringe-land in the Sierras. The only
way that's going to work is if you get away from local noise sources
(i.e. engines, get a decent antenna, and if propagation is in your
favor). It's possible, but not guaranteed or reliable. Back when I
was getting started in radio, I was a SWL (short wave listener) which
included listening to distant AM broadcast stations. I could hear the
world, but only at random times, not for very long, and certainly not
with armchair listening quality.

Strangely enough, some practice listening to a noisy AM station may
actually improve the quality. I was out of radio for perhaps 15
years. When I dived back in, I couldn't understand anyone on the
radio. It took about a month of listening to "tune" my ear so that I
would mentally ignore the noise and interference. The same thing
happened when I spent 10 years driving back and forth to Smog Angeles

twice a month. I would listen to KSCO on the way. The more I
listened, the better the station sounded.

>I do not care if the antenna is
>huge/geeky_looking, my car is being driven into the ground anyway.

A big antenna may not help much. It will pickup more signal, but also
more noise. The ratio of the signal to the noise will remain roughly
constant, resulting in no net improvement.

>I have limited knowledge in electronics, my background mostly is in
>biophysics and biochemistry. So if you steer me into the right
>direction I think I should be able figure it out.

You might look into satellite radio (XM/Sirius). They don't have KGO
but might have equally useful or interesting programming. The nice
part is that it works anywhere.

On the other hand, if you don't need current listening, just have
someone record a days worth of KGO in MP3 format, and play it on a
cheap MP3 player. It may be a day late, but unless you're into the
news, weather, traffic, or sports, it probably doesn't matter being a
day late.

I think you are confusing the polarity of the ferrite rod with the polarity
of the E field of the ferrite rod antenna- they are not the same.

The noise is also at 810 kHz.

Noise can sometimes be separated from a signal at the same frequency if there's some distinguishing characteristic of the noise, like fast rise time or a periodic nature, so it can be selectively removed. One device that can do this for a few special noise types is a "noise blanker". Modern audio signal processors (or "digital signal processors" - DSP) are considerably more sophisticated and can remove a wider range of noise types. But good ones aren't cheap, and probably not easily adapted to your radio. And they do best when the incoming S/N ratio is reasonable. You'll be encountering a pretty wide range of noise sources as you drive along, so I doubt that any kind of processor would be very successful at removing all, or even a substantial portion, of them.

I needed to abandon my van's fender-mount antenna because the shield ground broke and AM reception was pretty awful, with spark plug noise and assorted clicks and pops whenever I wasn't parked.

I got a connector adapter which plugged into the antenna jack on the back of the radio. I connected a VHF magnetic mount ham radio antenna to it. I now have a cable running between the bucket seats and out the back door but I have really good AM/FM reception. On long trips, like across the southern deserts, I unscrew the standard element and replace it with a longer element (about 4') and AM reception is improved dramatically. The cable from the fender-mount antenna dangles inside the dashboard, unseen and unused.

If you think you might tackle such a project, post again and I'll provide more details. Having a limited knowledge of electronics is not a problem; finding just the right parts is.

A classic non-answer, I think!

If someone asks question like this, I reckon that they probably know
nothing about E and H fields, and I would attempt to give a simple (but
essentially factual) answer using layman's terms.

So, Dale Parfitt, maybe you would like to have another try?

Agree. The link below leads to an example of the noise on a weak, daytime AM signal received from WBBM, Chicago (50 kW non-D on 780 kHz) on a Sony ICF-2002 with its internal antenna, indoors in an urban location. The groundwave path from WBBM to the receiver is about 225 miles in length. According to the FCC propagation curves, WBBM has a daytime groundwave field intensity of about 0.14 mV/m for this path (probably less in an urban area).

The noise in this MP3 clip maybe is tolerable for short-term listening, or if there is nothing better receivable.

The recording was made Jan 10, 2009 at about 12:30 pm CST.

On a lot of AM auto radios the SN ratio really stinks and an external
preamp especially one with some preselection can really help. As
previously stated on radios with adequate sigal to noise ratio adding
a preamp just makes things worse.

A ferrite rod antenna responds to the magnetic-field component of the radio wave radiated by the transmitting station.

All significant AM medium-wave and long-wave stations use one or more vertical conductors as their transmitting antenna and the current passing through this conductor generates a magnetic field. The current path is vertical so the resulting lines of magnetic force are loops surrounding this vertical path - that is, loops in planes parallel to the surface of the earth. Some distance away from the transmitting antenna, the outgoing radio wave can be described by a magnetic field component aligned the same as these loops, that is horizontal lines at any point of inspection, or by an electric field component aligned perpendicularly, that is vertical. By convention, the 'polarisation' of a single radio wave is the direction of its electric field component and vertical polarisation is used for MW/LW because it yields much better range for the same power than horizontal polarisation (which would try to develop an electric field on the surface of the conducting earth).

To couple power out from this radio wave requires a coil or loop to draw current from the magnetic field or a dipole to derive voltage from the electric field (from which to draw current). A coil couples to a magnetic field when the lines of magnetic force pass through it ... so your ferrite rod antenna works best when it is aligned with its axis horizontal.

I have done the same thing with a spare 2 meter 5/8 whip (without the base matching coil) on the roof with excellent results. The length is little longer than stock. I used to own an older European car that had a 3 section whip that was nearly 5' long fully extended and I wish I could find another. A 102" CB whip will do better on AM (although less optimal for FM). There used to be CB/AM/FM splitters for truckers, but I don't know how well they work. The stock whip is far short considering the wavelength, so the longest you can get on the car will only improve the capture area. As mentioned, you will notice a peak if you adjust the trimmer in the radio to your new antenna. They are usually peaked for 1300 kc anyway, so that might be something to toy with first if you don't mind sacrificing the high end of the band. An HF antenna with tuner would be the best you could do. In the campsite, you can clip a longwire on and throw it in the trees.

Hams have a affinity for powdered iron cores in RF applications, mislead
by the thought that low loss material naturally produces a better
solution. Thing is that it is a huge leap from low loss *material* to a
low loss *solution*.

Here is a recent design for a Guanella 1:1 balun for 6m and 2m on a #61
ferrite core: http://www.vk1od.net/balun/G1-1-FT140-61/index.htm .

The article contains a graph of the material characteristics, which
shows that at 2m, &#65533;' has fallen to 10% or so of &#65533;i, and &#65533;" has risen,
so an inductor will be more resistive than inductive.

But, does that make it a poor TLT? Not at all, it has very high common
mode or choking impedance (a critical performance parameter that is
rarely reported for commercial baluns).

Would such a balun wound on a powdered iron core work better? Probably
not. I say probably because I have been unable to find manufacturer's
loss data for powdered iron materials above about 5MHz. The probability
is that a powdered iron core would yeild a balun with a choking
impedance that is lower and more inductive than resistive and may likely
be *more* lossy. (I have a prospective project to measure a couple of
powdered iron cores at 6m to further explore this, but they will not be
lab grade measurements.)

The key is in thinking about I^2*R. The lossy ferrite balun has very
high Z, so very low I, very high R, and the product of I^2*R is

relatively low. A powdered iron choke will have lower Z, so higher I, low R, and the product I^2*R may be quite higher than the ferrite.

Higher choking impedance can reduce loss, even if the higher choking impedance is by way of a lower Q inductor. The characteristic is a curve, concave down and the trick is to choose a design (whether it is powdered iron, air cored, or ferrite cored) for acceptable loss, and that often means an operating point that is well on the right hand side or the left hand of the curve maximum.

Another facet of ferrite TLTs operated in their lossy region, is that they remain useful well above the device self resonance, whereas when choking depends on a high Q impedance, it rapidly falls above resonance. (Self resonance is ignored in most models of balun performance that I have seen.)

I wouldn't say that. Most all the auto AM radios I've had were
quite good. Always plenty of sensitivity as long as the antenna
was functioning correctly.
The current car I'm driving "Corolla" uses a small helically wound
antenna, which is at the rear of the roof. It's pretty short overall,
and I still have plenty of sensitivity. The daytime is the best time
to check that, and I've never had any trouble receiving out of
town stations. And if I tune to an open frequency, I hear background
atmospheric noise, so any increase in sensitivity is pretty much
useless. I've had older Delco radios in cars and the AM was
excellent on those.
If the OP can hear background noise when tuned to an empty
frequency, and not have it sound "dead", adding more pre-amp
is unlikely to help.
I think the main culprit in this case is propagation, and the
pattern of the array, and unfortunately, I think he's basically
out of luck. Normally you would probably be able to hear the
ground wave out to at least 200-300 miles in the daytime,
but that assumes a fairly stout signal. If the pattern is away
from that direction, even the ground wave possibilities start
to look kind of bleak.
If an auto AM radio does not have enough sensitivity, it usually
means there is something wrong with it, or the antenna.
Most as they come from the factory have more than enough.

Like ferrites, powdered irons come with a wide range of characteristics. Micrometals (http://micrometals.com) makes the popular -2 (red), -6 (yellow), and other cores which are very suitable for high-Q inductors at HF, as well as lower frequency mixes. I have a book of "Q curves" they published which characterizes a number of inductors to fairly high frequencies. But for most of my work I've simply wound inductors and measured their Qs with a simple home made Q meter. I use -6 and to a lesser extent -2 cores for inductors in nearly all HF filter and matching applications. I've used lower frequency powdered iron cores for RF chokes. They behave a lot like low frequency ferrites, but are characterized by tolerance of very high flux densities. I'm sure that some low frequency powdered iron cores would be fine for baluns and broad band transformers, but they're not nearly as available as ferrites and high frequency powdered iron cores.

I highly recommend that anyone anticipating using ferrite or powdered iron cores invest in an "antenna analyzer". It allows a very quick and easy characterization of cores at the frequencies of interest.

So in receiving the AM BCB frequencies in the united states, a vertical antenna is 'generally' preferable over a horizontal antenna? The above is based on having a receiver without any internal antenna.

If an AM BCB receiver has NO internal antenna, then almost ANY
external antenna will improve its AM BCB performance.

The greatest improvement in that performance will be achieved when the
intrinsic E or H gain of the receiving antenna matches that of the
radiated EM wave (in the US, or elsewhere).

Not only the USA but world wide -- the laws of physics are the same everywhere. During the day, propagation at BCB frequencies is by surface wave. Only vertically polarized waves propagate this way, so all AM broadcast stations use vertical antennas to produce vertically polarized waves. These are best received with a vertically polarized antenna.

At night, AM broadcast signals can be propagated relatively long distances by being reflected or refracted by the ionosphere. When that happens, the polarization is rotated in a seemingly random fashion, so horizontally polarized receiving antennas aren't at such a disadvantage.

What's "intrinsic E or H gain"? In what way does it differ from gain calculated relative to an isotropic source? How does one calculate the gain of an EM wave?

The helical on some antennas is for wind noise.

I can speak from an experience I had.

I needed better reception on a car radio because I lived in a rural
area. This was years ago but might still apply

I installed a full height 1/4 wave cb whip antenna. I ran the same coax
that came with the original antenna. My radio had a tuning capacitor in
the back of it.

I peaked for maximum signal. Voila, it was much better.

If there is no tuning capacitor in the back of your radio, I suspect
this fix will not work at all.

I don't think mine is, but I'm not sure. It's basically the
same setup as any other antenna, just the whip is
shorter, and helically wound, I suppose for tuning purposes.
I guess it's about 15 or so inches long. I'd have to measure
it. Of course, it also functions for FM too.

Nobody prevent you to add it externally, i think.

BTW... curious to know if any ferrite antenna or 2x ferrite antennas in a
sort of cross-coupled way mounted in a waterproof container perform better
than whips. I goggled, but can't find a gain table for ferrite antennas vs.
dipole, or a medium dBI gain (negative, i suppose) for ferrite antennas
mounted into the commons consumer radios.

Amongst several other factors, it depends how you combine the signals from two crossed ferrite rods/coils - simple in-phase addition of their signals won't yield a radiation pattern that is omni-directional in the horizontal plane.

Magnetic antennas are sometimes considered beneficial for mobile reception of medium/lomg-wave signals because they can be made insensitive to electric fields, and evidence can be found of greater fluctuation of the electric field of the wanted signal vs. the magnetic component. Also, some forms of interference are found to present stronger electric fields than magnetic ones. However, obtaining the requisite omni pattern isn't trivial.

A magnetic antenna was used in all of the California
75m mobile antenna shootouts that I attended. I was
told it was to keep the close-by human bodies from
having an effect on the strength of the received signals.

Which leads me to a question: Most of us OFs have
witnessed the effects of human bodies on analog VHF
TV signals being received using rabbit ears. If we
used "magnetic rabbit ears", would the problem go
away? Is it only the electric field that varies when
an EM signal passes through a non-magnetic medium
like a human body - or a tree?

I understand it becomes increasingly difficult to create a purely-magnetic antenna as the frequency rises, and ferrite with the required properties becomes progressively more expensive! Some VHF pagers used ferrite rods, and one or two-turn coils. Screened one-turn loops are used in the short-wave bands, by some amateurs as well as by the military (e.g. British Royal Navy).

I have a question about how to calculate VSWR/ReturnLoss of a hybrid antenna/feed line sysem which include bottom jumper, pressure window, wave guide, upper jumper and antenna? I list the parameters of all the components as bellow for an actual instance:
VSWR InsertionLoss
Antenna 1.06
Antenna Radome 1.01 0.4
Top Jumper 1.03 0.09
Waveguide 1.06 2.36
Pressure Window 1.01
Bottom Jumper 1.03 0.09

Could somebody help me get the ReturnLoss/VSWR at the end of Bottom Jumper for the entire system? Thanks.

The problem is that you need more information than you have here.
Let's reduce this to the case of just two components, a load that
shows a 1.10:1 VSWR relative to the system reference resistance
(commonly 50 ohms), and a transmission line that shows a 1.10:1 VSWR
at the "input" end when terminated with the system load resistance at
the other end. But the 1.10:1 can represent either of two
resistances, or any of an infinite set of reactance + resistance that
represent a constant magnitude but arbitrary phase angle reflection
coefficient.

For example, with a system reference resistance of 50 ohms, the 1.10:1
SWR load might be 55 ohms. And the transmission line might be 90
electrical degrees of 52.45 ohm line (well within tolerance for RG-8
type 50 ohm line); it would show 1.10:1 SWR with a 50 ohm load. But
if you put the 55 ohm load at the end of that line, you'd measure
1.00:1 SWR at the input end of the line. On the other hand, the line
could just as well have been 90 electrical degrees of 47.58 ohm line,
which would also show a 1.10:1 SWR with a 50 ohm load at the far end;
but if you put your 55 ohm load on that line, you'd see a 1.21:1 SWR
at the input end of the line. In this example, I've just used things
that evaluate to pure resistances; in practice, they could also
include reactance.

So in summary, without more information about each component, you
can't arrive at an unambiguous answer to your question. You really
should characterize each one-port in the system with its S11, and each
two-port with its full S-matrix; then you have enough information,
ASSUMING no other coupling than at the ports you used to characterize
each piece. But even that's not always the case--and commonly isn't

the case for antenna systems.

Cheers,
Tom

The way I look at it, there is no such thing as a "magnetic" antenna.
As an example, some call shielded single turn loops "magnetic"
antennas. They claim special properties such as lower noise reception.
But this is not the case. They receive the same s/n ratio as any other
single turn loop.
The only advantage the shield provides is inherently good balance.
Good balance improves the depth of the nulls.
But you can construct plain wire single turn loops to have just as
good balance if you use good construction.
I've side by side compared the two, and came to the conclusion
most of the theories about shielded or so called magnetic loops
to basically be a myth.

Have available the AT-271 Military Collabsible Antenna.... $30 USD Plus Shipping

This portable antenna can be used for the top section of a Vertical Antenna OR Horizontal elements for an Antenna System such as the Buddipole tm ..... A Great QRP / Portable Antenna weighs only 400 Grams [14 Oz] and measures 104" extended yet only 14" long when folded.
The construction is the same as is used for sectional fishing poles. Each of the 8 hollow tubular metal sections has a plug one one end and a socket on the other end. All the sections are connected by a string made of either a cloth or metal cord. At the bottom of the base element there's a spring inside the tube to tension the cord. Some units may use an elastic shock-cord material. This way all the elements are kept in order when they are disconnected from each other and are held together when assembled into a 104" [8.6 Ft] long antenna. When the elements are folded or disassembled the package is only 14 inches long.
The base has a male 3/8-24 thread which is the same as is used on most Ham Radio and CB antennas. Some sort of spring base could be used when this antenna is used because the hollow antenna elements will "fold" if too much force is applied to them.
These units are in Like New Condition.. Sold AS-IS but will not be DOA.
Have access to more...ASK!

Pictures on www.rodemi.com

You need to fully characterize each component with 2 port S parameters.
You can then determine the cascaded parameters by the use of T
parameters. You need a vector network analyzer to acomplish
this. The procedure is described in HP's application note AN-154
"S parameter Design", available at:
http://www.hpmemory.org/ressources/resrc_an_01.htm#

The way I look at it, there is no such thing as a "magnetic" antenna.
As an example, some call shielded single turn loops "magnetic"
antennas. They claim special properties such as lower noise reception.
But this is not the case. They receive the same s/n ratio as any other
single turn loop.
The only advantage the shield provides is inherently good balance.
Good balance improves the depth of the nulls.
But you can construct plain wire single turn loops to have just as
good balance if you use good construction.
I've side by side compared the two, and came to the conclusion
most of the theories about shielded or so called magnetic loops
to basically be a myth.

I believe the issue is that if an open loop isn't perfectly balanced then it
will respond to an electric field, acting as a monopole. Then, when the
loop is oriented so the magnetic field of a signal should be in one of its
nulls, the cancellation may be incomplete because of sensivity to the
electric field component of that signal. Screening the loop overcomes this
effect so it could be claimed that screening improves the balance, although
this isn't what's really happening.

With a pair of screened loops and a whip it is possible to receive
separately the magnetic and electric fields associated with a radio signal
and to record their strengths at different locations. This can reveal
significant differences on account of building and electrical clutter, but
only if the loop is adequately screened. No myth!

What you describe is a direction finding system with a general antenna
that can be switched in to sniff for a transmitter to take a bearing
on. A commonplace design for this application. The loops are no more
screened than any other, and careful observation of their construction
details would reveal the necessary break in the screen which serves
for balance only. Any claims to magnetic field separation are, as
Mark well put it, a myth.

The only way you could achieve this separation is by traveling at the
speed of light with your antenna in that magnetic field, at its 90
degree peak to the electric field null. This reduces the topic from
the status of myth to that of absurd.

> --
> 73, Cecil http://www.w5dxp.com

I'm not sure without looking into it, but I notice this with
both shielded, and unshielded loops.
As an example, my 44 inch per side 5 turn diamond
loop prefers to be fed horizontally vs vertically
when receiving MW stations which use a vertical
transmit antenna.
IE: I feed it at the middle lowest corner.
If I feed it at a side corner, which would be vertically fed,
I seem to remember it not working near as well.
Do you consider an open small loop "unshielded" a
"magnetic" antenna? Some do, but I tend not to.
They act the same as the shielded loops that many
seem to call "magnetic" antennas.
The ability to respond to mostly the magnetic field
vs the electric field only pertains to the very near field
within about 1/10 wavelength.
Within 1 wavelength they often respond more to the
electrical wave. In the far field they should respond
to both fields the same as any other antenna.
Or this is my current understanding anyway.. :/
So using any type of "magnetic" antenna for the OP's
purpose would seem to be a waste of time unless
they are trying to reduce noise pickup that is within
1/10 of a wavelength away.
I know myself that these small loops are still quite
capable of picking up local noise, just like most
any other antenna. The only advantage are the sharp
nulls which you use to get rid of said noise.
If your mobile tests were within 1/10 of a wave,
maybe it makes more sense. But I'm not sure if
I can see any advantage to trying to receive a far
field signal vs any other antenna unless the nulls

are useful.

David
Just for the record, skin depth is proportional to frequency
Thus for very hight frequency the skin depth is exceedingly small
This tells us that the effect of eddy current with respect to the
diameter
is NOT infinite but limit dependent on the applied frequency.
I am not extending this thread, but on rereading it is obvious to me
that
there is a boundary within which a current could possibly travel. But
since the current is zero
at the end I am more inclined to think that applied current is
balanced at the source so that zero current is inevitable at the end
of the radiator, How this is done appears to be something like
a pump action which with laminar flow creates cavitation resistances
in line with Bernoulis theorems.IE velocity changes that are
dependent on distributed load losses of the radiator
The end of this thread !

Hi Richard

I could no doubt look this up but thought I would be lazy!

What is the link budget for deep space probes like? What is the RX level
on earth etc etc? I had always assumed a low datarate and nitrogen
cooled front ends on the ground but I dont actually know what the
numbers are...

I kind of already know the numbers for AMSAT and EME work.

If you dont know off the top of your head, I can look it up...

Hi Mark,

That would seem to indicate you seriously unbalanced the antenna by
the side feed which is geometrically unbalanced. For instance, the
line doesn't lead off horizontally for any great distance, does it?

Of course, this all hinges on what you mean by not "near as well."

No, the loops were commutated in order to provide an omni-direction pattern
in the horizontal plane and the receiver was switched between the loops and
whip to measure H and E. This was used to establish for medium and
long-wave broadcasting stations (in the UK) the field strength and
receivability on ferrite-rod antennas.

The loops are no more
> screened than any other, and careful observation of their construction
> details would reveal the necessary break in the screen which serves
> for balance only.

The loop has to be split at some point to prevent it acting as a shorted
turn - the splits were at the top in this case.

Any claims to magnetic field separation are, as
> Mark well put it, a myth.
>
> The only way you could achieve this separation is by traveling at the
> speed of light with your antenna in that magnetic field, at its 90

In a normal single, plane-polarised, far-field TEM radio wave the peaks of E
and H occur at the same places and the same times, and the nulls of E and H
occur at the same places and the same times. The peaks of both correspond
to the peaks of current in the transmitting antenna by which they were
generated, and the nulls of both correspond to the zero-crossings of the
current. If you believe something is radiated in the far field when the
current in the antenna is zero I would be intrigued to hear an explanation.

This reduces the topic from
> the status of myth to that of absurd.

You're entitled to your opinion.

I'm not talking about coaxial loops. I'm talking about
coils of wire wrapped around a ferrite rod typical of
AM radios. Seems pretty obvious it is responding to the
magnetic field when it needs to be at right angles to
the transmitting monopole (or dipole).

The description you offer in rebuttal says nothing of field
separation. The commutation discussion imparts nothing to the
physical relationship of the wave. The remainder of the description
doesn't actually describe any physical/geometric relationship to the
wave at all. Physics in the UK are not different from the rest of the
world.

This, too, is merely conventional design then.

You haven't described anything out of the ordinary, and the ordinary
(spanning centuries) has not shown the attributes you describe as
field separation.

>You're entitled to your opinion.

As are you, but this isn't rec.radio.amateur.antenna.polls and you haven't gone beyond unsubstantiated claims.

If the necessity of proof for your claims were set aside, Nature still demands that noise and signal still arrive by the same mechanism and any invention that separates fields must apply them equally to both sources - returning us to the conventional observation that S/N hasn't changed one bit. The net result of this is that you have provided unsubstantiated claims for an useless invention. Any value it may have comes by conventional means.

Hi Richard,

Are your powers of perception waning by any chance? Your correspondent deserves more credit than you're allowing him. As far as I've seen in this thread, you're the only one talking about 'field delamination' or such things. As you said, what he is talking about is purely conventional. And clever. That you apparently don't completely understand what he is saying is no fault of his.

Returning to your complaint:
>That you apparently don't completely
>understand what he is saying is no fault of his.

As christofire's quote above is his and not mine, and neither you nor
he has explained it, my comprehension is not tested beyond what his
unconventional statement has offered. If he cannot explain it, then
the fault is not with me. Challenging blank assertions is not unusual
here.

Perhaps you mis-perceived:

I don't see how you could be receiving the magnetic
field if say you are 150 miles away from the station.
I looked around on the web for other opinions, and
ran across a page from W8JI.
http://www.w8ji.com/magnetic_receiving_loops.htm
I tend to agree with him.
Here is one quote that seems to fairly well explain
the position.

From W8JI web page..
"Acceleration of charges causes a very unique force
on other charges in the Universe. We call this effect
electromagnetic radiation. It is a totally different effect,
and it is independent of induction fields. This is the only
effect or force that works to move charges at a very
large distance, and it cannot be created by mixing
induction fields. "

Anyway, that's about as good an explanation as I
can find as to why I don't believe in "magnetic" antennas,
except for the properties at very close distances.
At any greater distance beyond about 1/10 wavelength,
it all goes out the window.
That's the way I see it on January 22, 2009 at 7:55 in
the PM. :/

Not sure.. I don't the the position of the feed line should
have been a problem, but it's been so long since I tried it,
I forgot what happened. I just seem to remember trying it
one time, and stuck with the bottom feed.
I'll have to try it again later. I could use my circular 16 inch
dia loop. It's small enough I can easily hold it and shift the
polarization just by rotating it.

Doesn't matter much. Maybe a slight difference in Q with thin
vs fat wire, but overall no big deal.
I've got loops made from thin copper motor wire, and also
one from insulated #14 gauge stranded house wire. They all work.
From a mechanical standpoint I think a diamond is easier
to deal with..
Here is one of my favorite designs for a cheap simple PVC
loop. You can slap one together pretty fast. Kind of like PVC
tinker toys.. :/ You do have to drill the holes, but that's easy.

Isn't the point that an electromagnetic wave can be considered in terms of the E or H fields associated with it, or indeed both at the same time? If any power is extracted from the wave then this will involve E and H, or voltage and current, simultaneously. And when the wave encounters a region of space with effective relative permittivity or permeability different from the free-space values, the ratio of E to H changes; that is, the intrinsic impedance, Zo changes locally. The work I described earlier contributed to the development of propagation prediction methods for medium and long wave transmissions and an example of a region of space that exhibits a particularly inductive effect is a built-up city with many tall buildings.

I'm aware of issues involved in claiming generation of separate E or H fields, as has been described by Kabbary et al in their 'crossed-field antenna', but surely the issues concerning a receiving antenna are different? A very short monopole attached to a high-input-impedance amplifier, for example (i.e. an 'active' antenna), should have very little effect on the local intrinsic impedance, yet it should produce a signal proportional to the magnitude and sign of the local E field, whatever the local H field strength. Equally, a small-diameter well-screened loop should be capable of measuring the local H-field strength without altering the local Zo. In these cases, 'short' and 'small' are relative to the wavelength.

Rohde & Schwarz used to sell an HF diversity receiving antenna system based on an array of small screened loops, the screens of which were applied (separately) as active monopoles. This provided somewhat separate reception of the E and H fields associated with the incoming radio wave and, from what I've heard, it worked - it provided some degree of 'diversity gain'. However, this was an array requiring a sizeable amount of clear land.

Perhaps the difference is that what I described before was for use with broadcast signals (following the topic of the OP), in which case short and small antennas can be used for measurement purposes within areas provided with adequate (or nearly adequate) field strength, whereas in amateur radio applications the tendency would be to use as large an antenna as possible, to maximise the possible range.

Chris

Anyway, that's about as good an explanation as I
can find as to why I don't believe in "magnetic" antennas,
except for the properties at very close distances.
At any greater distance beyond about 1/10 wavelength,
it all goes out the window.
That's the way I see it on January 22, 2009 at 7:55 in
the PM. :/

Could I suggest taking a look at one of the well regarded text books such as
'Antennas' by J. Kraus. Your local library may be able to get it in for
you. There you'll find it well explained that 'electromagnetic radiation',
a radio wave, has associated with it an electric field and a magnetic field.
Each is measurable and is a manifestation of the radio wave - it's probably
incorrect to say, the other way round, that the radio wave is formed by the
'radiation' E and H fields. Drawing power from a radio wave in order to

operate a radio receiver can be done using either an antenna sensitive to the local E field strength, such as a whip or many types of wire antennas, or using an antenna sensitive to the local H field strength, such as a loop - i.e. a magnetic antenna. It may be argued that either would have some effect on the other field, but this may not be very important in practice.

These radiation fields alternate in time with one another, in sync with the current in the antenna, but the phase of their alternation is (obviously) retarded with distance away from the antenna - because of the limited speed of propagation of a radio wave. They are directed transverse to the direction of propagation and are oriented perpendicularly to one another in that transverse plane.

'Induction' and 'electrostatic' reactive fields are found close to a transmitting antenna, but these decay with the square or cube of the distance and at distances greater than wavelength/2*Pi they are weaker than the radiation field.

I hope this helps a bit.

Chris

No real difference. The objective is improving the s/n ratio.
With any kind of array the main improvement is going to be
from a directive pattern and the use of nulls. Only if you had
a very close noise source might it be useful to use the properties
of the small loops, etc to reduce reception of the magnetic field.
There is a small increase in overall s/n ratio as you increase the
size of a small loop, but it's not anything earthshaking.
In the city, for all practical purposes my 16 inch round loop
has just about as good a usable s/n ratio as my larger
44 inch per side diamond loop.
You have to get into a low noise environment to really take advantage
of the small benefits of a larger loop.
IE: in the dead of the winter it will be more useful than in the
noisy
summer.
On those low frequencies, it doesn't take much to get to the
saturation point where adding "more" really doesn't do much to
improve the s/n ratio.
As mentioned before, if you are tuned to a dead frequency and
you can hear the atmospheric noise, you are already basically
to the point where adding "more" is not going to help.
At that stage only changing the pattern will improve s/n ratio.
And on MW, it's usually the nulls that are used, vs the gain
in a certain direction.

Well, that's my whole point. If the station you are listening to
is 150 miles away, I don't see how the local fields will really
come into play.

Well, this removes us from the Byzantine parsing between "separation"
and "separately."

If by the addition of these buildings you propose that characteristic
of "space" has become intrinsically different - I suppose. However,
your having made that observation, what of it?

>I'm aware of issues involved in claiming generation of separate E or H
>fields, as has been described by Kabbary et al in their 'crossed-field
>antenna', but surely the issues concerning a receiving antenna are
>different?

Ah! We return to -separate- fields as if there were some distinction
in their labels that now devolves to the discussion of the cfa. As
the cfa lacks credibility beyond having an invented nomenclature, this
does not elevate the discussion of -separate- fields to any great
distinction.

> A very short monopole attached to a high-input-impedance
>amplifier, for example (i.e. an 'active' antenna), should have very little
>effect on the local intrinsic impedance, yet it should produce a signal
>proportional to the magnitude and sign of the local E field, whatever the
>local H field strength.

However? That adverb generally proceeds from a premise and introduces
a counter argument which is not developed here.

"should have very little effect on the local intrinsic impedance?"
This drops into the dialog without any sense of proportion as it is a
qualification and the rest of this lacks quantification. How much is
the effect, how much is little, and more so, how much is very little?
Without quantifiables your impression of "little" may in fact be quite
large and fully expected.

>Equally, a small-diameter well-screened loop should
>be capable of measuring the local H-field strength without altering the
>local Zo.

Should? You write these as mandates, but using weak verbs. This is
the writing of disappointment about vague expectations. Why not use
the verb "must?" Perhaps because you would then be expected to
provide a quantified value instead.

All measurements disturb what they measure. If you cannot express the
degree, you don't have a measurement, it is a guess.

>In these cases, 'short' and 'small' are relative to the

>(separately) as active monopoles. This provided somewhat separate reception
>of the E and H fields associated with the incoming radio wave and, from what
>I've heard, it worked - it provided some degree of 'diversity gain'.
>However, this was an array requiring a sizeable amount of clear land.

This still does not provide evidence of the supposed "separate
reception of the E and H fields." The performance described is rather
more ordinary and requires no elaboration.

>Perhaps the difference is that what I described before was for use with
>broadcast signals (following the topic of the OP), in which case short and
>small antennas can be used for measurement purposes within areas provided
>with adequate (or nearly adequate) field strength, whereas in amateur radio
>applications the tendency would be to use as large an antenna as possible,
>to maximise the possible range.

Well, this last apologia doesn't even hold up under scrutiny standing
by itself, much less supporting anything that came before it.
"the tendency would be to use as large an antenna as possible,
to maximize the possible range." is another qualified statement in
that "as large as possible" spans many interpretations, and simply
stating it much more simply in terms of wavelength would peg down both
the application and the validity of the claim. Is a tenth wavelength
sufficient to obtain the maximum possible range? How about 10
wavelengths?

The difference between the performance of a tenth wavelength vertical
antenna, and the optimally sized (roughly 5/8ths wavelength) is not
dramatic. Now compare the tenth wavelength vertical to its 10
wavelength distant cousin, and drama unfolds profoundly - subverting
the expectation that larger = maximum range.

Hi Mark,

When you say rotating, do you mean about its axis along the chord of
its diameter, or rotate as in roll about its circumference?

608. A little more about the Cantenna

Newsgroup: rec.radio.amateur.antenna
Date: 2009-01-23 05:41:46 UTC
From: NoSPAM <unknown@nospam.org>
Message-ID: <uMcel.5836$tM6.5303@newsfe01.iad>
Source record: 18032

Much has been posted recently about the Heath Cantenna and the use of mineral oil to help increase its short-term power rating. While doing a search on a slightly similar subject, I ran across an interesting fact about the resistors used in the Cantenna which conveniently explained a problem I had seen with my unit.

The original non-inductive resistors used in Heath's Cantenna were made by Carborundum Corporation's Electric Products Division (which was purchased by Kanthal Globar Elektrowarme GmbH in 1993). Heath, as a company, was known for reasonably good engineering, but it was never known for using quality components. After all, the company started its electronic kit business using surplus components. My Cantenna (HN-31) was a good example.

I purchased my Cantenna kit in the late 1960's and used transformer oil provided by the local electric cooperative to fill the paint can. It was much later that I learned that the oil was contaminated with polychlorinated biphenyls. When new, the resistance was close to 50 ohms, but over several years the resistance gradually rose to approximately 100 ohms. When checked with my VSWR meter, the dummy load showed a consistent 2:1 VSWR. I thought I had "cooked" the resistor by using high power for an extended period, never thinking that the problem was inherent with the resistor itself.

It turns out that Heath had supplied a type A or AS resistor rather than the type SP which should have been used. I discovered this accidently in a search of QST articles. In the January 1989 Technical Correspondence column, there is a quote from the Carborundum catalog discussing the use of a heat transfer fluid to increase the power handling capability of these non-inductive resistors:

"Unless the resistors are protected by a coating that the fluid cannot permeate, such as an epoxy, these fluids cause the resistance of the Type AS
resistors to increase. With some silicones, this increase is as little as
10%; with some mineral oils this can be as much as 100%. Generally, the
resistance will rise as the fluid permeates the resistor body, and it will
finally stabilize..."

The Type SP resistors are already coated at the factory, and these should have been the ones Heath used. Note, however, that the epoxy coating reduces the heat transfer from the silicon carbide resistor to the oil to some extent. It also reduces the maximum voltage rating by as much as 50%.

In an earlier post, I had suggested the use of Bourns power RF flanged chip termination resistors stocked by Digi-Key (a 250 watt unit selling for $27.50). I have since learned that they also stock 800 watt units selling for $78 at the time of this writing. These are good to 1 GHz. They do contain Beryllium Oxide so be very careful when installing these. A data sheet from Bourns may be found at http://www.bourns.com/data/global/PDFs/CHF190104CBF.pdf. These devices require careful attention to heat sinking, even if they are approximately 1" x 2" in size.

What about ribbon cable? I've got a fair length of ribbon cable
(something like 25 wires - the sort used in PCs to connect hard drives
and the like) put away for a rainy-day loop antenna project. While I
could make one large loop using all 25 wires for the really low
frequencies, I'll almost certainly cut it up and make several smaller
loops with fewer wires for the higher frequencies.

Or put some taps on it,say every 2 turns? each one connected to a pole
of a large 12 position rotary switch.. then you can select a small
loop,or a really large one,for the low stuff. :-) Tuneable!

nm5k@wt.net wrote:
> I don't see how you could be receiving the magnetic
> field if say you are 150 miles away from the station.

The same (flawed) argument could be used for the
electric field. :-)

Every photon contains both an electric field and
a magnetic field. The physical particles associated
with all electric, magnetic, and electromagnetic
fields are photons. It is simplistic thinking to
try to separate these phenomena which were unified
a long time ago.

Any receiving antenna is receiving electromagnetic
waves (photons). The ratio of the electric field
to the magnetic field is constant for free space.
A wire antenna in free space responds to the electric
field and extracts power resulting in less power being
available to both electric and magnetic fields. A ferrite
rod antenna responds to the magnetic field and extracts
power resulting in less power being available to both
electric and magnetic fields. The plane wave E-field and
H-field are normal to each other and polarized by
the plane wave transmitting antenna.

The power in an EM wave is ExH and the ratio of E/H
is constant for a constant medium. If energy is
extracted from either the E-field or H-field, the
magnitude of both fields are reduced by the same
percentage.

At the California 75m mobile shootouts that I attended,
the receiving antenna was a horizontal ferrite rod. It
was relatively impervious to the effects of non-metallic
objects in its vicinity, e.g. human bodies. It was
receiving the vertically polarized ground wave at a
distance of about 10WL from the transmitting antenna.

> From W8JI web page..
> "Acceleration of charges causes a very unique force
> on other charges in the Universe. We call this effect
> electromagnetic radiation. It is a totally different effect,
> and it is independent of induction fields. This is the only
> effect or force that works to move charges at a very
> large distance, and it cannot be created by mixing

> induction fields. "

W8JI doesn't seem to realize that "induction fields" have
been unified into the field of "electromagnetism". Any
difference between an electric field, a magnetic field,
and an electromagnetic field is purely quantitative, not
qualitative as W8JI implies.

I'm not saying that a coaxial loop is a "magnetic" antenna.
I am saying that antennas do exist which respond primarily
to the magnetic field and a ferrite rod antenna is one
obvious example proven by rotating the ferrite rod in the
presence of a vertically polarized signal. Note the
polarization of a radiated plane wave is referenced to
the E-field, not the H-field.

The international 3rd edition is available at www.abebooks.com
for about $22. There's no reason for any amateur radio operator
who is serious about antennas not to have one.

One is not receiving the local fields. One is receiving
the radiated EM field consisting of photons traveling at
the speed of light. One has a choice of extracting energy
from the E-field thus creating a voltage which results in
a current or extracting energy from the H-field thus creating
a current which results in a voltage. Given the same load,
the effects of either type of extraction are the same.

Stick with a single wire and relatively few loops. More wire won't make
the loop bigger, just harder to tune.

I don't think he meant to connect all those wires in parallel.
But, it would be a little tedious to connect each wire at one end to its
neighbor at the other end (of the loop), and _not_ create an ugly bird's
nest at the 'joint'.

Hi Jonesy

For what Its Worth, I tried making a big AM reception loop using some big ribbon cable, and it didnt work. The cable was/is color coded so it was easy to connect the ends so the input to output is a series connection of the wires. The antenna didnt work. I assummed it was due to excessive 'distributed capacity' between windings. I had no interest in researching the reason for ribbon cable use for AM loop antennas. Besides, it got Very difficult to assemble the loop onto the mounting frame and have it look presentable.

I think that you underestimate my constructional abilities!
I'm not sure how many turns would be needed. 4, 5 or 6 at the most
(depending on frequency)? I'd certainly study the available information
before I started. Of course, before I started, any superfluous wires
would be stripped from the ribbon - it's just that the ribbon I've got
has a lot wires.

I really can't see any problem with cutting the ribbon, and then
re-joining it with the end of each wire being connected to its neighbour
This technique MUST have been used before by someone.

Those issues, and an acute sensitivity to them, are evidently at the root of the misunderstanding here. The oversensitivity perhaps caused confusion, irritation, defensiveness, and temporary blurry vision.

Scientists at the MIT Radiation labs during World War II found that it was a simple matter to measure E and H individually. I imagine that it is still possible to do without having to perform the miracle of 'field separation'.

Bob, VK2YQA wrote:
"What is the RX level on earth etc.?"

J.D. Kraus was a great radio astronomer. On page 403 of the 3rd. ed of "Antennas" which Cecil touts is found eqn. 5 for the Source Flux Density in watts per sq. mtr. per Hz bandwidth.
Kraus notes that:
"In radio astronomy observations, flux densities are very small, and the unit of convenience is the jansky (jy) = 10 to the minus 26 W/m squared/ Hz bandwidth, after Jansky who made the first radio astronomy observations in 1933.

I`ve worked with wide-band terrestrial microwave receivers (2 or 3 MHz bandwidth) having sensitivities of about -90 dbm, and 2-way FM radios having sensitivities of about 1/4 microvolt for a bandwidth of about 16 KHz. Both examples were about state of the art at the time.

I`d bet on Kraus anytime.

Best regards, Richard Harrison, KB5WZI

frequency----."

Not exactly. Skin depth is inversely proportional to the square root of the frequency.

For example at 1 Hz the skin depth is about 2.6 in. in copper. At 10 Hz. it is about 0.826 in. and at 100 Hz the depth is about 0.260 in. and at 1000 Hz the depth is 0.0826 in. etc.

Yes indeed. Two dircuits in separate shielded enclosures can be coupled with a coupling capacitor and only the E-field gets through. Similarly, two transformer windings separated by a Faraday shield are completely coupled magnetically and have no electrostatic coupling. I`ve worked in several broadcast stations and all towers were so coupled to avoid capacitive coupling which could give advantage to harmonic frequencies over the broadcast fundamental frequency.

Actually, skin depth is inversely proportional to the square root of frequency only in a good conductor like copper. Some common materials like dirt are fairly good conductors at low frequencies but behave more like dielectrics at higher frequencies. And skin depth doesn't change with frequency in a dielectric. For "average" ground (0.005 S/m conductivity, permittivity of 13), the transition between conductor behavior and dielectric behavior is at about 6.9 MHz, in the middle of the HF range. Well below that frequency, the skin depth changes in inverse proportion to the square root of the frequency; above it, the skin depth stays nearly constant. For "average" ground:

Freq MHz Skin Depth m
0.01 71.2
0.5 10.4
1 7.6
2 5.8
4 4.7
6.9 4.2
8 4.1
16 3.9
100 3.8

> Are either of these mechanisms probable?

From what I know about the original Acheson Process and the later Lely and Modified Lely Processes for making silicon carbide, and about subsequent sintering processes, I suspect the true mechanism is somewhere in between the two extremes that Jeff suggests, but the second mechanism is more likely. Silicon carbide and graphite are quite inert to organic solvents. It would even take something like hydrofluoric acid to attack the material at such low temperatures. Knowing exactly how the material is sintered would help with the explanation. Three main methods of sintering silicon carbide are used. One uses glass frit or metal as a bonding agent. The second uses graphite and silicon metal which is reaction bonded to the silicon carbide grains. Finally boron carbide is used as a sintering aid for very high temperature applications. Since sintering only bonds a

composite material in discrete points (as opposed to fully melting the material), an insulating liquid could diffuse between grains and increase the bulk resistance.

> Have you tried to "repair" the load resistor?

No. Once I discovered that the transformer oil I had been given was contaminated with PCB's, I disposed of the Cantenna. The PCB containing oil was burned in an EPA-rated incinerator, and the Carborundum resistor was sent to a hazardous waste landfill. I had the original HN-31, so I rinsed the metal parts with solvent that was burned with the oil. I never tried washing the resistor, and I was afraid to vaporize the trapped mineral oil because of the PCB contamination.

By this time, I had purchased a high power Bird termination load at a hamfest for $5. It had originally been used as a termination for a TACAN system and was marked accordingly with a metal plate stating that it was rated for a kilowatt in the frequency range of 900 to 1250 MHz. The seller had dropped the price in increments all day and yet hams were not interested thinking it would only work in that frequency range. I realized that this was a TEM and not a filled waveguide load and I got an exceptional deal. The seller had not bothered to read the resistance with an ohmmeter! Not wanting to pay Bird's high prices for a Type-N adapter, I made one myself.

Yes indeed. Two examples of rare species that require a controlled environment to persist.

However, neither describe how you can build an antenna that can boost its S/N ratio by virtue of ignoring one field over the other - unless Art has a 160M (AM Band much less) waveguide invention that occupies the volume of a container of Quaker Oats.

Let's for the moment squeeze our eyes real tight and imagine that it has come to pass and here comes the noise and the signal (of that eponymous S/N ratio fame). They both impinge upon this "state of the Art" design. Which field is chosen won't matter much (but I can imagine this will be argued until the design is deaf to both).

Yes, I should have used "varied" instead of "proportional" But the
essence of the posting is still correct namely, it is false to state
that the skin effect always penetrate thro out the conductor
as is the statement that a current cannot travel thru the center of a
conductor where the material is devoid of eddy currents but enclosedn
by a eddy current shield
This is not to say that with a applied AC current such a route is
chosen as I previously thought

Richard Clark, KB7QHC wrote:
"Which field is chosen won`t mstter much----."

Agreed as the fields trade the same energy back and forth on each cycle.

Narrowing bandwidth is not the only way to reduce noise. Auto radios use non-directional antennas out of convenience. A desired signal can come from any direction. But, directivity can improve signal to noise ratio as it reduces noise from unwanted directions. An example is my Telefunken receiver which features a large horizontal ferrite rod antenna. This rod is rotatable in azimuth from a control on the front panel for best reception. This radio was designed for reception in a fixed location so azimuth change is needed only when changing stations. A ferrite rod antenna can be used anywhere to improve s/n ratio through its high directivity. It requires more inconvenience to reset when the direction of the vehicle changes and it needs to be mounted outside the shielded enclosure and equipped with a direction control, i.e. a rotator.

MFJ among others sells such a ferrite rod antenna for the standard broadcast band. Aimed for best reception of KGO in San Francisco, it would discriminate against noise from most other directions.

I found my HN31 had the same symptom though, I don't know what kind of coolant was used (the unit came to me used, in the 70s, with no info). I've since refurbished it w/ a replacement resistor (Type SP) and non-PCB xfmr oil (courtesy of my local power company). That was about a year ago.

Recently, I came upon a few dozen RF Power Labs (now Anaren) RFP400-50R (400W, 50-ohm) flange-mount resistors, some good-sized heatsinks, and 120mm x120mm x 100cfm tubeaxial fans (scrapped parts from my employer). I arranged four resistors in series-parallel on two heatsinks, with the heatsink mounting surfaces face-to-face, and the fins vertical. A fan blows air upward thru the heatsink fins. I have an LM35DT centigrade temperature sensor affixed to one of the heatsinks. Feeding 1100W at 40.68MHz into the load produced a stabilized temperature of about 55&#65533;C. The resistors are rated to 100&#65533;C at 100% of rated power. Me thinks they'll be fine for Amateur use. :)

I purchased a Cantenna from Heathkit in about 1961 or 62. I remember finding a gallon of mineral oil in a drug store at a low price. (It must have been a really low price to impress me at the time.) It has been in the Cantenna ever since, and still works well. I do not use it much, but I sometimes run 100w or about 700w (depending on whether the AL-80B is being used) without problems. SWR indicated in the 1.1 or 1.2 range. It was a great investment.

If you run packet on a radio connected to a cantenna, does that make
the cantenna a bit bucket?

I had to ponder the loop for a while. Something kept
bugging me, and it was mainly wondering about the
pattern of say a small 1/10 wave loop, vs a large 1 wave
loop. Both are diamonds.
I was pretty sure I remembered them as having a
different pattern, and I decided to model them to
see.
Well. I found out that even when I'm feeding the
small diamond at the bottom corner, I'm still
getting mostly all vertical polarization.
So with the small vertical loop, I'm getting almost
all vertical polarization, no matter where it is fed.
With it fed on a side corner, which most would
consider vertically fed, I have almost the same
pattern, except it's even cleaner, with very little
horizontal.
Totally unlike the large loop which if I feed at the
bottom, it's almost all horizontally polarized.
So it seems my MW loops are still pretty
much vertically polarized, even when fed at
the bottom corner.
So anyway, as far as the small loops, I'm
not receiving cross polarized after all.
I generally don't see much difference in operation
between a ferrite loop antenna, and a wound
solenoid loop with many turns for MW.
And I did make a "PVC Tube" solenoid loop
antenna once when I was messing around
with them. But don't have it together now.
But I seem to remember it acting basically
the same as all the other versions.
IE: the directivity was off it's ends.
I'd have to make another one to compare

tilting it vertical, vs horizontal.

Yep, it's a continuous single wire. If you used ribbon cable, you
would have to put a cut, and the jumper to jump over to the next
wire on each turn.. Would be a pain.
You just take a single length of wire and thread it around
through the holes until you have the number of turns you need.
You are moving over a row of holes on each turn.
The main thing to consider is you end up building the loop
and deciding the proper number of turns around the
capacitor you have, not the other way around.
A double 365pf cap "730 pf total if jumped together" will let
you be able to tune the whole AM-BC band with most loops.
My 44 inch per side diamond loop for MW has five turns.
My 16 inch diameter circle loop for MW uses 12 turns.
Both are using basically the same cap values.
I also use a single turn coupling loop that is inside and
slightly smaller than the main loop. But it does not effect
tuning, and it's size and spacing from the main loop is fairly
uncritical. The cap is in parallel with the main loop winding.
If you use a portable with a built in loop stick antenna,
you can just couple the radio to the loop and it will
work. But all my radios require a feed line to the antenna.

Again, I'm not talking about any loop in air. I'm only one example of a ferrite rod loop antenna as exists in AM radios. Those rods are mounted horizontal within the radio while the polarization of the transmitted signal is vertical.

This was in response to the assertion that magnetic field antennas don't exist. A ferrite rod responds to the EM magnetic field whether there are any coils of wire on it or not.

I know multiple loop antennas are lossy for transmitting.
Are they adequate for receiving because of the AGC dynamic
range in the receiver?

I would not be so quick to dismiss the ribbon wire on the basis of capacitance build up ! If you start from the middle of one end by joining
the two center wires together and from then on joining the end to end wires
moving outwards what you have then done is to cancel not only the capacitance build up but also the inductance build up.
You can then unfasten the first step on the center winding and feed it from that point
i.e. center fed

Art

... but a multi-turn loop in which the self-inductance cancelled wouldn't be
much of a receiving antenna! Production of EMF from the magnetic field
caused by current flowing in the adjacent turns and production of EMF from
the magnetic field component of an incident radio wave rely on the same
principle.

I came across an old single LPDA TV antenna in the trask. It was pretty much FUBAR except for a coupe of feet of boom matrial and a few insulators. My XYL is into making models and castings and she can make a mold of the insulators easy enough. I was wondering if anyone knew of a good casting material that would be compatable with the requirements to build a single boom LPDA antenna to form the insulators. She is not usually concerned with strength or UV resistance so she couldnt help much on this part.

Conditions were outstanding for the CQWW 160 CW
contest this weekend - and for much of the
season too. I have heard several folks who
spend more time on 40 and 80 than I do say that
those bands have not enjoyed the same nice
conditions.

As an experimenter I am inclined to give things a try. If everything
can be solved by the brain while sitting on the sofa then it would be
a waste of time! As a recieving antenna all you would need is wire
that has distributed loads and ZERO lumped loads, so why not just get
rid of the lumped loads via cancellation?
The complications that you bring up, I suggest, would be applicable to
transmitting antennas only
thus I feel experimentation is required before looking for a reason to
discard.
Sometimes an innocent experiment provides a long looked for answer to
the most complicated
question

> Have you heard the event on the magnethosphere ? I have.

Few sunspots this year. http://www.hamradioresources.com/hamradio is one
possibility for a prediction site. The "Space Weather" link, second box
from the left, is relevant. See the tutorial, too.

Also, the following is quoted from "The ARRL Letter":

<quote>
For more information concerning radio propagation,
visit the ARRL Technical Information Service Propagation page
<http://www.arrl.org/tis/info/propagation.html>. To read this week's
Solar Report in its entirety, check out the W1AW Propagation Bulletin
page <http://www.arrl.org/w1aw/prop/>.
<end quote>

Don't know what "event" you heard. Details? Web link?

I don't do much 160 except for local chitchat. (I'm in SoCal.)
80 has been hopping. Quite a bit of long skip, including coast-to-coast
action and Europe from the East Coast, I hear. Running power is a big help,
more so than the higher bands, I think.
40 seems to be in the doldrums.
20 has occasional good days. I heard Alaska working Alabama today. During
most days, 800 - 1200 mile paths are common for me. Lately around sunset 20
has been going off like it's being switched off, quite different from last
summer.
I don't have a decent antenna for 15.
10 might as well be on Mars lately, although some folks claim to have
enjoyed openings. Not me, not lately.

I hope this helps.

Resonance? I think we already invented that.

I'm not sure how the AGC comes into play here..
The 16 inch antenna provides plenty enough signal,
even with no preamp used. You could turn the AGC on
or off, wouldn't really matter. No different than any
other antenna you might connect in that regard.
They are lossy for transmitting, but on the MW bands
you have so much excess signal level it's not an
issue as far as receiving. Note the ferrite bar antenna,
which is even more lossy than the open loops I use.
It has no problem providing enough signal for a
cheap portable radio.
You might be surprised just how much level you can
get from a tuned small loop on the low bands.
As an example, that 16 inch loop provides more
signal than the whip on a car. I once tried it with a
delco radio in my truck. I hooked the loop up to it,
and it was as hot as a firecracker vs the standard
whip.
The catch is the system is very high Q, and requires
constant tuning of the cap as you change frequency.

I would not be so quick to assume I dismissed ribbon wire
on the basis of capacitance buildup. Where do you read
any such thing in what I posted?
Has nothing to do with why I wouldn't use ribbon cable.
Using a ribbon cable would be a pain in the arse.
You would have to cut and jumper each turn to the
next turn. Makes more sense just to use a single
wire and thread it through the holes, row by row
if multiple turns are needed.

>
I realize that, but I guess you missed the point.
The point being, I'm not so sure it wouldn't be
responding to mostly vertical polarization no
matter how the antenna was oriented,
unless maybe it was flipped on it's side.
The rods are mounted horizontal, but are
receiving a vertical signal off the ends.
You seem to imply a difference in pattern
using a ferrite bar, vs not using one.
I'm not so sure I agree with that without
more checking.
But like I say, I'd have to rig up some test
dummies to refresh myself.
But.. as I remember from the past versions I
made, the ones I made with air cores seemed
to act exactly the same as the ones with a
ferrite bar as far as pattern. IE: both are
bi-directional off each end and both are
responding to a vertical signal.

They don't receive worth a darn off the ends.
The don't receive worth a darn in a vertical
position. They are most effective when positioned
horizontal and broadside to the transmitting
antenna. One can take an AM radio, tune it to a
fringe station and run the test for oneself.

Epoxy and polyester resins come to mind. If you are rebuilding the TV antenna and not adding significant weight, these should work well. Use the low viscosity resins sold in quarts, and not epoxy glues.

For added strength, consider adding chopped fiberglass strands. For reduced weight, glass microballoons may be added to the resins. They are extremely light with a specific gravity of 0.18 to 0.25 depending on the manufacturer. Phenolic microballoons are also available.

For ultraviolet protection, a small amount of titanium dioxide may be added (1 to 5%), but the microballoons will do a fair job alone. Painting the finished insulators with acrylic paint (Krylonï¿½) will also provide good UV resistance.

Many marine supply stores carry these resins, the chopped fiberglass, and the microballoons. Be extra careful with the polyester catalyst (typically methyl-ethyl-ketone peroxide) as it is extremely damaging to the eyes.

Good luck with your project.

Nice idea, but all of my custom VHF yagi antenna insulators were
machined from black Delrin
<http://en.wikipedia.org/wiki/Acetal_resin>
or the cheaper Nylon 66. However, they were all mobile transmitter
hunting antennas where UV protection and environmental survivability
were not an issue. They only had to be more rugged than most yagis so
that when the antenna plowed into an overhanging tree branch or road
sign, the branch or sign would break, not the antenna. Delrin should
be quite good, but rather expensive. Nylon sucks as it absorbs
moisture and falls apart in the sun. I used these simply because I
have a fairly good supply of both.

I've never tried to mold an insulator, but I can speculate on how it
might be done. In my wasted youth, I repaired my surfboard with
various toxic and noxious epoxies that I suspect are suitable. You
can purchase fiberglass matting and epoxy mix at any marine supply or
surf shop. Instructions are on the can or the internet. Machine a
suitable positive insulator, make a negative mold out of plaster, cram
it with epoxy saturated fiberglass stiffener, and pour in the
remaining epoxy mix (or something like that). If ambitious, throw in
some additional reinforcing such as rusty nails, barbed wire, scrap
metal, or broken glass rod. As long as they protrude the surface, the
presence of metal should not have much of an electrical effect. If
you want to practice without the mess, try using Bondo or other
automotive dent filler. It will be substantially more brittle but is
much easier on the nose and eyes.

You mention that your wife is into "casting". I'll assume that
doesn't mean fly casting as in fishing. However, there are a wide
variety of other forms of casting including operating a small foundry.
I've done this at home, amazingly without burning down the house:
<http://www.backyardmetalcasting.com>
I've made some unobtainable auto parts this way. Somehow, I don't

visualize your wife doing all this, but it's possible. There's also
sand casting, investment casting, plaster casting, lost wax casting,
and so on. What manner of casting does she do?

I think before I went through that hassle I would just buy some solid
fiberglass rod and make them out of that.

www.mgs4u.com as one example sells 8 foot lengths of half inch rod
for $6.00.

Jimmie,
I have tried and used these tv baluns so I could run 300-ohm cable to my antenna. BUT I only ran about 5 watts.
I used one on both ends of a 100-ft run of 300-ohm cable (so as to reduce losses) . (And I used it on 10 meters, not 2 meters)
I later wound my own impedence-matching 4-to-1 baluns to handle a full 100 watts.
You're on the right track of having fun with transmission lines, impedence matching, and antenna building - keep it up.

Jimmie,
Another 2 cents worth - you could try something like "Bondo" which is resin-based body filler. - Pick it up at Auto-Zone or other Auto parts place. But well-coated wooden blocks may work ok as well. I would try to find a way to use a PVC fitting to save money.

I was sent 10 pounds from a friend at DuPont, one of the larger
manufacturers of titanium dioxide. For small quantities, I would suggest
contacting a local paint manufacturer, or artist supply store. The pigment
is used in many ultra-bright white formulations. Note that titanium
dioxide has a high dielectric constant between 85 and 110 depending on the
ratio of rutile to anatase. So to minimize detuning effects of the
insulators, use them only at low impedance points of the antenna.

While Bondo is based on an unsaturated polyester resin, it uses lots of
styrene and filler materials. Both destroy the inherent strength of the
polymerized polyester. Stick with a high quality boating resins and use
fiberglass for strength.

Resins and plaster. Its something she learned to do in college and
once in a while she will make some dust collectors to give as gifts or
showsomeone else how to do it.

I always wanted tp try may hand at casing Al. Maybe one day when I
move out in the boonies I will get a chance. My father in law did it
but I think he got rid of all his equipment before he died.Hemade
mostly ornamental stuff and did a few demonstrations.

I think I will giveethe bondo a try. I have nearly a quart left over
from fixing a ding on the truck. I think it has some fibergass already
mixed in.

I did this with ribbon cable once and it is actually pretty easy to
do. I couldnt have taken more than 15 minutes to fabticate an 8 turn
coil.

As an experimenter I am inclined to give things a try. If everything
can be solved by the brain while sitting on the sofa then it would be
a waste of time! As a recieving antenna all you would need is wire
that has distributed loads and ZERO lumped loads, so why not just get
rid of the lumped loads via cancellation?
The complications that you bring up, I suggest, would be applicable to
transmitting antennas only

That principle is Faraday's Law which is fully reciprocal, so no, this is
equally applicable to receiving and transmitting antennas.

I hope 'EMF' isn't being misread as anything other than its original meaning
in this context, that is, electro-motive force (the non-ambiguous form of
'voltage').

I looked into some of those. And it does change
the pattern when you insert the rod into a coil.
I hadn't realized that. I was thinking the directional
properties stayed the same, with the rod only adding
extra inductance to tune a lower frequency.
I may have to try one of those to compare with
the other loops I use. I saw a few places that
sell large plastic coated rods for this purpose.

Hi Chris,
I need a bit more with respect to your response in more layman terms

When a multi turn helix is generated it can be used for both
transmitting and receiving.
When generating two helix antennas where one is contra wound and both
are connected at the top
you are saying that it will NOT be suitable for receiving !
We know by common use that the single helix is good for transmitt and
receive . So what exactly
does the addition of the contra winding do to prevent the combination
from receiving?
Looking forward to your take on the question.
Best regards
Art

Not sure as I don`t have a catalog but searched on "MFJ ferrite loop antenna" which yielded several responses including books, web sites, and a Radio Nederland 'build your own loop" instruction page, several of these mentioned MFJ 261 if my memory is correct. these responses assured me there was at least one MFJ ferrite loopstick offered before I posted. The right old radio would probably yield both variable capacitor and loopstick for a portable directional BCB antenna.

I mentioned Bondo only so that you could practice before switching to
epoxy resin and fiberglass reinforcing. Bondo is brittle and will
crack.

However, the polyester resin she is currently using might work with
the addition of some stiffener. Get some fiberglass matting and try
using her resin to mold an insulator. The stuff is not really
suitable for electrical or outdoor use, but might be worth testing
since you have some. Remember, the strength is in the fiberglass
matting or rod stiffeners, not in the resin.
<http://www.tapplastics.com/shop/product.php?pid=75>

If it doesn't work, at least you'll have the most colorful antenna
insulators in the neighborhood. Maybe imbed some LED's or neon lamps
for a Christmas tree effect.

OK. The term 'helix' is most often applied to the travelling-wave antenna invented by John Kraus, often used at VHF and above, which generates or receives a circularly-polarised wave predominantly in the direction of its axis. It is also used in 'normal-mode helix' for the type of monopole element often found on walkie talkies, that generates and receives a linearly-polarised wave. Both of these are connected to electronics at one end only.

The discussion was about loop antennas having one or more turns, with both ends of the winding connected to electronics. This construction can also be called a solenoid, but it would provoke confusion to call it a 'helix'.

When an alternating current is passed through a solenoid it generates a magnetic field, H, through its centre and around it - the transmitting case. When a solenoid is placed in an alternating magnetic field, if any lines of magnetic force pass through its winding it will generate an electro-motive force (EMF) from which current can be drawn to operate a receiver - the receiving case.

In the transmitting case the physical characteristics (described by the intrinsic impedance) of 'space' - the air surrounding the solenoid - cause an electric field, E, to be generated from the alternating magnetic field, in phase with the H field that caused it (viz. the intrinsic impedance of

space is real not complex) and together these in-phase E and H components give rise to an electromagnetic wave. A fraction of the input power will be radiated away from the solenoid in that wave, in directions where their vector cross-product ExH is not zero. The field strength of either the E or H component of the radiated wave will decay linearly with increasing distance.

You can find a good account of this process in books like 'Antennas' by the late John Kraus but it isn't possible to get very far without use of mathematics. Chapter 7 of 'Antennas for all applications' by Kraus and Marhefka, the 2002 edition, covers all this in greater detail and would be worth obtaining if you're interested.

The 'sense' (i.e. clockwise/anticlockwise with respect to some datum) of the winding of a solenoid, and the direction of the current applied, affect the polarity of the magnetic field it produces, and vice versa for the receiving case. Consequently, the phase with respect to time of the alternating H field (and the alternating E-field component of the radiated electromagnetic wave) depend on the 'sense' of the winding, but the polarisation of the radiated wave depends on the alignment of the axis of the solenoid. By convention, 'polarisation' is the angular direction of the E field in the outgoing wave, which is perpendicular to the H-field component, and both are perpendicular to the direction of propagation, so solenoid with a horizontal axis radiates a vertically-polarised (VP) radio wave - and receives best from a VP wave; the ferrite-rod-in-a-broadcast-receiver case.

Back to my original point: if part of the winding of the solenoid is wound in the opposite sense to the rest of the winding then its contribution to the generated H field, or the EMF on receiving, will oppose the contribution from the other part of the winding. If the winding has half in each 'sense', connected in series (like a non-inductive wire-wound resistor), then it will not generate an H field or develop an EMF from an incident H field, so it will not work as a transmitting or receiving antenna ... for the reasons outlined above.

Enough?

Chris

Chris
First of all thank you very much for the effort that you placed in
your response.
It really what I expected from you after reading your profile ie the
anbsence of derision.
Now I am not fully convinced with your response as the rest of the

newsgroup already suspect
Coming from a different direction with respect to mathematics, when adding a timevarying field
to a Gaussian field it equates in every way to the laws of Maxwell. Both of these laws I consider
as an absolute truth. The above therefore states that the presence of particles is undeniable in the generation of RF communication. Because of the specificity of a state of equilibrium in a Gaussian field the following can be stated. A radiator or array can be any size, shape or varied elevation
.....AS LONG AS IT IS IN A STATE OF EQUILIBRIUM
From the above ground rules which is confirmed by Maxwells laws the single winding of a wire
is NOT in equilibrium unless the lumped properties are cancelled which leaves a structure that is in equilibrium ala wire that is conductive and with no other properties other that he addition of distributed loads that are common from a conductor.
Your response is based on the generation of fields without which the radiator cannot receive by incoming waves from a transmitter, Where as my response is based on the basis of particles impinging on a receive antenna to create oscillation.
The biggest difference is the interpretation of a tank circuit(a circuit in equilibrium) where in the perfect case of zero friction your aproach would define this operation as a zero tx/rc element
My interpretation is that it cannot be zero friction even if the distributed components were friction free because of the presence of particles, which must be impelled by force to another radiator to create oscillation.
So to sum up
Your aproach is from dissipating fields to provide communication and mine is from non dissipating fields that dislodge particles as it rotates to and from the distributed loads using both as energy retainers..
As I have stated before, this is a presently a widely known method in a macro re enactment of salvage processes that sorts materials by directional magnetic field thrusts provided by eddy fields
I do need more time to study your response to see the difference between the field aproach and the particle aproach tho with my present circumstances I may not be able to determine.
Again, thankyou for your gentlemanly response, a rarity in this particular newsgroup.
Regards
Art

You're welcome.

I can't say I understand much of what you've written above but I'm sure there are often many ways to visualise the same physical process; the wave/particle duality of EM radiation being one often spoken about. For this case, I wrote from the viewpoint of the work reported in a large number of text books: the set of principles that's passed on at universities and has been used to design the vast majority of antennas that have been used since the discovery of radio. I'm not aware of any successful antenna designs, operating lower than EHF, based on a particle theory of electromagnetic radiation. However I am aware of a few unsuccessful designs (e.g. the 'crossed-field antenna') for which the creators have purported to re-write the known (wave) theory of radiation.

I know it's generally bad to generalise (!) but it seems clear to me, and probably many others, that antennas based on well-documented, well-understood, theory are always a safer bet! They certainly are in (most lines of) business where cost matters - but perhaps not in amateur circles where different motives apply.

Chris

Understood
I have an applied patent that is on the net somewhere that goes thru
these same motions to obtain an array inequilibrim whbich are then
displayed via the AO pro program whiuch confirms the
equilibrium theoryn that is obtained by the Gaussian field aproach on
Maxwells laws.
On the same patent request I provided an analysis of a verticle dipole
which for maximum gain is tipped with reference to earth. The tipping
force is the weak force or the eddy field I spoke of which is not
included in programs associated with planar forms that are based on

intercoupling coupling.
The same aproach can also be applied using the equilibrium requirement as I proposed earlier.
The only problem I can see in using MOM programs is the validity of close spaced conduntors where it is possible to conceive of interfering eddy currents not impinging upon particles, but it terms of receiving there is nothing to prevent the impact of particles on the radiator. At present my tower antenna is made of circularly wound wires in both the cw and ccw direction, again based on the equilibrium finding, where the antenna is a travelling wave form that is end fed which allows for smaller volume antennas to those presently known.
Everything revolves around the extended Gaussion theorem which equates to Maxwell's laws with the addition of particles within a boundary in equilibrium. Break that association down then all of mine falls apart.
I will place a dual wound helix on my page in the next couple of days that is produced via
the AOP Minninec program for antennas by Beasely so that you can see it for your self. It will not be completely accurate as such an arrangement requires many more point calculations than I have available to me. Will be at hospital all day tomorrow so please be patient on my page issue.
Best regards
Art

David
Your accusations doesn't bother me. After all, you got a degree by
memorising the books
without checking from first principles for yourself. Choosing from
a,b,c or d is a similar short cut for education without the
application of personal intelligence
It would be suicidal for any student to not parrot phrases and
teachings ennunciated by their professor. He is the one who reads your
work and determines whether you have earned a degree or not, thus
conformity is a requirement. When you stated that statics has no
place with respect to radiation or words to that effect it was
understandable for me as the aproach that I ventured is not covered in
any of the books presently being published. The point that all should
know is that you cannot build a castle on sand, or in other words, all
theories must rest on a sound foundation or findings and since your
degree was obtained by being a follower your reaction to that which is
not in compliance with the books of the day is perfectly
understandable
Take care
Art Unwin KB9MZ.......xg (uk)

I've never seen any white antenna insulators (except porcelain). Most
of the plastic antenna insulators I've seen are either black or
sometimes blue. I presume the filler and coloring used are something
something other than titanium white. Yet, everything made from marine
fiberglass is bright white, presumably doped with titanium white for
UV protection.

Is there any benefit to the white color over something like black
graphite stiffener and fill, which also offer UV protection? Duz the
color make any difference in preventing polymer chain breakage?

Drivel: I've noticed that the white PCV electrical tape I sometimes
use to wrap coax and connectors seems to last longer than the same
tape in black.

This is an interesting question. I have UV resistant rope that is black,
as well as UV resistant Ty-Wraps - also black in color. Wonder what the
deal is here?

Titanium dioxide is a very bright white. It reflects the ultraviolet, as
well as visible and near-infrared. I am not familiar with its absorption
spectra in the far infrared. It is extensively used in marine fiberglass
resins, both for decorative and UV protection uses. Zinc oxide is also
white and it is used in sunscreens for the same reason.

The old Hy-Gain center insulators that were blue were likely polybutylene
terephthalate which is naturally UV resistant. The black insulators
contained carbon black, a UV absorber.

> Is there any benefit to the white color over something like black
> graphite stiffener and fill, which also offer UV protection? Duz the
> color make any difference in preventing polymer chain breakage?

Carbon black is added as an absorber of ultraviolet. Graphite nanotubes
and graphite fibers are relatively recent developments. They are added to
produce a composite material which is quite strong and rigid in nature.
Being rather expensive compared to inexpensive carbon black, they are
generally added to plastics only for improved mechanical properties.

Polypropylene, Nylon, and Delrin absorb ultraviolet light and the energy
goes to breaking the polymer chain. Polybutylene and polyethylene
terephthalate absorb ultraviolet energy but fluoresce in the visible and
near infrared giving back the energy at a longer wavelength.
Polynaphthalene terephthalate is such a strong fluorescer in the visible
that it requires quenching additives in many applications such as food
packaging. Polyesters are used in marine ropes for their high strength and
UV resistance.

> Drivel: I've noticed that the white PCV electrical tape I sometimes
> use to wrap coax and connectors seems to last longer than the same
> tape in black.

I would bet that red PVC tape lasts for only a short time in sunlight. Most organic red pigments are destroyed rather quickly by ultraviolet light, a real problem for automobile paint. There is a reason for Clear Coat beyond its looks!

ok Chris
I have to get ready for an operation early tomorrow so I collected
some stuff from the past and just put it into a package for my son to
post for me. It will at least give you some stuff to look at until I
get back. The important thing to remember is all other polarizations
are always 3db down from 'max gain' and with only one circular
direction with horiz and vert. The object is to choose the
polarization required which you are aiming for to get the purest of
radiation which helps in the reflected signal when searching for
weather abnormalities at airports such as wind shear with minimum
distortion. Sorry I could not plan the offering so I have not vetted
what is posted

See....,. http://users.sdsc.edu/~unwin/

Best regards

Don't confuse the solvent methyl ethyl ketone (MEK) with the catalyst
methyl ethyl ketone peroxide (MEKP or MEK peroxide). MEK does not produce
serious health effects until high concentrations are reached. MEK
peroxide, however, is a severe skin irritant which produces serious health
effects at even low concentrations. The OSHA permissible exposure limit
for MEK peroxide is about 1500 times lower than MEK. But both materials
should be handled with care.

As a side note MEKP is a high explosive related to acetone peroxide which
was used by ill fated terrorists who intended to blow up airplanes. As a
safety measure MEKP is usually supplied diluted in a solvent which
co-polymerizes with polyester resins.

So, the difference is that titanium dioxide reflects UV, while various
black pigments absorbs UV. Ok, that makes sense. Thanks.

Yep. One of my non-clever neighbors painted their house candy apple
red. Besides being rather garrish, the paint lasted about 2 years
before fading rather badly. They had to sandblast and re-prime in
order to start over with basic beige.

Incidentally, one of my former neighors was a painting contractor. He
painted his house with the left overs from various jobs. None of the
colors matched. Not exactly an eyesore, but close.

I have some red electrical tape. I'll give it a try on the roof and
let you know after summer.

Carbon black (and various other things) are also used as UV blockers.
Obviously, carbon black may not be the best thing for an insulator.
Sometimes it works, sometimes it doesn't. You have to test it.

I sent my wife some pictures of the insulators and she says they would
have to be made in a 2 part mold and she cant do that. RATS. Ialso
found that within a mile of my apartment is a wholesale dealer that
sells a huge variety of casting materials. The info they gave me is
that someting like this would probably have to be injection molded
from melted plastic or machined from billets.

After rethinking a little if each half of an element was connected to
each other with a fiberglass rod the torsion forces on the insulator
would be reduced to zero and it would not have to be that strong.

I have found that just about any of the colored marking tapes dont
hold up well outdoors.

The low bands are best during the minimums overall.
But the MUF can drop down pretty low at times.
So 80 can stretch out, and the closer stations will
drop out on you.
It will often drop out in the middle evening to closer stations,
and then come back again around midnight or so.
Fairly normal in the winter during solar minimums.
But you will notice when the band seems kaput,
you will still hear longer distance stations, and dx.
The MUF will vary to the distance between two stations.
IE: if I'm in Houston and talking to Dallas and El Paso
at the same time, and Dallas drops out, but El Paso
is still strong, that means the MUF has dropped
below my frequency for the shorter distance, but
not yet for the longer. I'd have to drop frequency to
continue to work Dallas. IE: I'd go to 160m.

I assume you mean tapes like surveyors use as well as temporary tapes
printed with "Police Line" or "Caution." These are generally made of
polyethylene because it is so inexpensive. Exposed to ultraviolet light,
polyethylene is destroyed quickly.

To add to something "Dave" said, Dacron is DuPont's name for their brand of
poly(ethylene terephthalate) polyester fibers. Other fiber names are
Dacron, Diolen, Fortrel, Kodal, Tergal, Terylene, and Trevira. I have seen
hamfest dealers charging considerably more for Dacron rope just because of
the name. Likewise Mylar is DuPont's name for PET film, but PET films are
also known as Terphane, Hostaphan and Melinex by different manufacturers.

There you go! I check 10m every day, especially when 20 sounds quiet,
'cause maybe everybody's up on 10. Lately the only thing I hear on 10 is a
stray carrier or two. But, as you so aptly put it: It has its moments.

Hello Ian,
I have used 16 core ribbon cable, with each core connected in series for an AM broadcast band loop antenna. It was about 1 metre long in circumference which gave me a total length of 16 metres. I used a cheap tuning variable capacitor with a switch which connected another capacitor to increase the total capacitance so I could tune down to the bottom of the AM band. It is coupled through the internal ferrite antenna in the radio. On my main tuner in the house, it has connections for an antenna on the back, so I made another ribbon cable loop antenna and put a single wire with it as a pick up wire. Each end of the pick up wire is connected to the antenna inputs on the tuner. I have made four of them. They are easily made, not too fiddly and they work well. Cheers
Max

I monitor 11m for activity and switch over to 10 when I hear some dx..
I ve noticed I talk into La and Ms a lot on this longwire on 10m. I
must have lobes pointing in to each area.

Ah! Thanks for that info. It does seem to conflict with the previous
advice. I was thinking about a somewhat larger loop - maybe using 2 or
3m of ribbon, but with fewer turns - but I can't see why 'working well'
should no longer apply.

I have no preference for using ribbon - it's just that is seems like a
simple way of getting several turns 'in one go' (if you know what I
mean). Obviously, you will reduce the self capacity (and have a greater
potential tuning range) by using a loop with the turns well spaced -
although the inductance will probably be a bit less, and you'll need to
add a turn or two to compensate.

My next question is about using varicap diodes to tune the loop. Most
designs use a conventional capacitor, but a varicap would enable the
loop to be located (say) in the loft, and the tuning varied from the
shack downstairs. Is this technology worth perusing (ie Googling)? Or
has it been found to be a waste of time?

Thanks again.

Varicaps are fine and you will find devices containing pairs like the BB212, specifically intended for tuning domestic receivers. They're used in all the modern radios that are digitally controlled. The trick is to use them in balanced pairs so strong signals don't push a single diode into conduction.

Chris

Hi All,

The strong signal issue goes well beyond the possibility of
conduction. When you think about a voltage controlled capacitor, you
have to account for the effects of the voltage of the signal you are
tuning (and those you are not tuning). The BB212 application is found
characterized for signal levels less than 100mV (typically far less).

Why? A half volt signal level at the terminals of the device (taking
the BB212 for example) biased at 1V will swing the capacitance 100pF
above and below where it would be thought to be tuned. Of course,
correspondingly smaller signals have correspondingly smaller swings -
it all depends on how much you can tolerate.

This swing is also a problem for PIN diodes used as voltage variable
attenuators.

Varicap diodes will always suffer from having their capacitance
modulated by an RF signal impressed upon them. However, they do seem to
work well enough - even when the RF level is pretty high (which must be
the case especially with varicap-tuned oscillators - ie most VCOs and
PLL systems).

Presumably, the effect of this modulation will be to generate
intermodulation products. In VCOs, this will simply appear as harmonics

of the oscillator signal (which you would get anyway - even with a conventional tuning capacitor). Where multiple-frequency signals are present (like you have with the receiving loop), the most apparent effect of the modulation of the diode capacity will appear as crossmodulation and other nasties on the other signals in the passband. However, as varicaps ARE used for the tuning of the input of receiver RF stages, how do they 'get away with it'?

>This swing is also a problem for PIN diodes used as voltage variable
>attenuators.
>
My understanding of things is that the effectiveness of PIN diodes relies on them having a very poor performance at RF (especially at VHF and UHF). In attenuator circuits, they are forward biassed, and the DC current passing through them varies their RF resistance. However, the charges flowing through the junction are so 'sluggish' that they don't react to the rapidly-changing RF voltages. There is therefore negligible modulation of the RF resistance by the RF signals passing though them.

Hi Richard

I made a capacitator rotator for my 6 foot AM loop using a hobby shop
servo to rotate the air variable cap. It works quite well and the
components are affordable.
The 3 section air capacitor allowed the use of each section by switching

to the appropriate section with a TO-5 relay.

That is Brute Force to tune an AM loop, but sure makes sense and uses affordable parts.

I can see you don't know what environment you are living in. That, or
you live out in a pastoral setting and the house has no significant RF
contribution. Most of the world is urbanized and folks live within
short distances of large transmitters.

You don't put the Varicap into the high level part of the circuit.
This is obvious from the outset.

>Presumably, the effect of this modulation will be to generate
>intermodulation products. In VCOs, this will simply appear as harmonics
>of the oscillator signal (which you would get anyway - even with a

A conventional cap (and a conventional inductor, much less) will not
contribute harmonics because it is linear. Harmonics comes from
nonlinear components added by the circuit (partial conduction of an
active component that aids in the oscillation).

They don't if you are in such an environment. Again, if you don't
know your environment, then it's all a crap shoot. There is no
"getting away with it." The alternative is that the designer of a
product fully anticipated these issues and purposely chose a design
that minimized the effect of accidental contributions. Not all
designers are up to speed on the topic. The web is full of reported
failed projects that do not take bias Z and filtering into

consideration.

Poor performance when a PIN diode is first and foremost a diode for RF
and microwave applications? Only if you are using it for the wrong
reason (like using a 1N23 for 120V 60HZ power rectification).

PIN diodes are used as resistors and switches, not rectifiers.
Further, don't confuse the switch application as meaning fast turn-off
in the pico-to-subnanoseconds. Speed is relative to the application
of signal path steering where 100s of nanoseconds is more than
adequate.

Hi Jerry,

You have certain advantages over most of the correspondents here. You are something of a gear head, you know where to find things, you know how to put them together, and you actually do it.

When I was a kid, I had the same bent, but my resources were from government surplus when you needed 400Hz 26V supplies (or other such oddities). It was back in the 60s when I started experimenting with Varicaps except they were 1N23 style diodes sold for their Varicap properties (which comes free with almost any diode); the real Varicaps sold for far too much for my allowance. Wasn't much tuning ratio back then either - about 3:1 to 5:1 - today's have more range than most air caps.

In the UK, most medium wave transmitters - and certainly those which are
high power - are located well out of town. I'm 20 miles west of London,
and the nearest MW TX is about 25 miles away (20 miles north of London,
the area which it is intended to serve).

Surely it is at the high voltage part of the circuit where the tuning
capacitor will be most effective in tuning (ie most kHz per pF)?

Well, of course it won't. And neither will be an inductor (especially if
it's air-cored, as in a loop antenna).

My main personal experience with PIN diodes has been limited to their
use as 'variable resistors' in matched-impedance variable attenuators in
cable TV equipment. The essential characteristic is that there is a
chunk of ordinary (intrinsic) silicon between the P and the N layers. If
the RF signal alternates quickly enough, the electrons don't have time
to travel across the intrinsic layer before the polarity changes. As a
result, the diodes don't rectify. The higher the frequency, the better
they get at 'not rectifying'.

>PIN diodes are used as resistors and switches, not rectifiers.

See above.

>Further, don't confuse the switch application as meaning fast turn-off

While I've used ordinary diodes as RF switches, I can't remember if I
have used PIN diodes. I think that, at the RF levels involved in CATV,
an 1N4148 junction diode worked just as well or better.
>
>Consult:
>http://www.ieee.li/pdf/pin_diode_handbook.pdf

Thanks. Yes, I'll have a look, but it's how to use varicaps that I
really want to know about.

Very carefully. One of the main tricks is to severely limit the tuning range by using fixed capacitors, switched as necessary, to make up the bulk of the circuit capacitance. This reduces two serious problems, nonlinearity which causes distortion, and temperature sensitivity. Harmonic distortion can be mitigated by following the tuned circuit with filters (provided that the total tuning range is narrow enough), but this doesn't correct intermod problems caused by the nonlinearity. A third potential problem if you use varicap for wide tuning range is that the control voltage has to be heroically filtered to prevent any noise or ripple from modulating the capacitance. The problem of nonlinear tuning is often solved by using a control loop, for example an AFC to detect whether the desired signal is properly tuned and to automatically adjust if it isn't.

I remember one of my first encounters with a varicap, where I naively used it as the bulk of the circuit capacitance in a homebrew VHF-to-BCB converter. I was leaning over the prototype, trying to find a signal, but hearing only hearing blip. blip-blip-blip. blip, sounding like signals going by as if a tuning dial was being spun. Then I realized it was synchronized with my breathing. Every time I exhaled, blip-blip-blip-blip. Then when I inhaled, they'd go by a little more slowly, the other way. That temperature sensitivity, incidentally, is extremely difficult to compensate, since it's different at every reverse bias setting. The only way to have a chance is to swamp the varicap C as much as possible with fixed C, then approximately compensate the remaining temperature drift.

Hi Richard

I worked for Hoffman Labs in 1960 and had responsibility for designing and
developing a sweep frequency receiver for the US Navy. I used a varicap
to sweep the L.O.. I am not inclined to use a varicap where a lumped
capacitor will do the job.

The only advantage I can see is that it would increase the amount of
distortion for a given level of signal, since the amount of capacitance
change with signal voltage would decrease. The tradeoff would be a
reduction in the capacitance and an increase in the required tuning voltage.

Hi Jerry,

I trained with CTs (Communication Techs, otherwise those who
maintained and used Crypto or surveillance gear). When they couldn't
figure out a technical problem they always called the Cal Lab (we had
total responsibility for anything electronic).

After the capture of the USS Pueblo, it was said by my buddies that
Marine sentries were posted at the entrances to the comm room - "just
in case."

Of course, this was a lead they offered so I would ask "To protect
them from the boarders?" to which they would say "No, the Marines
would go in and shoot the CTs." This was similar to my own days
aboard the USS Holland, which, when it went out to sea was accompanied

by a submarine whose reputed orders were to sink us if we were in jeopardy of being taken over. We had a technical library full of systems plans for the Boomers.

I also served with pig-boat submariners who spoke in hushed tones about the USS Thrasher and Scorpion. Then there was my time with the CBs who had spent more time in Nam than any Marines.

There was a lot of Black Humor in those days.

Hi Spin

I cant offer any information about removing the ferrite antenna and
replacing it with an external loop. But, I can tell you that a few turns
of wire from the loop, wrapped aroung the radio, with the original ferrite
antenna connected as normal, can be made to couple the external loop to the
receiver to greatly improve reception.

Jerry;

I know how to couple an external loop to the internal ferrite antenna of the radio. I believe that i would get better nulls & gain by removing the internal antenna & directly connecting a box loop in it's place. Please correct me if i am in error.

Most of those internal ferrite antennas that I have
seen are transformers or autotransformers for
impedance matching. It would be hard to couple an
external air core transformer as efficiently as
is possible with ferrite.

I wouldnt say its imposssible but it certainly would be a royal pain
getting the tuning to track right. I have coupled big antennas to
loopstick radios just by wrapping a few turns of wire around the radio
and connecting it to an external antenna. I have also wound a few
turns around the loopstick and brought it out to a jack for this
purpose. At least one commercial SW rx I owned was built this way.

If you get the same inductances, coupling and can compensate for any difference in stray capacitance, it should work.

Ferrite antennas are used for their small size. Older tube radios used larger loop antennas.

Keep in mind there may be some DC voltages present on the ferrite antenna you may not want to take outside the radio. (In other words, while you could make the external loop work, there may be other reasons for not doing so.)

Wow, "+30 dB signal gain" from a passive tank circuit.

Hi Spin

There may be different rules for connecting external antennas depending on
if the objective is to get max gain or to get strongest null response.
An external, capacitor tuned loop is a high Q device and appreciates loose
coupling when used to receive weak signals.
If the objective of the loop is to null out a specific frequency, I
suspect the direct connection of the external loop will result in very
effective nulling.
I hope you try this antenna modification and report the results

Those with more than one coil (almost all) are not primary to
secondary relationships. One coil is the RF/Mixer stage, and the
other is the Oscillator stage and the ferrite provides the mixing path
as well as the signal pickup path. If you closely examine the
variable capacitor, you should see that it is also two independent
sections on the same frame (or inside the same enclosure). There
should also be a trimmer for each, one for peaking the RF, the other
for tracking the Oscillator. If there is a TRF stage, it will
probably have another coil/cap combo and probably with that coil as a
separate item.

It would help if you identify the "am radio."

This is why you would do just as well to add some turns to the ferrite
loopstick for an external antenna and simply shield the radio. That method
of coupling is very efficient.

I was a CT from 1962 to 1972, when I foolishly volunteered for conversion to EW (but that's another story). A few CT's were ordered to sensitive assignments aboard submarines and the rumors ran hot and heavy for that program, too. They included, "You need uniforms with other rating insignia. Nobody can see a CT coming off a submarine." and "On liberty overseas, you have an armed guard with you to shoot you if there's any chance you'll be captured."

There is no greater rumor mill than the US military. (If asked, I'm ready with a "square needle in the left nut" story.)

Going back to the physics books which takes time. Skin depth formula
is derived from the assumption that the radiator is a perfect
conductor where the depth is "finite". A non perfect conductor is some
what different.

> don't confuse him with the facts!

My facts were correct as stated. Richard stated the "exact"
proportions
which is really nit picking. Physics books say it is "proportional"
which states that it is frequency change what affects skin depth. It
is stated exactly that way in the book
that Richard has just obtained and quoted

In a weak signal area (metal building, basement, etc), any wire that runs outside can simply be wrapped a few times around the radio and grounded. The wrapping direction is dictated by the orientation of the internal loopstick. With a left-to-right loopstick, you wrap over the top and bottom

When I was in the Navy, I liked having a bedside radio, so that was my method. On one ship, I was near a door to an open deck, so I snaked a wire outside and strung about 30 feet of it behind a pipe. On another ship, I connected my wire through a cap to the telephone wire. I got a lot of click/pop noise on that one but I had a half-dozen AM stations I could hear OK.

Best reception job was on a carrier. The "weather-guessers" were high up, on the 07 level and I ran a cable to my office on the 02 level. They had their own WEFAX whip antenna feeding an antenna filter panel (AN/SRA-12, if you know what that is.) They didn't use the BCB output of the filter panel (but I did). It's good to be the Department Leading Chief.

Mikrotik parts on the radio & sw control side - no matter.

As in topic specific question, plenty of commercial antenna manufacturer over the entire world. Good point for Hyperlink Technologies, now l-com (http://www.l-com.com/home.aspx) . Worked since 2001 with them, no problems at all.

I assume that the glue of all those elements, the brain, can build what you want. Required skills are:RF environments, routing, a bit of *nix OSes knowledge, and patience....

Regards,

Warning - dilletente alert! Maybe even worth an embarrassing dolt cringe

This question may have been asked before, but is there a physical experiment that is good for verifying skin effect?

Initially, It seemed pretty straightforward, but giving some thought to the matter indicates it "ain't necessarily so".

I'm assuming that any thick conductor is going to have "skin" to any where I can put a sensor, so even if I drilled an internal sensor, the drill tunnel would form a part of the skin.

Giving that some thought, is it possible to make say a ribbed conductor that resembled a tubular heat sink, would this device allow for more current flow because of the greater amount of skin exposed compared to a solid tube?

Just a little thought experiment.

I want to put my 2M 5/8-wave mag-mount on the trunk lid, which slopes down at 20 degrees. I am concerned that most of my signal is going into the ground or outer space.

Can I bend the long whip so it stands vertically? Should I do it? does the downward slope of the ground plane leave a problem unaddressed?

Is what you are saying then that it is not truly a "skin" effect, which would have the maximum current riding near the surface, but rather some sort of effect that has that maximum current getting as far away from the center of the conductor? In other words the vertical component of the ribbing would have current flow as if it were at that distance from the surface of a solid conductor.

Not trying to change th eworld here, just trying to get my head around the issue. Lot's of things have misnomers as a name.

Not really. I mean there is probably some effect on SWR, but it is the
situation that you have. So go for it.

The velocity of propagation of Andrew HJ8-50B, 3" OD, air-dielectric Heliax® is 0.933c.

Both the inner and outer conductors of that coaxial cable are heavily corrugated, so using threaded rod instead of smooth tubing may not matter much to v.p.

What I am saying is that the ribs could prevent the flow of eddy
currents which operate as a completed circular circuit. This is how
the detection of fissures in material is found by non destructive
means. If eddy current is not present then radiation cannot occur,
thus all is not known about radiation !

Frankly I would like to know of another situation where energy flows
in the absence of a completed circuit which would provide more insight
of the circuitry of a fractional wavelength antenna, as the existing
explanation appears to be a bit to glib

lets see:
1. energy flows from a flame, but not back into it
2. electromagnetic waves carry energy but don't need a complete circuit
3. sound waves carry energy but don't make a complete circuit
4. water waves carry energy but don't make a complete circuit
5. magical diamagnetic levitating neutrinos flow out from the sun and carry energy but never go back... actually a whole bunch of charged and uncharged particles flow out from the sun in the solar wind and never go back.

Here's one, fairly simple in principle although I imagine it would require care in the implementation in order to prevent measurement error due to other effects.

[1] Construct a balanced transmission line using a pair of solid cylindrical conductors, having a known characteristic impedance.

[2] Terminate this transmission line with a dummy load - a pure resistance which matches the line's characteristic impedance.

[3] Drive this transmission line via a suitable RF signal generator or source, having a known (or carefully measured) output power into the line's impedance.

[4] Measure the RF power delivered into the line, and the RF power being dissipated by the dummy load. This could be done via an RF millivoltmeter, for instance.

[5] Calculate the amount of power being lost in the transmission line.

[6] Replace the solid cylindrical conductors in the transmission line with tubular conductors of the exact same material - hollow in the center, but with a wall width of at least 5 skin depths at the frequency you are using. Make sure that the outer diameter, and spacing of the tubular conductors matches the OD and spacing of the solid-conductor version of the line.

[7] Drive this new line, and repeat the measurements and calculate the loss in this line.

[8] Calculate the cross-sectional area of the solid conductor, and of the actual conductive portion of the hollow tubular conductor, and then the ratio between the two.

[9] Calculate the ratio between the power losses in the two types of transmission line.

[10] Compare these two ratios.

You could in principle do a similar test by making two dipoles out of solid and tubular elements, driving them with identical signals, and measuring the field strength. I suspect this test would be harder to do reliabily.

In either case, what you ought to be able to demonstrate, is that two transmission lines (one solid-conductor , the other hollow-conductor, but otherwise identical) which are long enough to exhibit substantial losses (e.g. 3 dB or 50% of the input power) would have near-identical losses, even though the amount of conductive material in the hollow-conductor line is less than 10% that of that in the solid-conductor line.

This would be good evidence that only the outer perimeter of the solid conductors was carrying a significant amount of current, since "removing the center" doesn't decrease the loss.

An experiment to verify skin effect:

Make or obtain a self-contained RF signal source. Put it into a completely sealed conductive box -- PC board material soldered together with no gaps would be fine. Then try to detect any signal outside the box. If the RF current could penetrate the conductive material, that is, if there were no skin effect, you'll be able to detect the signal.

Here's another: http://w8ji.com/skindepth.htm.

The problem with your ribbed conductor is the same general thing that causes skin effect -- currents cause fields which repel other currents. The result would be more current on the tips of the ribs and less current in the valleys.

You can make a pretty good surface current sniffer by winding a bunch of turns of wire on 1/2 of a ferrite core, and connecting it to a scope or other detector. Put the two core piece ends on the surface, so it looks like an upside down U when on a flat horizontal conductor.

5/8 Wave requires a ground, but not a ground plane. I'd get a proper
clamp, but bending will probably work OK.

I'm not really sure what you mean, but a '5/8' w/l is actually resonant
as a 3/4 w/l, and does need a ground plane to work against. On a car,
this is usually the roof or the trunk lid. Bending the antenna so that
it stands vertically will probably have negligible effect on impedance
or radiation.

But why the trunk lid? Surely the roof is better? On a vehicle, every
inch above the ground helps.

No David
Can you point to another example where a circuit flows back on itself
as proposed by this group. All of the above provides a complete
circuit because of Newtons law but none of them retrace the forward
path. I always thought that all electrical circuits are closed. As for
eddy currents how else are you going to inpart spin on a particle?
It is done this way in all metal scrap sorting yards so you need to
learn how to google so you can catch up with everybody else. Now if
they do not take advantage of levitation methods via eddy currents I
would be interested on your take of that process
without retracing a path was some sort of rule of thumb

The car is being used for 2M fox hunting. The Doppler antennas are on
the roof. The MFJ-1728B is on the trunk lid.

Are you saying that the 6 dB gain of this antenna is not high enough
for a 20 degree tilt to make a difference?

Hi Mike,

Measure the DC resistance and compare to the rather simple formula
that exists in any textbook that Art has spit on. I bet the
measurement agrees with the computation to within several percent.

Measure the AC resistance at a suitably high frequency. How much is
it a portion of the DC resistance?

Measure the AC resistance at a suitably higher frequency. How much is
it a portion of the DC resistance? Does that portion equal the bulk
conductive volume of the thread alone? If not, raise the frequency
some more until it does.

The threaded rod is rather an elaborate red-herring because you can do
the same thing with smooth wire, rod, plate, tube - choose what you
will, the volume of conductivity will be indicated by the change in
resistance.

Want to prove it is conducting only on the exterior surface?
Substitute equal diameter tube for solid rod and perform the same
three measurements above. If current cannot return back down the
inside, Resistance should climb astronomically (say by bumping the DC
frequency to 0.0001 Hz?)

Noted about the roof already being occupied.

Obviously, if the antenna is 'leaning backwards' at 20 degrees, the
radiation in the forward direction is going to point upwards more than
it would if ie was vertical and, of course, to the rear, the radiation
will point more downwards. However, even with the antenna dead vertical,
the shape of the body of the vehicle will distort the radiation pattern
considerably. I've had a quick Google, and this is one site which
provides some info:
<http://www.k6mhe.com/files/mobile_vhf_ant.pdf>
There will be lots of others.

This also might be of interest:
<http://74.125.77.132/search?q=cache:UYiK-NmAuo0J:www.dynmast.com.au/Ante
nnas/overview.html+antenna%2Bradiation%2B%225/8+wavelength%22&hl=en&ct=cl
nk&cd=25&gl=uk>

As I said, you probably won't notice much difference between vertical
and 20 degrees. But the only way to find out will be to try it.

Although the issue may be more aesthetic than functional, I inform you that I have a magnetic mount (built by Kathrein) that has a swivel at the whip connection point. So, even if the mount is slanting, you can adjust the swivel so that the whip is perfectly vertical.

A 2 Meter 5/8 Wave antenna is too long for a magnet mount.

Not if the magmount is one of those which is around 7" diameter. Also,
with the one I have, the coil at the base is something like 4 turns of
1" internal diameter spring steel so, if the whip does hit something,
there's a lot of 'twang' in the system. There's almost no way that the
magnet can be dislodged.

Just as I thought. An obvious method that quickly snuffs the growth
of grandiose patent claim enumerators.

If anyone can do it, you can't patent it - if no one can understand
it, then at least your patent can use obscure terms to get it
published as a poem.

The method in the description above claims:
1. A convector of charge particels aranged in an equilibrium of
static movement such that
2. movement of the equilibrated gaussian enclosed particels
3. has two motions not anticipated by Newton but proved by him to be
4. equil in force
5. reflecting at termination points or not
6. moving conversely in agreement with Einstein's wave theory
7. and thus was it ever

If you go to page http://www.kathrein.de/de/car/montageanl/download/936127a.pdf (the English description follows the German description) you will see the 144-MHz Kathrein antenna model K 51 17 2, which is a 5/8 wavelength magnetic-mount antenna with a swivel. The whip is 1.38 m long (about 4.6 feet) and the magnet diameter is 95mm (about 3.7 inches). The tuning coil is located inside the mount..

That antenna is very common in Europe; they sell it since more than 30 years. Please note that 57% of the German highways have no speed limit (see http://en.wikipedia.org/wiki/Speed_limit) and it is not uncommon to see the big Mercedes or BMW running at more than 120 mph).

Another 144-MHz 5/8 wavelength antenna I have has a magnet of comparable diameter.

Ken,
If you consider how much movement that there is in a whip in a mobile situation, the 20 deg will not make much difference to it, I bent mine a fraction more, and it made little difference to the VSWR or the performance.

That bites you when you use resonant loops. Of course non-resonant
loops don't have nearly the effective performance. Initial
selectivity to reduce the noise bandwidth before amplification or
mixing is why it is so common.

I think I remember from some place that tilting a vertical monopole
operating against a counterpoise increases the take off angle in both
the direction it is tilted and the direction opposite.

I welcome correction if I am in error.

Jimmie

Sorry no, they are not going to inject the LO via the loopstick. That
would lead to illegal and unacceptable emissions.

It will probably upset the grip of the magnetic mount a bit. It will
probably give you a curved radiator. Not much effect, try it if you
like.

No. You are correct. At VHF/UHF, with a vertical antenna over ground, the strongest radiation is always at an angle upwards (say 10 to 40 degrees, depending on the type of antenna). If you tilt the antenna over, the angle of radiation is therefore lower in the direction of the tilt, and higher in the opposite direction. On a vehicle, a whip with a 'sporty' rearwards rake will probably radiate somewhat better towards the back. However, I wouldn't lose too much sleep about it.

As for the increased radiation in the direction of a counterpoise (or radial), it is in that direction that the counterpoise provides a better 'mirror image' of the antenna. This augments the radiation in that direction.

Indeed. At speed, a nice, whippy stainless steel whip curves a scimitar.
Very pretty! But you'd have to be approaching Mach 1 to dislodge a 7"
limpet magmount.

Joseph, please explain (and excuse my bad manners!) - use a quote character for what?

Are you referring to my use of the pairs of single quotation marks 'xxx' in what I'd written? I usually reserve double quotation marks "qqq" for actual quotations; things that people have said ... but I suspect you're referring to something else.

... but, surely, there will be more counterpoise to the front of a whip mounted on the boot/trunk lid so this should favour low-angle radiation towards the front - shouldn't it? If true, the result of tilting the whip back could be closer to onmi-directional at low elevations!

I thought this sounded wrong, and I've certainly never encountered a
domestic receiver designed to radiate its LO! Such a design could wreak
havoc in the medium wave band (where a low-side LO would be in-band for part
of its range).

Quite possibly. Yet again, possibly not!

On my Mk3 Ford Escort hatchback, I had a 10m whip (1.5m base-loaded
DV27) mounted on the top lip (where the hinges are) in the centre. It
leaned back at about 20 degrees. I didn't notice that it was
particularly directional in any direction.

On 2m, I used to slap my 5/8 w/l on its magmount (gently, with its
rubber boot fitted) dead in the centre of the roof. When stationary, it
was (of course) vertical. But even though it would curve backwards at
speed, I wasn't aware of any obviously directionality.

I suggest that some of the people wondering about this download the free EZNEC demo program from http://eznec.com, or any other modeling program. This is just the sort of question these programs can answer. Judging by a lot of the postings here, quite a few of you will be surprised by the results and should find it educational.

I have the 'Plain Text Settings' option 'Indent the original text with >
when replying or forwarding' ticked in OE and I can't account for why it
isn't working. I guess an incomplete sequence of cascaded >>>s could make
the historical record difficult to follow. I wonder if this has happened
when I have snipped the accumulated message trail.

yes.

Look up Litz wire..

basically the same idea

However, just because it's not physically connected doesn't mean that
the magnetic field from a rib wouldn't affect the current in the
adjacent ribs (which is what's going on with the whole skin effect
thing, anyway)..

to the extent that the current is on the peaks of the threads.. in the limit it would be like a helically loaded antenna or that funky delay line coax with the spiral core? It would be complex to analyze, but gut feel is no.. the threads aren't tall and skinny enough in the run of the mill threaded rod.

That's a whole lot too complex. What about measuring the AC resistance
of 3 or 4 parallel wires arranged in a triangle or square, and then
changing the space between the wires. (As is done, say, for HV
transmission lines..) Exactly the same effect.

Thank you for that ... and I gather some get equally irritated about people sending HTML.

Chris

Hi All,

Not everyone sees in HTML either, and getting drenched by all of those superfluous mark up script tags doesn't add to the conversation.

Outlook has a horrible reputation for launching insecure processes and for spreading virus through marked up pages - no one knows the risk offered by the content of any post until they open it. I use Agent which has a safe HTML renderer, but I still don't need someone's infected posting sitting in the thread.

The addition of charts, graphs and pictures could be put to good use here. It "might" even bring sense to contrary current flow of gaussian vector particels. In that sense, HTML would be a virtue; however that isn't the convention of an already established text-based group. (And the counter graphics of contrary current flow "might" bring a blush to the easily offended.)

But if we went fully marked-up - what new vistas for rhetorical exploration would be found there! ....and it still wouldn't solve anything.

I recall medium-size table radios having a loop antenna in/on the back
cover. I don't know whether there was also a ferrite rod inside.

Hi everyone,

I would like some help with the HLP (Hybrid Log-Periodic) Antennas if possible. I know nothing about antennas, yet I have a paper to write about HLP Antennas (characteristics, calibration and so on) and I didn't find anything about them. I found only datasheets for some of the HLP antennas (mostly from TDK). Would it be a start to search about log-periodic antennas and adapt the information? What would be the difference between them?

Maybe it would sound like a stupid question to all of you, but I really don't know where to start. Can someone give me a bit of help?

Thank you.

Hi Little

You are really in luck. You say you have to write about an antenna but
dont know anything about antennas. That implies that you now get to learn
about antennas unless you are content with writing about things you "dont
hnow anything about".
Get the guy who is having you write to buy you a copy of EZNEC. You can
model whatever antenna you want to get data on.

Hybrid Log-Periodic refers to a Log-Periodic Dipole Array antenna that uses other types of elements in order to improve on some characteristic. One example would be the typical TV antennas that have a UHF Yagi with Corner Reflector using the same feed as the Log-Periodic elements. That example is a hybrid of all three classic antenna configurations. If you were speaking of the TDK models, you might have to look at one up-close to figure out what technologies were involved (I have not) but it appears that it consists of a classic Log-Periodic for VHF/UHF frequencies with additional elements for the lower frequencies, such as linear loaded dipole or Quad elements. The feed system is the key to hybrid multi-band and broadband antennas so that the element configuration for one frequency is not compromised by the inactive elements. With the TV antenna example, the LPDA and UHF Yagi are essentially invisible to each other although they use the same feed and boom.

Although this idea is attractive for frequency agile radios or for saving the cost of feedline, performance is usually better for antennas optimized for a limited range of frequencies.

It would be helpful for you to have knowledge of a variety of antenna configurations, feed systems and technologies in order to do it justice.

You can write on anything at all. You just have to determine what you want to convey.

I'm sure others will come out of the woodwork pretty soon.

First, thank you for reading it and trying to help. I appreciate that.
Well, the fact is that I would like to read something about them first
before doing any simulation. Having no background at all, I think I
wouldn't be able to use EZNEC as I should. At least a description of
these equipment, how does it work, what it is used for and so on. I
tried looking on some documentation, but I found some only on
log-periodic antennas and the theme is actually hybrid log-periodic.

Source record: 17756

I built this years ago as a quick antenna for receiving and transmitting. It is name after Havana Cuba's Arnie Coro, since He came up with it over 20 years ago.

1. Take a 45 ft/15 meter 52 ohm Coax, or multiples up or down.
2. Dress it as center conductor and braid on both ends.
3. Solder a 50 OHM resisitor on one end, connecting the center and the braid.
4. On the other end, solder a piece of coax. with braid to center conductor, center conductor to braid. On the other end, solder a PL-259, or whatever your rig accepts.. Then connect it to your receiver/transmitter.
5. You now have a balanced, low noise antenna. I would suggest a 10 watt or hgher resistor for the amount of power you are going to use if transmitting.

Did Fidel put Arnie against the wall when he published how to
construct a TRANSMITTING antenna?

He should have if for no other reason than the arbitrary instructions:

>1. Take a 45 ft/15 meter 52 ohm Coax, or multiples up or down.
What significance is 45 feet (or 15 meters)? Is this a magic number?

>2. Dress it as center conductor and braid on both ends.
Dress right, or dress left?

>3. Solder a 50 OHM resisitor on one end, connecting the center and the
>braid.
Wouldn't a 50 Ohm resistor present a SWR of 1.04:1? This isn't about
efficiency, is it?

>4. On the other end, solder a piece of coax. with braid to center
>conductor, center conductor to braid. On the other end, solder a
>PL-259, or whatever your rig accepts.. Then connect it to your
>receiver/transmitter.
Shouldn't this be 4(a) and 4(b)?

For 4(a) What happened to the resistor?

For 4(b) Why the connector? Just run the existing line out to 4(a)

>5. You now have a balanced, low noise antenna. I would suggest a 10
>watt or hgher resistor for the amount of power you are going to use if
>transmitting.

Why would you use a resistor for receiving? If it were for
transmitting, I can see why Cuba is still under domination by the
Castros.

Something must have been lost in translation - or maybe the process of
getting through the communist censors. Perhaps this was the CIA
antenna design for the Bay of Pigs.

Try googling "EMC antenna". If the antenna you are looking for is a
hybrid of a bow-tie (degenerate biconical) antenna, and a log periodic,
you'll first have to read up on the constituent antennas and then puzzle
out how they work together. Hopefully, you haven't picked a subject that
will get you in over your head.

You can look up Arnie's website on Google, go there, and read for
yourself what Arnie's idea of an antenna is. The poster is pulling a
fast one.

no no,
that is the perfect example of a dummy load with a radiating cable.

Arnie Coro's website does discuss the item described.
http://www.mail-archive.com/hard-core-dx@hard-core-dx.com/msg18595.html
He doesn't claim it works well (nor should he).

At one point he describes burying it to stealth it. When I was moving an antenna, I had both dipole elements laying on the ground but still connected. Just for laughs, I tuned it up. I could hear a few other people but nobody could hear me. I think burying an HF antenna should be followed by a shopping trip for some writing paper and stamps. You'll need 'em.

At one time, I lived in an apartment and used a similar, shorter antenna for
2 meter operation via a repeater. It was easy to build, and worked fine
because I didn't need much signal to hit the repeater.

Sure. However, I'm not recommending it for anything. As I recall it was a quarter wave of coax terminated in a 10 watt dummy load. The quarter wave was connected as previously described, with the shield of the quarter wave connected to the center conductor of the feedline and the shield of the feedline connected to the center conductor of tthe quarter wave. I was just trying to get a dummy load to radiate enough for a short path to a repeater. (Transmitter ran 10 watts)

At a different time, I simply terminated a feedline (low quality RShack RG-58) with a 10 watt carbon resistor (unshielded and 3 inch leads). It worked about the same.

However, remember that I was only trying to hit a single repeater, and a whip antenna with just a few milliwatts would have worked on that particular path. The "antenna" was very poor, but there may be paths where it is an acceptable compromise.

Think of this as a variant on taking a 1/4 wave of wire and attaching it
to the center conductor of the feedline (or, just stripping 1/4wave of
shield off the coax) with no choke, balun, or anything else. It's a sort
of sleeve dipole: The "outside" of the feedline coax essentially acts as
the other half of the dipole.

Depending on where it's installed, it might work, might not. No
decoupling means that the whole feedline potentially radiates, etc.
Probably no worse than a lot of other improvised antennas.

Put a really good choke around the coax at the 1/4 wave point, and it
starts to look better, but, having the feedline essentially hanging off
the end of the dipole means that you've got conductors in the high E
field part of the antenna, so there will be capacitive coupling.

Doing the Coro style thing with the resistor, etc, in effect makes this
another of the many "resistively loaded dipole" schemes where you give
up some efficiency in exchange for a better match. No different in

concept (although different in design) from the T2FD sorts of things
from B&W, etc.

I notice Arnie has a terminated, folded dipole or whatever you call it
on his web page. He doesn't offer it as anything other than what it is.
Most of his stuff has always been for people of limited means who still
want to enjoy amateur radio. Cubans are good at that type of thing
because their crappy economic system and the American boycott have
forced them to be that way.

Hi Wayne,

In my basement shack, using a 300mW 2M Alinco HT, I can hit my buddy's
repeater 10 miles away. The HT's antenna, fully extended, is only an
8 inch whip.

It doesn't need a resistor. It doesn't need fancy cable preparation.
It is roughly one-hundredth the size of Arnie's, operating at
one-twentieth the wavelength as Arnie's(?).

So, the amended Arnie's minimalist design:
1. Take a 45 ft/15 meter 52 ohm Coax;
2. connect center conductor and braid together on both ends;
3. throw a 50 OHM resistor over your right shoulder for luck;
4. then connect that coax through a tuner to your transceiver;
5. listen and talk to the world.

This pretty much describes my antenna that I could use to listen to
Radio Habana Cuba (and more) when I was a kid. However, I was driven
by economic necessity to be more minimalist. For instance:
1. Take a 45 ft/15 meter surplus armored 1" multi conductor cable;
2. strip out the wire from inside the cable for other projects;
3. keep the 50 OHM resistor for other projects;
4. then connect that cable shell through a tuner to my receiver;
5. listen to the world.

Using the armored shell was an extravagence, as I could have had used
one of the wires that formerly ran through it. That antenna heard
Habana, Quito, Sydney, and Cape Town (or Jo'burg) quite easily.

My radios back then were a Knight Kit Star Roamer, a BC348, a BC453,
and a RBB-1. I used the BC348 as a highly selective, second IF
(85kHz) conversion to the other sets.

More likely, it was the BC-453 you used for the selectivity although it wouldn't tune as high in frequency as the IF in the BC348. Must have used it for the Knightkit

Buried antennas were seriously investigated by the military some time ago, and are probably still in use. While terribly inefficient, some can radiate enough to be useful, and invisibility can be an asset. I was told long ago that the reason NEC-4 was prohibited for export for so long was that it could be used for designing buried and therefore invisible antennas.

Actually, I think it was the NEC 3 variant that first introduced buried wires, and was classified as Defense Critical Technology. "The only difference in the capabilities of these codes is that NEC-3 can model wires that are buried or penetrate from air into the ground, while NEC-2 is limited to antennas in free space or above a ground plane."

from Burke's NEC validation paper published at that conference in Ankara Turkey in 1989.

That paper also mentions an experimental version NEC3VLF (improving performance for electrically small antennas), NEC4X (better modeling of endcaps), NEC3I (for insulated wires), NEC-GS (ground screens), etc., all of which probably wound up in NEC4 in one way or another.

A notable export controlled application of such codes is modeling wires submerged in seawater.

The export controls still exist, by the way, for NEC4.. when you get a copy, don't you have to certify who the end user is? and agree to ITAR compliance, etc.

> etc.

The section of line at the end, terminated with the resistor, will present something like 50 ohms between its terminals (outer and inner) at the point where it is connected to the feedline, even if its terminals are reversed, so if the outside surface of its outer conductor and the outside surface of the outer conductor of the feedline present some sort of dipole to the same point, the ~50 ohms will shunt the terminal impedance of that dipole. So if the dipole actually radiates in the manner of a half-wave wire dipole its VSWR could be improved by omitting the resistor.

Working: VSWR = (1+{Rho})/(1-{Rho}) where {Rho} is the magnitude of Rho, the reflection coefficient for voltage at the dipole's drive point and Rho = (ZL-Z0)/(ZL+Z0) where ZL is the impedance of the load at the end of the feedline of characteristic impedance Z0.

~72 ohms from a half-wave dipole alone yields Rho = 0.16 for Z0 = 52 ohms, and so VSWR = 1.38.

~72 in parallel with ~50 = ~29.5 ohms for the parallel combination yields Rho = -0.28 so {Rho} = 0.28 and VSWR = 1.78.

Of course, if the 'dipole' does not radiate in the manner of a half-wave wire dipole then this may not apply (e.g. if it is buried).

Chris

852. In honor of moparhoLICK, we disclose info about KD8IMG!

Newsgroup: rec.radio.amateur.antenna
Date: 2009-02-06 00:28:43 UTC

Cross-posted to: rec.radio.cb,rec.radio.amateur.antenna,rec.radio.amateur.policy

moparhoLICK...the letter was sent because of 2 things....

1) It is the truth

2) you and KD8IMG decided that you wanted to start something....

Mr. Joseph Cousino, President
IBEW Local 8
807 Lime City Rd.
Rossford, OH 43460

Dear Mr. Cousino,

This message is sent to inform Local 8 that Robert L. Trendel, a local 8 apprentice, is currently under 2 separate 2 year anti stalking orders of protection. Since it is assumed that IBEW people work on private as well as industrial sites, it seemed you would be interested in knowing this information. It is evident that in the event of some sort of incident related to individuals encountered on a jobsite there would be considerable liability exposure for IBEW Local 8.

I am involved in this situation because Mr. Trendel victimized my girlfriend, Kathleen Lee. Kathy is one of the persons who sought and obtained an Order of Protection from the court. Owing to some personal differences with me, Mr. Trendel decided that he would get to me through her. This was admitted openly by Mr. Trendel and is in the court transcripts. He stated in court that his reasoning for various acts and attitudes toward her was that he “knew that he had nothing to lose”, referring to me, the author of this letter.

We cannot prove that Mr. Trendel is the person who smashed her vehicle window and mirror, nor can we prove that it was he who ripped her DirecTV dish off of her lower garage roof. These incidents did happen, though, and he is highly suspected. What we can prove is that Mr. Trendel called Kathy's employer and left voice mail for the HR department in an attempt to discredit and defame her with her employer. This we have a recording of, courtesy of the head of HR at her job.

It should be further noted that even though 2 of these 3 incidents cannot be proven to have been perpetrated by Mr. Trendel, all such incidents ceased after the court order was obtained.

I cannot comment very much about the second case against him except to say that Mr. Trendel admitted to conducting electronic surveillance against Donna Szymanski, his next door neighbor, with cameras and

microphones trained on her home. The exstence of a recording of Mr. Trendel saying words to the effect that he “knows everything about her, where she works, etc, and it would be simple to just shoot her” also came to light.

In another one of those situations where “can't prove it but suspect it” comes up, Ms. Szymanski's automobile tires were vandalized in her rear driveway in the time period before she requested the Order of Protection.

Personally, I would not want Mr. Trendel within a mile of any woman I know. I am sure you can see why I feel this way. I am also concerned about the prospect of somebody who thinks like this being in anyones home doing electrical work.

Page 2 of this letter shows the internet links to the court dockets of these cases. If requested the recording of Mr. Trendel calling Ms. Lee's work, and photographic evidence of vandalism incidents, etc. can be provided.

Sincerely,

Below are the links to Lucas County Common Pleas Court dockets on both of these cases.

Until a few years ago, NEC-4 could only purchased by a U.S. citizen for use within the U.S. Anyone else would have to apply for an exception via diplomatic channels.

Now, there are no restrictions except for a very few prohibited countries (e.g., North Korea). Licenses are routinely granted for users all over the world. The program is, however, still protected by copyright.

Agree.

I didn't mean to imply that a buried antenna wouldn't work at all. Dirt's
not a perfect shield material, which is what would be required for zero
radiation.

Hello,

I don't know your background and to what depth the article should go,
but I assume that you have a background in Electronic Engineering.

It is good to know some properties and design trade offs for the
normal LP antenna (this requires basic knowledge on antennas). There
are several design parameters that sets maximum and minimum frequency
range and gain.

The "Hybrid" part relates to a merge between a flat dipole and the LP.
At the low end of the useful frequency range of the HLP, the antenna
radiation pattern behaves like a dipole antenna.

Simulation is a good way to "see" the effect of various LP designs.

The second challenge for you will be the calibration (I assume gain
calibration). Calibrating for gain does not only involve antennas, but
also EM wave propagation, transmission lines and a certain attitude
towards the measuring results. Also here, simulation is a good way to
"see" the effect of (small) changes in your test setup for
calibration.

You might consider hiring an expert to set you on the right track. It
may save you lots of time.

Best regards,

Hello,

I am looking for the antenna factors table for a Eaton 94455-1 biconical antenna (20MHz to 200MHz). Does someone have a calibration table for a similar antenna around, or a manual for this antenna model ?

More exactly I have found some K factors for it but they seems wrong, except if I'm wrong with the units somewhere. I have a table with figures ranging from "47" (65MHz) up to "59" (200MHz). Assuming these figures are in dB/m this would give a gain of -44dBi at 160MHz (K = 20 log(F in MHz) - G - 29.8 isn't it ?). The result is not reasonnable... and not at all compatible with the measurements.

Are my K factor figures wrong, or is my calculation wrong somewhere ?

Thanks for your help !
Yours,
Robert

Posting-Frequency: posted monthly
URL: http://www.faqs.org/faqs/radio/personal-intro/

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been
recently revived by an active moderation team. We are currently seeking
suitable information, FAQ, and bulletin articles from the entire
rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our
newsgroup.

We are seeking a replacement maintainer for the following information
bulletin formerly posted to rec.radio.amateur.* (and currently archived
at http://www.faqs.org/faqs/radio/personal-intro/ ):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this
article updated and automatically posted again at a regular interval.
This would include establishing contact with the original maintainer for
any necessary permissions. We would prefer to seek a new, dedicated
maintainer at this time, rather than start auto-posting the original
article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to
rec-radio-info-request@panix.com.

> - what am I missing?
>
> Thanks and 73,
>
> Tad Danley, K3TD

Tad:

A 2:1 construction of a "true" 2:1 balun is possible, however, driving a 100 ohm loop from 50 ohm coax does NOT require one--meaning, a 2:1 "RF TRANSFORMER" will suit your purposes, more than adequately.

The winding to the 50 ohm source will be half the turns of the 100 ohm winding--and there is no electrical connection between windings--i.e., the 50 and 100 windings are separate on the core.

The turns will depend on the core material/power/freqs of your intended use ...

However, the focus here is that you DO NOT need a true balun here, since the loop is inherently free from any adverse influences of using a voltage balun, a rf transformer is more than adequate for your use--and will simplify your requirements. You should find adequate construction data for a "2:1 rf transformer" (separate 50/100 ohm windings) with a google search ... etc. A ferrite bar or toroid, either, should fit your purposes, as you choose ...

Regards,
JS

Obama Gets Tough to Shield Bush Torturers
http://chris-floyd.com/component/content/article/3/1694-protection-racket-obama-gets-tough-to-shield-bush-torturers.html

Who does Obama think we are as 'United' together
on pro lawless torture against innocent 'others'?
Wake up people, we are under attack by those
who refuse US Justice to win Freedom for
anyone. "Conservative" retards are completely
lost here, because they do not have the
intellectual skills necessary to understand:
a person accused of a criminal offense without
any evidence is innocent. Or, how about, No one
deserves to be tortured for confessions on
crimes left then unresolved for actual
retribution. [Aegis OPENLY murders innocent
families for more American paying for zionist
monies - P2OG - YOUR Spouse, YOUR Child, YOUR
family].

Following the crime scene leads of 911 to nab
the actual evil doers is beyond the will of the
deaf, dumb and blind? with lawlessness gaining
for monetary loses due America as corporate
cheaters. We are Brilliant, of that much I am
certain. Conservatives are minimally, idiots.

Worst Person in American Broadcast Journalism
http://www.youtube.com/watch?v=ll2YW32bqi4&feature=channel

This is like, so profound. Gibson's condemnation
is directly aimed at his own ideas of the subject
he has no grasp of. Wow. profound. See though..
this "popular" FoxsNews celeb has zero interest in
helping America succeed to defend freedom through
lawful actions, because he has no sight of a better
world blindly destroying itself. Hey Gibson! why
don't you try and be a good guy for a change! No
joke. Wow. Profound.

-

Israelis forced mother to choose which of her children would die
http://www.daily.pk/world/middle-east/9374-israelis-forced-mother-to-choose-which-of-her-c
hildren-would-die.html

/ / the soldiers told her she had to choose five of
her children to ï¿½give as a gift to Israel.ï¿½ As
she screamed in horror they repeated the demand
and told her she could choose or they would choose
for her. Then these soldiers murdered five of her
children in front of her. \ \

Funded by the American tax payers as a gift to
God as our stolen Humanity. Equal rights for all,
especially the Taliban's position in defense of
America, demanding evidence to form our guilty
verdicts.

-

Obama Accused of Blackmail over Terror Trial Evidence
http://atheonews.blogspot.com/2009/02/us-accused-of-blackmail-over-terror.html

Again, Obama is taking a position to torture innocent
people here as a traitor to Just cause. Just cause to
live in a free society. Toture warrants the death
penalty under American STANDING Law.

Video: Cop Punches Woman In Face Four Times During Arrest For Riding A
Bike
http://www.liveleak.com/view?i=99c_1233639102

Top Cop Johnny Judge rules: Ten years in prison.
Maybe fifteen if the dumfuk grunt, back from the
war against Iraqi children as a traitor to American
values, shows no remorse for his crimes against an
American women either. Absolutely any cop or soldier
who disagrees as true contempt for our freedoms with
punishment against this nazi trash pirating our
police uniform, WILL WARRANT death sentences all

around to ACTUALLY defend liberty in my America.
Any American father who prides in killing innocent
Iraqis for the escape of the neocons for 911 is no
father. And a wife should get the hell away from
a male who enjoys murdering helpless innocent others.
Children in such families should be challenged
by relatives through the Courts to save the lives
of our endangered offspring. Again, without water
or food, Iraqi children are murdered by Neoconner
grunts irrationally everyday with nothing to say,
aka, without reason but as Satanic Bush whores, to
make our God as Humanity suffer further for their
escapes as actually selling freely, lawless zionist
savagery.

KILLING MORE OF THEM - reporting war crimes to the Police
http://www.youtube.com/watch?v=gB-KaIBDNJw

Again, a bushite has no commitment to defend
America, for it speaks nothing for the arrest of
the neocon traitors. traitors like themselves whom
will murder innocent folks like your Self to steal
our common values. Wouldn't you glory in seeing
these savage grunts who on video, indiscriminately
shoot innocent families, or bomb a city entirely,
executed by Christian Patriot firing squads? or
televised to fry in the electric chair for these
documented war crimes? I sure would. It would make
our world a much safer place to raise a family
secure in knowing, bushite grunts as enemies of
everyone, were hunted to extinction for their
crimes against our Humanity. Hunted by Johnny Law,
the True Spirit of America.

Johnny Law for Coast to Coast radio Host!

yaahhh im a real person! Wow eh? Now,
let US bag some bushite scum for the Gipper.

UK judges accuse Obama Administration of suppressing torture claim
http://www.timesonline.co.uk/tol/news/uk/article5661291.ece

Yeah really. What kinda world does Obama take US
for here? Does he actually believe we hold no
interest in being attacked as ourselves, the
innocent forsaken? A reminder: an American was
executed under Iraqi law without any evidence
brought against the accused, while the grunts
were offered an excuse to seek not the culprits
at the terror scene. The case was lightly reviewed
at democracynow, a year or two ago, and can be
found by searching for a grunt pretending to be

an ambassador to Romania. A case where the Judge's
life was threatened by a "General", where if he
didn't order the death of the innocent American
citizen, the grunt with the General would murder
US all right then and there. The Innocent American
was murdered as forsaken for value shared by
free men.

-

(pet bed cat trees...)
http://www.petbed-cattree.com/cat.html

Hey! this stuff for cats and dogs looks pretty
coool. Check it out if your a pet lover!

Near Impossible to believe!

/ / "similar themes go through all our streams. And it all
comes back as Confucius says, "Do unto others, as you would
have them do unto you." And Christ said that, Hillel said
that, Buddha said that, everybody says that, cause that's all
it is. But bushite, he wants to accuse People of criminal
offenses without any evidence, and indiscriminately slaughter
everybody in countries, for no good reason but to be OUR
ENEMY, an ENEMY OF ALL PEOPLE." \ \

-

AG Holder-- First, Jail All Bush's Lawyers
http://www.consortiumnews.com/2009/020309.html

For actual documented criminal actions against
American interests in defending ourselves from
indiscriminate robberies, tortures, or mass murder.

"Judges Bribed by Private Contractor to Sentence More Kids to Juvie
Detention"
http://www.philly.com/philly/opinion/inquirer/20090128_Editorial__Judges_Sentenced.html

Christ speaks!! Echem.. This is called a criminal
action to falsely imprison American children for
more stolen money. Will the contractor be arrested,
tried, then executed in America to defend American
children? Unlikely, because it isn't as important
as how fat Oprah is today, or as Alex Jones the
bigot would say, on how daily, the hidden NWO elites
are responsible for every criminal action against
Liberty in America, not war crime dictating LIAR
Bush who told US Saddam wouldn't let the inspectors
in without corporate news correction, Bush, who
closed Police investigations on 911 for Enron, KBR,
and the Kissinger associates. And certainly not

Bremer for personally stealing tens of billions,
no no no, "just puppets" "just puppets" as instead,
the Illuminati in other words not allowed spoken
understood with Alex Jones NWOers. I want a free to
speak arena where 50 percent of what Alex spews is
truly dumber than stupid. Why? because he is controlled
through his personal weakness of bigotry, to actually
believe foolish things as factual. Examples are
truly endless when we discuss Alex Jones'
dumminess, but here is one example. Alex states
911 truthers were attacked in a TV show as NWO mind
control- but, the "truther" he referred to
talked in the drama on there being NO PLANES!
A dis-info bushite stooge if ever was one depicted
with special effects. We suffer with his bullshit
every day, knowing if we tried to phone, would
not be granted a minute because I, in support
of Freedom for America, make all bigots look truly
dumb as fascists lashing out at nothingness to
divide our masses. And apparently, he can't have
America becoming greater for defending ourselves
fairly through Judicial actions.

-

which side are YOU on? by REBEL DIAZ
http://www.youtube.com/watch?v=8Dr05tXktSo&e

The side where a person accused of a criminal
offense without evidence is innocent, and in the
case of capital accusation, the false accuser
deserves severe punishment as an enemy to my
Humanity.

U.S. partner, not Hamas, firing rockets into Israel
http://www.palestinianmothers.com/profiles/blogs/us-partner-not-hamas-firing

/ / The probe found the Islamic Jihad rockets were
actually fired by Fatah. \ \ Whom Israel in response
to the confessed by all to be true facts, murdered
innocent Christian children in Gaza as war criminals.
Actually claimed it was regardless who shot the tin
can rocket that struck no one harmlessly. Again,
Nazi Israeli responded by murdering innocent Christian
children as war criminals with "disproportionate"
force. War criminals who murder Humanity to steal
our shared values.

-

Dennis Kucinich "Israel is Killing Children With Your American Tax
Dollars"
http://www.youtube.com/watch?v=HrtPpk6nhF8&feature=related

Israeli openly admitted that they targeted those
innocent Christian children for MURDER - as -
continuing "disproportionate" force in our names
as enemies of God and Humanity. They are not Jews,
but of the evilest group of lawless nazi savages
pirating the government of Israel away from US Jews.
I demand open debate in America, and Americans refuse
me by not likewise demanding international coverage
on the Coast to Coast radio networks. Let's change
this by communicating.

Ceasefires, Israeli-Style
http://sjlendman.blogspot.com/2009/02/ceasefires-israeli-style.html

They admit TODAY, as yesterday, and last week, month,
year, decades, that they target completely innocent
people for murder to punish Humanity for believing
in God as Just, or real freedom understood as practiced.
Libertarian couldn't give a shit on a issue such as this,
that they keep everyone ignorant of through hypnosis. Israeli
openly admit to thieving innocent peoples homes, to them
be sent at gun point, to live in a concentration prison
death camp.

http://www.davidduke.com/

/ / ..the Israel Prime Ministerï¿½s speech in which he
actually boasted of his power to order the U.S. President
as one would a dog. \ \ and all American men can't for
some god forsaken reasons, can't for their lives, phone
George Norry to be hung down on. George Noory is a "good
guy" for aiming to go ballistic against every American
who refuses criminal orders to destroy themselves.

Obama set to allow Bush-era ï¿½torture flightsï¿½
http://timesofindia.indiatimes.com/Obama_set_to_allow_Bush-era_torture_flights/articleshow/4067338.cm

What the fuk eh? Doesn't Obama know this
crime warrants death in America according
to the war crime act? Does he believe America
just will never have a chance to speak for the
interests of US as innocent Human beings he is
planning to torture as an enemy to Life?

Refusing to Defend American Values

Yoo: Bush okayed torture to outwit defense lawyers

This is why it warrants the Death sentence. Remember
corporatist Amerikan citizen, these torture victims
that include children as younger than a hundred, had
not been alleged to have ever committed a crime in
their entire lives. Victims tortured to death for the
pleasures of those Satanic, such as General Geoffry
Miller, who tell US today as confidenced, they do it
because, patsy wasted American soldiers will just refuse
to hunt them down for formal executions. Let's change
this for our Humanity in this future, to look back,
and know, American males were men of the World, who
stood for the principles enshrined within every living
Constitution. A free man shall not be jailed, or
tortured by anyone in our names as Governed, without
the perpetrator tried publicly for execution as our
Love of real Justice. As first degree mass murderers
warranted death sentences under the War Crime Act
ushered by Reagan!, all done in for our protections
of their next innocent victim - ourselves. Or
die a death in corporate tyranny worthy the title,
cowardly traitors to God and Liberty. Blackwater,
CACI, AEGIS, KBR and the like will all be hunted to
extinction for refusing to quit their lawless Rape
and mass murder, murders done for more stolen money
as America's name high-jacked. The Lawless enemies
shall be prosecuted by the honorable Soldiers of
the Good old, Red White, and Blue. Count me at
our words on this, I am,

King Johnny

Ungodly Israeli Nazi LIARS Continue to Murder Children after "Truce"
http://www.youtube.com/watch?v=-HQO0774lx4&feature=PlayList&p=4199C9262539936D&index=0&playnext=1

A truce means nothing to Hamas?, who states
much of no complaints as in support of Israeli
Nazi lies, why? Have you seen where a blimp is
traveling about five miles an hour, fire bombing
thousands, and none have even a pullet gun, never
mind an Iranian rocket launcher to shoot the Satanic
demons down for God as Love? Why doesn't Hamas
at least admit, like an Israeli General has,
to be funded by Zionists for cash gains paid for
by Zionist Amerika? Why? Why is it that Hamas
suffered near no loses, but all the Cops who
voted who knows, died murder victims trying to
defend our family from Texan child rapists?
Along with thousands of others targeted as
innocent Peoples? Targeted. Why? Nazi Israeli
broke the truce!! THINKTHINKTHINK Demand coverage!
Hamas certainly isn't. ..maybe because they're
illiterates on the Cause of God's Will being
Just?

Bushwhoring Enemies of the American Police

What a demon enemy of life these bushwhore enemies
of American Liberty are eh? No concern whatsoever,
for all the teen soldiers conned to die for those
who committed 911 in NYC. The millions of bombing
victims, the tortures, the rapes of American women,
STILL, TO THIS DAY, left undefended by "the law".
Evil enemy of everyone these demon fuks are. How
difficult is it, to understand the facts they feign
complete blindness on? They WANT to con you as the
coward to life they are, willing to kill America to
make their antiChrist lawless enemy Mr. Bush happy.

From years after the fact still demanding Justice now:
http://groups.google.co.uk/group/alt.military.uk/browse_frm/thread/ca0e34fb32caeb0a?hl=en&scoring=d&

Huh? "at last been disarmed..." ? How does he figure? The equation hasn't changed. Example: The same unaccounted anthrax, (that was disintegrated into ash), still is not able to be measured as completely accounted for, (never could be), but this bushwhoring war crime apologist, tells US, it was only though the lawless murder of our good friends and family for countless generations, that he now attests without reason, or evidence, to find Iraq in "fact" disarmed of it's still nowhere to be found, weapons of mass destruction. (An irrational reason he pronounced previous in corporately broacasted public support of instigating heinous war crimes against our humanity under the leadership skills of the evil lying demon antiChrist, our Mr. bush Jr..)

Ron Paul defeats 5 TV 'experts' in 10 minutes
http://www.youtube.com/watch?v=0k92fTDReHg&e

Ron Paul is a traitor. They stole the cash Ron. And, the Iraq war is a war crime. But Ron, the Fascist, doesn't want THESE FACTS uttered. Why? Because wiser men would prevail, wiser men like me who understand buying in bulk is cheaper. Those like Christ who understand, who KNOW, the banker doesn't cover our loans - so why give them as much as a taxed red penny?, let alone trillions as officially unaccounted for? They are stealing the cash Ron. Ask yourself: Why has Alex Jones forbidden his bushwhore cult from understanding Bush doctored the NIE?, or of iron flowing like water from the towers? Because wiser men would prevail and he can't have that. He called shooting innocent men in the back, an act of liberty. I, an actual god, unlike Alex, lie near never, but maybe to myself when I'm lonely. Alex yes will tell you rapists are free to do what they will in Texas to American children, un-arrested, but he won't mention it when the police chief is with him on air, talking about how he'd like to be exempt from traffic tickets for being so popular. NO MENTION of the rapists walking away without arrests made, no mention of Bush's documented treasons on 911. Where are Alex's priorities? In selling YOU out so he can be wealthy like a bankster?, and have special rights over everyone else that drives drunk, or speeds? a big hero standing over our dead soldiers yelling, I told you so, I told you so, I was right, I was right.

Again, understand: It is not by my will to deny
open debate with America, it is Alex, and his
demon buddy George Noory that denies out Humanity
this right. And when people try, like Peggy, or
Black men on Jewry, Alex lies cheats and steals
our wills for further thefts. Ron Paul's family has
millions taken from loyal Alex Jones fans. MILLIONS!
Does Ron do commercials with that money highlighting
the bushmob's plan to invade Afghanistan, dated two
days prior to 911 for Enron? Of course not, wiser men
would prevail to expose him as the charlatan charity
raider he is regarding Health Care, Social Security,
Public Schooling, earmarks.. It is unfair to measure
Ron against corporate nazi zionist whores of MSNBC who
willing, openly, kill American teen soldiers for
criminal neocon gains, as an honorable gentleman's
talk. Half honest People like Ron are extremely ignorant
on the workings of our world. EXTREMELY. I joke here not.
Evil is the deceived disguised - translated - evil
people are always dumb.

Corporate America says no, Charlie Manson was a genius,
but not, that most Americans are prone too easily to
suggestive states where they can be made to believe
anything blindly. Think: what does, "bin Laden did 911"
mean anyway? You should know of what I'm trying
to teach you here. That is how
Alex knowingly or otherwise, steals our rights, by
beating off he knows everything already. And some,
if not most, actually believe him without knowing
squat either. It's sooo easy that way - no study
required!! LIBERTARIAN HELL! Everything is not on
the Internet, where it near should be, but regardless,
a Libertarian can't be bothered to read anyway.
"Free Talk Live" is the best example for this: the
two hosts are unbelievably ignorant on just about
every single subject under the sun, but beat
CONSTANTLY, on how greatly wise they are as drop-outs.
You wouldn't believe any of them when they speak on
Freedom, if you simply understood, an innocent man
does not deserve to be in OUR prisons, or tortured.
Under any circumstances that Obama has excepted for
our excuses. Magna Charta. But in Alex's 'genius' mind,
he doesn't need to actually understand he is a for
sure bigot, (measures another unfairly in a group HE
concocts from blind hate or personal fear - typical
CONSERVATIVE and/or racist) who has no problems with
that at home, or at work. Provable in seconds by
OPEN DEBATE, but Alex ain't gonna take our calls
because, he can't for the lives of every People

person thought of here, admit he could have
something to learn, therefore, the NWO is
unstoppable in his brain washed cult of indifference
to Justice practiced for the benefit of all treated
fairly. Why? He's not wise enough to respect the great
minds of the audience, and I personally believe,
he doesn't even have the good judgment to own
a gun. (I mean, why wouldn't Alex find my stories
of OUR Justice system triumphing by my single hand at least
minimally beneficial to his blind cult followings? to not
hang up on me immediately while spewing lie after lie
on how I'm top secretly a dis-info NWO artist working
for Bush? or whose voice sounds too friendly to trust?
like he has done the last four times I've phoned -
Hey! I can be an asshole if you want - no prob.)
Perhaps it's near because, Alex Jones is blind, and
as such, could actually be found guilty in Texas for
murdering those two innocent black men shot
in the back with his approval to release the murderer
from a RIGHTFUL death sentence prosecution. "law of
Parties". He is a party to the crime, for he worked to
support the release of the FOR SURE, FIRST DEGREE MURDERER.
Sound like an America you could live with? I didn't
think so either. I wanna be Alex's Attorney. Texas is
a State of massive lawless corruption, as dire
incompetence in legal affairs where they OFFICIALLY
plan executions against innocent People not established
to have harboured criminal intent! With Jury Trials!!!!
!!!!!!!!!!!!FINING THEMSELVES GUILTY!!!!!!!!!!!!
While Alex does express murderous criminal intent,
and the Police chief calls him a good man for no
scary pressures. What the fuck is wrong in Texas
where they mess themselves like this regularly?
Imagine, while Bush with the Neocons escape, and
Zionist Israeli target to murder Christian School
girls OFFICIALLY, Alex doesn't want to have to pay
traffic tickets like the rest of US. What a douche bag
to tell he LEADS our Truth movement I say. Now, I'm
not saying he shouldn't contribute with the truths
WE SHARE, far from it, it's just he can't have our
cut off switch to silence our objections to his exposed
foolishness, and/or blatant criminality. I'll give him
a chance, for starters, to criticize any position I take
while we all publically call on ourselves for
assistance internationally. Like on his "buddy",
George Noory, deserving to be tried Publicly for the
traitor he is, and be formally executed after his day
in Court. Our Courts. Teen soldiers have been conned
to die by George Noory for the escape of the neocon
terrorists who committed 911 with Condi, Runsfeld,

Bush, Myers, Tommy Franks, and General Ahmad. AND
HAPPY GEORGE NOORY KNOWS IT - and cons with lies
naked to the ear of any who can listen or hit record.
A NAKED traitor to the cause of Liberty if we ever knew
one regarding the War Crime facts of Iraq. .And
Ian Punnet is an evil godless enemy Bush whore who
lies too to get YOU killed as the innocent soldier
forsaken so don't forget.. It's YOUR life. It's God's
Gift. Now support our rise for popular international
debates to get these Neoconners behind bars
awaiting Public Trials! "Public"thatsoyu!! Get to
the Phone to call someone to care man.. Johnny
Jesus has arrived! Justice Will Be Done in this,
Our Kingdom to Come.

Justice to the war criminals of
indiscriminate warfare would better serve ourselves
to halt for our safety. The bushmob did 911.

1. The ISI's General, Mahmoud Ahmad funded 911's Atta

2. We have video of iron flowing like water from the towers

Humanity Under Attack by the Zionist Enemy of Life

GAZA APPEAL THE BBC & SKY REFUSED TO SHOW
http://www.youtube.com/watch?v=c9kwpxlZorI

Not only that but the BBC argued that to show
innocent Human Beings suffering, in CRITICAL
life threatening need of desperate food and
water that Israeli nazi stole, (because they are
unlawful murderous thieves), would have them look
like they were partial to serving Humanity's
interest in compassion for US humans. Over the
Israeli terror Nazi tactics of indiscriminate
slaughter for more Amerikan welfare. Wicked evil
nazi bastards who too, DO NOT THINK IT BEST to
report Peter Powers committed the London bombing.,
Oh yeah, and mercury is neural toxic, anti-psychotics
make us crazy, and sodium fluoride makes us
stoopider while weakening your body for big cash
surgeries - ultimately leading to a profitable

death for dah' winnahs.. So, they, the BBC-NWOers
just needed to avoid the bath or shower,
humidity, Pepsi's purified bottled water product
lines, koolaids, swimming pools, Jacuzzi, Hot Tub,
Sauna, private Whirl Pools, and.. blh blh blh

/ / the FBI says no.. There is not a thread of
fact a zionist offers to form YOUR own mind in
respect for your rights being equal to ours. \ \

Who is the guy who keeps writing such things,, and
shouldn't he be recognized as Promotional to raise
all spirits towards a better future? I'm with him.

The U.S. Is Required To Bring George W Bush & Donald Rumsfeld Before A
Court! U.N. War Crimes
http://www.youtube.com/watch?v=BRAlqkPbjP0

Olbermann | Bush Years: 8 in 8 Minutes
http://www.truthout.org/011809Z

Bush and Cheney are traitors to the cause of
American Liberty. To leave them free, is to leave
America un-guarded from further transgression.

The bushmob doctored
the NIE. Conned Congress, and Soldiers. Did 911,
by closing criminal FBI investigations immediately.
Alex and George don't seem to want US to know
these FACTS that demand arrests of the culprits
responsible for high treason against Johnny's
America. Alex wants your money, and EVIL George,
our enemy, wants your soul stolen for Satan.

Turley: Obama 'accessory' to war crimes if no prosecution
http://rawstory.com/news/2008/Turley_Obama_accessory_to_war_crimes_0127.html

Understand, Alex Jones doesn't want Justice
for Americans because he loses out to better
men that usher a greater life. He doesn't want
the evidence of George W. Bush made public to
defend American teen soldier's lives. The true
fascist Alex Jones, who in silence supports the
escape of Bush for treason, will fail our true
voice for Justice in our times. WE DO NOT rule
the truth we share equally committed to defend
ourselves from lawlessness. And you'll never
rule my right to speak freely over your intent
to sell us all out for monetary swindles, just
like Ron Paul did. Understand: Ron Paul doesn't
even acknowledge 911 was an inside job, or, that
Bush gave zero evidence to form Your opinion.

Alex Jones, the Slave, told US today that
he challenged Bush for eight years - Bushite
lying nazi traitor. Not only that, but he
also ridiculed those who wish to blame Bush
now for anything! Again, he doesn't want
Justice where bad guys can't steal from
ourselves unrepresented. Ron Paul is a
multi-millioniare, made rich by charitable
aid conned from Alex Jones' NWOers! Alex
Jones doesn't have a problem with that, we
do.

Israel to be Judged - Universal Petition
http://www.tlaxcala.es/reponse_signataires.asp?lg=en&ref_campagne=10&Page=1

The demon LIAR zionist Israeli is a godless enemy
of Humanity, much like everyone at Foxnews, CNN,
BBC, and the CBC. Our revolution against the godless
bushite shills, will not allow our revolution
through speaking honestly, (to become of ourselves
something greater), a chance to be televised for
our benefits. Bush closed criminal investigations
immediately after 911. According to the FBI and
Senator Dashle. CNN says you have no power, Foxnews
says you have no power, the BBC says you have no
power, the CBC, the same, like Alex Jones NWOers...
but well, don't believe it. YOU Do have the Power.

http://www.iran-daily.com/1387/3324/html/east.htm#s359247

/ / International attorneys have filed war crime
charges against 15 Israeli political and military
officials including Ehud Olmert, Tzipi Livni and
Ehud Barak. \ \

-

We must demand open communications to bring back
values WE ALL would agree to through polite debate.
"Conservatives" don't want this Freedom idea
expressed in general terms because, a "conservative"
is universally, minimally. a bigot. Why? Life isn't
like, their way, - then- all other opinion under
the sun on how things actually get done. (Aka
"socialist" traffic light repair men, or "liberals"
who want to treat The People fairly). Or who we are
as equals to our laws fairly practiced. Pay attention
to what I am saying here. Liberals can be Dicks with

a capital D too of course. But a Hannity couldn't survive 2 minutes with me speaking on his very real treasonous behavior in OUR public arenas. Behavior done to escape the 911 culprits from the long arm of the Law, with his conscious will of criminal deceit exposed, we all learn to better defend ourselves. And Shawn Hannity can't have that for ourselves, he takes too much money from ourselves as talentless by keeping US in the dark dying needlessly for traitors never elected publicly.

Who am I you ask? Johnny Law. at your service. Look me up with usenet to discover, we live in a world of idiots everywhere pretending to be somebody by lying. While I want US all to truly improve our condition by actually understanding how bad off we are by failing to respect ourselves for correction. Too many, know it alls, with not enough to know you need evidence to form a guilty verdict against an accused man or woman. Not according to CNN, CBC, MSNBC, Foxnews and the like however. Let's change this by supporting my challenge for top billing at the Coast to Coast radio show hosting. Look for me coming soon!!

-

Unseen Gaza High Quality: Part 1 of 6
http://www.youtube.com/watch?v=UeezoWRu1FU&eurl=http://whatreallyhappened.com/

Why is it that numerous visits don't change the view count? What is this business of a=a+1, the top secret, I'll go rhythm, that is way beyond our comprehension in it's scientific complexity? For Americans, okay, but the Human species just isn't this dumb.

While Zionists OFFICIALLY target Christian school girls for mass murder, CNN instead reports that bushite grunts attacked girls in Afghanistan, posing as Taliban. I WILL every celeb at CNN to be arrested, tried and executed for the reporting they have done today without facts. Remember: the Taliban played no part on escaping those responsible for 911, and opened schools for girls, and were brought together on the single purpose to defend women. Death to CNN reporters to LIE for killing OUR school girls. I HATE zionist enemies of Humanity and God I am.

The Torture Ban that Doesn't Ban Torture
http://atheonews.blogspot.com/2009/01/torture-ban-that-doesnt-ban-torture.html

/ / Obama's Executive Order bans some -- not all -- US
officials from torturing but it does not ban any
of them, himself included, from sponsoring torture
overseas. \ \

Is America a nation of Law to Live freedom?
Because this SPECIFIC deviant action of Obama warrants
the death sentence under Reagan's "War Crimes Act".
SPECIFICALLY. Or, is it you falsely believe Obama
can do no wrong against innocent people here, where
an illiterate nazi grunt, maybe from South Africa,
will kidnap YOUR children, and torture them to
death for sadistic pleasure, with as they did using
power tools caught in Iraq, according to Iraqi
government official(s), and several soldiers from
Oregon, all because Obama has given an ILLEGAL!
"excuse" to NOT support following the crime scene
leads at our REAL murder scenes? Again, death to the
bushite dumfuk enemy of God, death to the enemies
of a freeing Humanity striving for a just society.
Obama needs to be arrested for this under the Law
as it stands I'm sorry to say my friends. Why?
Torture is illegal in all 50 states, (as Reagan
directly planned), no matter where you ship the
innocent victim to, or from! Read the War Crimes
Act, then demand Justice today, otherwise, it's
YOUR funeral. Obama wants to secretly torture
Peoples here, while lying to US ALL that he doesn't!
A TRAITOR! Who also wants to give bankers 100s of
billions of dollars more to disappear, that WE pay
for, out our door, never to be seen as our own
again.

Jack Blood interviews Richard Andrew Grove, an AIG insider and
whistleblower
http://video.google.com/videoplay?docid=6546044203900048624

Alive We Say

And Alex Jones gives us the same guy twice
a week that blames the Illuminati, while
encouraging that YOU TOO! can get money
for nothing like the banksters. Just give
the Alex Jones', NWOers, the "truthers" money
money money money. No time for affording the
explanation that the TREASONOUS bushmob

doctored the NIE. That Saddam wasn't in violation of 1441. That a NEOCON is identifiable for it's demonic LIES against God and Man. Never to tell, the private bankers don't cover OUR loans, that Bush PERSONALLY worked to close Police investigations immediately after 911 (obstruction), or that WE have video of iron flowing like water that PROVES, without doubt, bin Laden couldn't have single handedly placed the explosives in the buildings, or stole the black boxes. Because someone surely would have spotted him dragging his dialysis machine what with all the professionalism of corporate news media coverage regarding our horribly suffering worlds. Alex Jones ignores the treasons of Bush, as a Bushwhore, and instead, tells US of how Obama is Bush on steroids. He only wishes. What about Justice for Americans Alex? Why for do you forsake ourselves? For money? What about the lives lost to mass murder, that you allege to champion OUR TRUTH without saying much of anything on real Freedom?, on real Justice like your deviant election rigger, Ron Paul? Well, no wonder, Alex told US he's into shooting innocent American People in the back as a tyrant of evil, a white Devil if you will. Kids too if you dare look in his back yard for a copper. See? Now if Alex doesn't allow US to speak, more and more will understand to know why. I am a defender of all that is right and just in this world, because I don't need to lie like Alex does on a huge host of issues. I'm more like Jessie Ventura, in where I don't need/want to lie. If I end looking foolish, (of which I like never truly am), it's a benefit, because that way, I've learned something. Alex knows everything already, and 'is always right'. Like I say Retarded. You weren't right by not understanding that the banker doesn't cover the loan. One example of easily hundreds. He's a typical, he knows it all, know nothing dumduk American. Hear him on health care speak as Ron Paul does, and know, I defeat them in under ten seconds. TEN SECONDS. This is why he hasn't in years, allowed me to speak more than five or six words. He's rather all America die, than

admit he does NOT rule our 'Ocean of Truth'.
I want the challenge of opposition through debate
to PROVE my skills beyond reproach. Alex,
every time, just hangs up on anyone who tries
to improve our communications by factually
speaking. Why? Because he IS TRULY deeply
ignorant on what freedom or Justice means. Why
we have law. What a consensus is. Allan Watt is
severely disabled in this regard, another Alex
Jones favorite. And this is why, Allan can't
take calls openly either. He has jerked off
with himself too long to quit now learning
super basic precepts, for like Alex, he "knows"
the inner workings of the 'genius' NWO elites.
Not Law 101, not Bush, not Rumsfeld, Not Condi,
not Torturers, not bank robbers, rapists, or
even petty thieves. Allan Watt isn't a bad guy,
he's just a chauvinist pretending he actually
knows something, when his real disability is
directly related to his absence in understanding
understandings. Doubt is a near foreign concept.
A challenge for Allan: can you get your 'genius
mind' around the fact that Peter Powers did the
London bombings, and not the Illuminati of 1463?
and if not, why are we so dumb to our present
plight that way? Don't get me wrong, Allen has
much to offer, it just isn't the issue right
now on saving our dying futures. Maybe I was
too hard on Allen, he is really actually kinda
cool. Alex Jones too has many incredible
moments of ecstatic clarity increasing in all
they joy of seeking enlightenment. .. Ok -
but this is serious business that requires
little dilly dally with what we'll have as
a side dish in Paradise Lost. We are talking
Human Lives have been destroyed by our inaction
to remedy these failures to communicate
effectively. and.. Jeeze, the weight of my
responsibilities, as just plain John, being
a/the Legos Man - for like the Family and
everythings, get's me never forgetting, all
we got are these words left dormant from the
power they truly possess in the minds of the
wise asses. And.. here I am. I'm a Talker of
Words looking to make a break in the
NewZbiZ. Zzzz... Alive We Say! Alive!

King Johnny, from Earth, has come for talks.

-

The Zionist enemy, the most evil nazi sons-of-bitches
who openly advocate tyranny and oppression through mass
murder of ourselves as the innocent left targeted
defenseless. Enemies of Jews everywhere, the Zionist
cares not for facts on who's Life it destroys for stolen
gain by lying. That's why they target Jews, for fear the
Light of Truth would expose them as the Nazis they are.

Hamas doesn't have a military though, so,
why not demand the arrests of those who
broke the truce, and murdered innocent people
indiscriminately, on plans more Jews would
die for cash profit? Profit paid for by
zionist amerika? - the false imprisoning
torture and rape center for Neocon
Freedom.

The self-defence defence
http://www.guardian.co.uk/commentisfree/2009/jan/23/israelandthepalestinians-gaza

/ / This has been a central theme of the war in
Gaza: not that hundreds of innocent people were
killed, not that over 5,000 were horribly injured
and not the sky-high human and monetary cost of
wrecking homes or razing infrastructure. \ \

Court petitioned to arrest Livni upon arrival in Brussels
http://nawaat.org/portail/2009/01/23/belgian-court-petitioned-to-arrest-livni-upon-arrival
-in-brussels/

"We believe there were dozens of IRGC
personnel in the Gaza Strip during the
war," an Israeli source said. "Some were
killed; others went into hiding, and
others escaped."

See? the demon enemy of God speaks no
evidence as a TRAITOR to every Jew. A terrorist
nation that still steals humanitarian aid in
our public realm of left defenselessness. The
false allegation deserves a death sentence
by Jews against the war monger Zionist enemy.
A cause that Iran should champion, if in fact!,
this allegation by OFFICIAL WAR CRIMINALS WHO
TARGET FOR MURDER OUR SCHOOL GIRLS, is on it's
face, unsubstantiated as patently, demonically
false. As typical from any godless Zionist.

Where are the Americans asking for the
formal arrest of Bush for high treason?
Whoring for Alex Jones's contempt for REAL
Justice? The ignorance of all American
talk radio hosts speaks for itself. NO

knowledge on why acts of high treason, are crimes against every American. The bushmob doctored the NIE, and Alex doesn't want Americans to know, because if they did, they ask, why does Alex do everything he can to escape those personally responsible for 911, while then asking for money to continue his fight against freedom in America. Again how much money do we have to pay Ron Paul or Alex Jones before they will allow the knowledge of the Iraq war against Human will is criminal? How much?

Obama! feel free to call on me to help out with a plan for judicial actions. That offer goes out to everyone in Palestine, Canada or Britain too. Russia, let's help out these fools by freely communicating, what say you? Justice for all is freedom to be. The Israeli cop killers must be brought to justice for war crimes. Those cops, were cops. And I, am a man.

Alex Jones Rocks!

Now Alex has problems in "my" mind because I am an ACTUAL genius, and he is generally, an idiot. Today, he did one of his usual commentaries, however this time, he was pretty honest with himself, and his love for Ron Paul. Ron Paul sells incompetence, and Alex corrected correctly!. that a.. sorry Ron but these banksters know they're robbing us as undefended blind men essentially. That's what I'm talking about!! Look, Ron Paul can be a dumb Ass, although, he's still not all that bad a guy. A Dumb guy on things like economics sure, Justice, warfare, Health Care, Social Security, ect. ect. but still., like a child learning of why the sky is funny blue, isn't all that bad a guy really. He's certainly not a war criminal, like Bush or Rumsfeld are. Doing 911 then sanctioning torture. While Neocons Champion sending illiterate American teens for death as war criminal. Think about it. Maybe he is..

-

ï¿½We have all these documents that are now publicly available that prove that these methods of interrogation were intentionally ordered by Rumsfeld,ï¿½

Let us understand. These actions "give" a guy like Willie Brand "the right" to RANDOMLY kidnap men, women, or children, and torture them to death for sadistic pleasure with his faggot Capt, Christopher Beiring. (I think that's how it's spelt). But anyway, this is the truth. A bushite is a godless Zionist whore of Nazi evil, an enemy of America, who wars YOUR Freedom with criminal "excuses", for refusing to support the arrest of those responsible for 911. A TRAITOR, and could be wannabe rapist, robber, or 911 mastermind ringleader. Torture is illegal, and warrants the death sentence, according to, Reagan's "War Crimes Act". Some only suggest, that this was why someone tried to kill him as honorable. Death to the torturers of our innocent families, torture they do without apology as Zionist Military "Judges". Instead today, where they get salaries paid in the billions by the zionist giving nation of, a-mirror-kay, echem, America. Johnny's America. A nation where Justice will rule for the favors of all treated equitably with or without you. Honor me in company my friend. We have no rivals.

"they do not understand, the private banker never covers the loan. Never does a private banker reach into it's pocket to borrow US to begin with - so as a consequence, the bankers have just pocketed all the 'free' loot for nothing, TRILLIONS, and are not saying why should they help anyone else up with charity?" Then went on to say, it wasn't any of our business with what they did with the money. (But for to cover criminal fraud in the derivatives market, where the true value of said commodities were backed by ZERO capital. ZERO DOLLARS. WORTH NOTHING. So, think about who's truly giving it always here until Johnny, the man who came out of nowhere, arrived to explain everything in five or six minutes.

Support Johnny America for Coast to Coast Radio Host!

-

Gaza: 'I watched an Israeli soldier shoot dead my two little girls'
http://www.independent.co.uk/news/world/middle-east/gaza-i-watched-an-israeli-soldier-shoot-dead-my-two-little-girls-1452294.html

Getting away with murder as 'God's Chosen' chosen
for death by war crimes trial more like. Death to
the criminal zionist enemies of Humanity. Zionists who
falsely accuse without evidence to respect our rights,
like TV corporated Americans who treasonously LIE,
'bin Laden did 911'. Enemies of Freedom for our
Humanity.

[JEWISH!] Arrest warrant: Ehud Barak
http://www.wanted.org.il/ehud_barak_en.htm

/ / For violations of the Rome Statute
& 4th Geneva Convention \ \

They are murdering Cops

2-Bombings target house of Abu Ubaida El Jarah,
Police Director in Sheikh Ridwan area.

3-Airstrike targeting Al Zaytoun police station.

Nazi Israeli are murdering Police Officers,
and the families that live in the areas near
them as once defended from criminals.

It's like saying, every Cop in America deserves
a death sentence by thousand pound radio-active
waste based uranium/plutonium war shells because
Bush stole the election, then committed 911 with
the Neoconned Partners of Public Crimes, Cheney,
Rumsfeld, Condi with General Ahmad and Myers. Now,
I ask all Cops, does that make sense to you as
still remaining silent? You can be a man too, why
don't we all just give it a try. To the Telephone
Robin! Israeli are attacking prisoners held
criminally in their own Death Camps!! GET ALEX
JONES ON THIS! and.... the ADL! er.. JDL.. er..
let US join forces for the common good of all,
as so we will benefit everyone. That means
Justice for all, especially the Taliban for
defending American Freedom by demanding evidence
to form a conclusion of capital accusation,
regarding an unsolved case of mass murder.
Taliban blamed it on concern for life draining,
!AMERICAN ENTERTAINMENT TV! sports, weather,
Music, and news about some, who knows war we are
committed to now die you for, for better or worse,
of mass death and suffering against innocent
Peoples all for glorious Neocon tyranny of inter
national private banker IMF enslavement plans!
in some far off distant places. America! I am
King Johnny.. I am from the Planet Earth, I've
come to share the knowledge of Justice in our

times on behalf of this, Our Future Great
Triumph over Evil. We come in Peace with
a sword for War Mongers, and a choice for
'lawless' grunts of ungodly action against
Life as we live it. Targeting school kids
deserves death sentences, don't you think this
value is what every soldier should hold proud
with Johnny in America? In Israel? In
Everywhere?

Chief Israeli Nazi Rabbi "All civilians living in
Gaza are collectively guilty for Kassam attacks"

ï¿½In spite of rising the blue flag of UNRWA on
our schools, the Israeli army has been targeting
those schools by missiles and tanks shells.ï¿½

U.N. special rapporteur on torture calls on U.S. to prosecute Bush and
Rumsfeld.

[SATANIC ENEMY] Israeli warplanes attack Gaza during Truse
http://www.presstv.ir/detail.aspx?id=83073&sectionid=351020202

Satanic Enemies of Humanity Kill 8 Yr Old Girl During Fake 'Ceasefire'
http://uruknet.info/?p=m50983&hd=&size=1&l=e

A MEMORANDUM OF UNDERSTANDING TO KILL MORE
http://desertpeace.wordpress.com/2009/01/20/a-memorandum-of-understanding-to-kill-more-pal
estinians/

/ / Dr. Condi was very smart when she declared
at the outset of the most brutal Israeli war on
Gaza that it was the Palestinian side which
is held responsible for violating the six
-month truce. \ \

She lies, Innocent Christians die.

Nazi argues it's good to get killed Jews by
breaking truces with prison camp.

They shoot Peoples indiscriminately telling US
that's how evil they are to argue it's Your
fault though.

This post was passed to near everyone in our Secret
Service defending Obama. Let US demand Justice for
the Victims of 911, by warranting for the arrest of
every Neocon Nazi Zionist pirate of OUR Jewish faith
for Public trial on LYING for War Crimes against
our dying Humanity. War Crimes against God.

A ZIONIST LIAR'S TRUCE

/ / live images of an Israeli helicopter hovering
above the city and dropping its white phosphorous
bombs on the city \ \

Again, the Zionist deserves to die by public trial
today to defend the Jewish faith. Look at usenet.
These demonic enemies go, 'yeah, Hamas broke the
truce', they do it to kill you. To steal the lives
of innocent Peoples to profit off our deaths as
victim.

Zionists are Satanic Demon Liars of Satan

FIGHTBACK

/ / Israeli forces demolished the house of the
Sammouni family in Gaza City after ordering
them to remain in it for safety. \ \

Palestinian Children found with bullets lodged in their head
http://jnoubiyeh.blogspot.com/2009/01/palestinian-children-found-with-bullets.html

/ / Israeli officials continued to deny on Saturday
that their soldiers had deliberately targeted
civilians, \ \

The Zionist is an
enemy to the God of Love and Justice, of Beauty, and
Children. A zionist LIES with a hatred unmatched in
Satanic hatred for the survival of our species. I
beg you, hunt to bill the zionist war criminal who
charges we will not succeed to see every last war
criminal on this planet hunted down to complete
extinction, by public trial, then Jewish firing
squads. The Zionist has bombed US, The People
indiscriminately with out cause. It was Nazi
Israeli that broke the truce to get killed
Jews for money. They starve Jews in Israel
to attract more charitable aid they can use
elsewhere. They, as Nazis, will continue to
murder Jews for money unless WE DEMAND, their
formal trials and public executions. They have
murdered our families, and they will pay will
their lives for it as the directly responsible,
and in no way, will escape our rages against
them as the enemies of every Human Being
Living for Freedom. Every Human that loves
children. They HAVE ADMITTED to targeting the school
girls for murder with lies they were caught
doing. THEY DON'T GIVE YOU EVIDENCE. And when we
get the facts, it's near always exactly the same
thing: they steal our Homes, they STEAL our
lives. God calls the Zionist Jew Enemy of

the Synagogue to Satan!!

"We also need a massive overhaul in Our news channel
prioritizing, including to add censorship free, open line
public communications. Done to gain value in learning from
the art of conversations. We need still to appreciate the
values of a free society where Justice is above all, the
measure of our success to communicate openly."

The Ungodly Murder of Innocent Men by Israeli Nazis
http://atheonews.blogspot.com/2009/01/summary-execution-in-southern-west-bank.html

/ / At noon an Israeli military jeep with four
soldiers entered Tameiziï¿½s land. After 15
minutes the man was thrown, blindfolded and
still handcuffed, into the back of the jeep. \ \

Let us not lose the focus of fact, that these
people of ourselves live in a concentration,
prison death camp, robbed of everything.
in Curfew near anywhere in "peace time". And
still, to this day, do Nazi Israeli CONTINUE
TO THIEVE the Homes of god loving folks in the
region, guilty of no crime but to have been
born into such brutal ungodly oppression
against Civilization. And to see, face no TV
opposition as American tax payers continuing
to fund such war crimes in our absent names,
is a crime on to ourselves if allowed to go
unchallenged. Johnny for Coast to Coast radio
host. Free the Slaves! Free the Slaves!

Binding U.S. law requires prosecutions for those who authorize torture
http://www.salon.com/opinion/greenwald/2009/01/18/prosecutions/index.html

The ugly secret of Barak and Livni, the truth about the Gaza rockets
http://www.youtube.com/watch?v=8rqDzXeA-PQ&feature=channel_page

[HEY WHAT THE.. THE LINK IS GONE ABOUT GODLESS
ZIONISTS MURDERING JEWS IN ISRAEL FOR MONEY!]

See my Jewish friends, these zionist liars
will never escape our love for Truth in this
our new age. Killing Jews for money is as
evil as found, negligently criminal, agreed?
Agreed.

Gaza: lives in ruins
http://www.youtube.com/watch?v=OFWxEtWcT8w

'Ungodly Enemies of Life is the only way
to describe it from here Tom. They again,

are attacking People indiscriminately for
murder as sadistic Satanic enemies of God'

Someone should ask what King Johnny, The
King of the Jews has to say on this subject
of a Zionist's complete absence of morality,
as inhumanly bereft any common decency among
our brothers and sisters. I mean for Christ's
sake Tom, THEY ADMIT to sadistically
targeting our children for MURDER - as some
kinda Satanic demon whore to Pure Evil - aka.
Wanted War Criminals for Public Trial. Just
as the Nazis were for similar outrages. Let's
hope men of America are least half they were
then, but we are suspecting, they will as of
usual, balk as cowardly slaves to the private
banker man ruling their minds, it's a, no
wonder. Where is there that purpose striving
for a greater future living in a just society?
Where is the Christ in their Christianity?
to financially support the arming of such
unlawful Zionist killings in silence against
Innocent Christians?

Free Radio International Broadcasts Alive!

Johnny Justice for Coast to Coast radio host.

BBC argues with Israeli Spokesman over UN School Bombing
http://www.youtube.com/watch?v=VPGP1xWEkkk

Where is the evidence to form any person's
verdict, if none is offered as in respect
for yourself as worthy the title of free
men? I ask as your self? Or are you as
the cowards of most in the American military
who refuse to speak for the arrest of those
who did US wrong on 911.?

King vs Obama on Gaza - Christian vs Zionist
http://www.youtube.com/watch?v=oegClx-t20U

-

For the Popular Will?

Alex Thomson shuts-up Israeli spokesman!
http://uk.youtube.com/watch?v=zIQZ1-RFq6A

Wow. The demon LIAR will also say Hammas broke
the truce, and Israeli started this by stealing
innocent peoples homes, then imprisoning
ourselves, the victims, in a death camp for

indiscriminate slaughter. While they continue to STEAL OUR CHARITY by breaking truces. What is it that YOU can't picture?

"The view from the other side, that the Qassams are a retaliation for the siege that starves the one and a half million inhabitants of the Gaza Strip, [a prison death camp,] was not mentioned at all."

Masada legend galvanises Israel
http://news.bbc.co.uk/2/hi/middle_east/7830416.stm

/ / they committed collective suicide - men killing their own families, afterwards each other, until one [evil zionist liar] remained to kill himself. \ \

ISRAELI IS A THIEF WHO CAN'T SPEAK OPENLY IN DEFENSE OF OURSELVES IN OTHER WORDS? That is right. They, as documented criminal, lose every debate personally since before the dawn of Civilization because their position is clearly unsound. They are criminals who murder People in hate for a freed Humanity. They OFFICIALLY steal Peoples homes in that country didn't you know they proudly proclaim it so? And steal humanitarian aid from starving children. Targeted to murder children specifically as publicly confessed, 'it is Hamas WE blame', not them as demonic child murderers. Hideously evil as ungodly sadistic savages. Enemies of YOU, enemies of them, and enemies of me, the King of Jews Christ fellow from beyond the grave. They are so evil to God and Man, they tarnish everyone of US to not win justice sooner by blaming the actual bad guys. Justice is Freedom.

/ / Those white phosphorus shells used on the Gazans are made in the USA according to Jane's Defense. \ \

Again, these peoples are not Jews. Being Jewish is a religion. These thieves of God are Satanic in their LIES to betray the common trust in our words, that bind all worlds to victory, called freedom universal. Even tales of the Devil have him keep his word, with verses specifically condemning the self to damnation for targeting the innocent for death. God's the Word. Every word inside a fool's paradise. Including the periods. Not as

like, I'm playing a word game, but that it in wonder, is all strangely here. Example: The Universe as it has existed always, is not separate from our 'pauses', or faulty drawn conclusions. The universe, in one sense, was as good as anytime, created 6000 years ago. AS TOO 50 billion. You say, impossible, I say no, study quantum physics, and know, I live this.. our existence is not scientifically separate from the timeless nature of consciousness, proven as not only theoretical, but actual. That is a first step at developing a REAL relationship with the living Universe if you want to as like an artist does - that TOO! can be just as thought static in it's orderly constructions for Atheists. (An Atheist is still mostly a fool here however.) Overall, for any, it's sorta simple: Life has left YOU in charge of YOUR fate. Now, do well to make something of this being as eternal Life reaching for balance, as your body does, and good cops do when bringing the bushmobsters to Justice. By Israeli calling for more murder against the innocent of your mind as racists and bigots they are openly, is still shadows of YOUR mind, YOUR WORLD.. get it, got it? God is in genius to set Life as this, as like, nowhere existing, but for as yourself within. Will you speak out for the Justice denied Humanity?, or not you? Atheists can be Just too!, but generally lose it on not understanding the intelligence of order is way beyond what they dream up with assumptions. All anyone has to do is ask themselves, who do you mean "God"? Atheists are ridiculous!, but, to each his or her own, we are on a path here, believe what you want to believe. This is not a faith initiative I'm bringing by keeping this real, I DEMAND JUSTICE BY OUR WILL BE DONE.

A zionist cabal of criminal pirates who murder Jews around the world for stolen money is seriously evil as criminal. What do you think? Let US have a open line discussion on this indivisible matter of rights to all as equals before who ever we proclaim, I AM.

I mean you right? Say it with me... "I" "AM" we are good to go.

-

George Galloway "The West has DOUBLE STANDARDS when it comes to
Israel"
http://www.youtube.com/watch?v=IIpvrOJQ0J0&eurl=http://whatreallyhappened.com/

ï¿½Main actions: Israel targets hospitals, United
Nations premises, Press offices, theaters and densely
populated buildings in west of Gaza. Additionally,
people are being used as human shieldsï¿½

A Zionist Nazi Being

See? A zionist Nazi argues it's good to get killed
Jews by breaking truces with a prison death camp,
cause look at all the free American Welfare money
we can steal through kicking-back AIPAC members in
Congress.

-

Harper complicit in Israeli war crimes
http://onlinejournal.com/artman/publish/article_4246.shtml

Canadians! Please war with words for open line
calls on the war crime enemy propagandist,
The Chorus Radio Network. CJOB STEALS millions
from Manitoba each year, and refuses all calls
for honesty in governing. They are actual
CRIMINALS.

Canadians Stand Alone
http://www.thestar.com/article/569872

Harper the proven war criminal
who will be going to prison, is the only person
on Earth that has publicly okayed Israeli Nazi
to target murder Christian school girls. Canada,
join me in demanding Harper's Public trial as a
war criminal. Prison for Harper who took a
honorable soldier who stated he refused to commit
war crimes against innocent civilians, and placed
him without trial in prison. Without warrant for
arrest. Harper, the Nazi Appeaser, is a War
Criminal standing against the Queen.

"Or is this another, popular amerikan past time,
of, who cares for the facts, we are at war with
God and Christ now?" Die bushite die Christ always
says against lawless torturers as mass murdering
thieves of Humanity.

shreveport man gets 15 years for stealing $100.00
http://wesawthat.blogspot.com/2009/01/shreveport-man-gets-15-years-for.html

Again, Americans need to demand the arrest
of the Judge and prosecutor for being openly
evil demons, as TRUE enemies to freedom in
America. But guess what? Americans will refuse
to even phone Alex Jones, or George Noory
to be hung up on. Just refuse as brain dead
zombies - as known in this circle, McCainiacs.
Did you hear Alex's NWOer yesterday state he
doesn't want anyone to speak as Justice for
Americans because to learn even the most basic
of precepts for Justice, he can't pretend he is
a Freedom Fighter begging US for more money?
Like multi-millionaire Ron Paul, who gave the
fixed election up to take our money and walk
away. How much money in the millions do we have
to pay them at GCN, before they will acknowledge
the Iraq war is a war crime? THEY NEVER WILL,
because the faggot owner has a son who's into
raping American women as lawless enemy of Life.
Americans are indeed, selfish, like all the plane
crash survivors telling US how they couldn't care
less that Israeli nazis are openly targeting our
Christian children for murder with their tax
money, as unimportant, to how long they stood on
a plane wing, now approaching it's third day, of
wall to wall coverage. Telling us again of how
Christ saved your life as a lifeless degenerate.
I, as Christ, am really starting to hate all
Americans in total now. How difficult is it to
pick up their phones? They don't, and I'm beginning
to believe it's because, like GCN, they really
don't care for the future of our Humanity being
left for dead as continuing victims to EVIL liars.

Nazi Israel Broke Ceasefire as Satanic:
The Bush Administration and The New York Times v. Amnesty
International
http://uruknet.info/?p=m50870&hd=&size=1&l=e

UN sites shelled with WPh after GPS coordinates given

Livini was reported to say today that, 'every
innocent person targeted by Israeli, as such
driving in ANY car, or on ANY bike, or walking
down the street as then directly murdered, Hamas
will be blamed for. Heil Hitler' Well, I made
that last part up, but do you have the ears to hear
the screams for mercy given by Humanity?, while
this, the evilest of JEW KILLERS in the known
universe, (targeted, and murdered countless Jews
in Lebanon as one example), believes no man or
woman living can speak directly against her wanting

to MURDER even more as ungodly... 'Until the tin
can rockets stop falling on Jews' standing in their
detention centers, or living at the garbage dump
BUT.... THEY BROKE THE TRUCE! THEY BROKE THE TRUCE.
They will rob and kill US all my INNOCENT friends
as LIAR Satanic if you, YES YOU continue to refuse
to support my/our demands for OPEN COMMUNICATIONS
for Justice ourselves. Johnny Dazzler for Coast
to Coast Radio Host!

'Secretary General outraged at shelling of UN building in Gaza'

"I conveyed my strong protest"

Not good enough. Public War crime charges warranting
Death by Jewish firing squad, is what is demanded of
our Humanity. Death to the zionists liar war criminal
enemies of Humanity, instead of US, who they target
for mass murder.

Google have attacked US again as Evil doers..
They have again destroyed my writing with war
criminal intent to deny these truths as men they
could never face me, because they are not. They
STEAL our voices.

They are jewish criminals, not criminals because they are Jewish.

HERE IS WHAT GOOGLE IS:

"End the illegal Human occupation of Jewish land in Gaza!"
http://stoptheism.com/

HUMAN

These war criminals need to be arrested for Murdering
LIES against the lives of every innocent Christian
and Jew. Godless zionist nazi bastards are as evil
as they are dumb. Get every man who defends freedom
truly to hunt down these satanic demon ENEMIES for
thee True Jewish Cause, to ask it why it lies as an
enemy to HUMANITY, to murder innocent others as
evil doing thief to Freedom. A thief of Jews
everywhere to know truly God as Love and Justice.
Not only will Americans celebrate these neocon criminal's
freedom to call for the murder of innocent Christians,
as he does without arrest, "Americans" too, will as
Satanic refuse to hunt the ungodly enemy of the Jewish
faith down as Nazi hunters. No, Americans, cowardly, are
committed to dying with the Nazi Elite, as such
to escape of the Neocon terrorists who participated
in the mass murder of America for more stolen money
as war criminals.

THESE ARE SERIOUS WAR CRIMES

Israeli soldiers say they have OK to KILL Innocent People

The links below lead to the AF values (K) for a self-resonant dipole in your range of frequencies. It is possible that they could roughly apply to your biconical, as it should be somewhat close to resonance across that band.

The antenna in these links was/is associated with a field intensity meter used in the VHF FM/TV broadcast bands.

The first link shows the multiplier for the voltage value measured by the meter, in order to determine the value of the incident field.

I was viewing the BOM (Bureau of Meteorology) weather radar of Victoria (17:00 07/02/2009) despite the fact that locals assure me that there was no rain at the time over eastern Victoria a number radar returns indicated very heavy rain at a number of the bush-fire sites. It appears that the radar was detecting the smoke.
I was under the believe that weather/rain radars gave returns from rain droplets and that smoke should give little or no return.

Any thoughts!

Weather radars declare a weather target based the amount of signal
recieved back or reflectivity of the target. The greater the
reflectivity the heavier the weather. Typically a series of 6
thresholds are set up with the minimum threshold indicating the
minimum level of precipitation the radar will report, under normal
conditions smoke will reflect less signal than is required to meet the
first threshold. Raging brush or forest fires are not normal
conditions as they put a huge amount of particulate matter and
moisture into the air. Otherwise there is not normally anything
special about weather radars that would allow it to tell the
difference between weather and smoke. Then again new technology is
always coming along. Most modern radars produce a digital image of the
weather in memory . This image is the processed by computer to declare
targets. If there is a difference between the signature of weather and
that of smoke it may be possible that software could or has been be
developed to tell the difference, if this is the case I am not aware
of it..

Usually the turns ratio of an impedance-matching transformer is the square
of the impedance ratio. If the turns ratio, primary to secondary, is N the
secondary voltage Vo is N times the primary voltage Vi but the secondary
current Io is the primary current Ii divided by N. If the primary is fed
from a source of impedance Zi, and Zi = Vi/Ii, then on the secondary side we
have Zo = Vo/Io = NVi/(Ii/N) = (NxN)Vi/Ii. So Zo = (N^2)Zi or N = square
root of (Zo/Zi).

An impedance ratio of 2 would require a turns ratio 1.4. I wonder if
there's a reason why this case would be different.

A quick look on Google turned up at least one company offering to sell the
instruction manual for this antenna. Might be worth a try.

Fundamentally the value should be close to, but less than a half-wave wire
dipole at the frequency of interest.

Hello Robert,

AF (K) for Eaton 94455-1 as a receive antenna:

30, 13.7
40, 13.5
50, 12.4
70, 7.7
100, 10.2
140, 16.0
160, 17.5
200, 12.5
Frequency in MHz, K in dB/m.

I don't have the manual, values are from a report, original source
unknown. It would be nice when somebody could confirm these values.

Hope this helps you a bit.

Best regards,

Wim

Ooops, I missed out the important word 'root' in my first line above!

The impedance ratio is the square of the turns ratio.
The turns ratio is the square-root of the impedance ratio.

I still prefer just a simple coax series transformer.
As an example, for a 40m loop, about 22 ft of
75 ohm coax will do the trick.

But that wouldn't meet the 2:1 transformer requirement.

It's been a long time since I've done field strength measurements, but I recall that each antenna came with a calibration chart for that particular antenna -- that's really what you're paying for when you buy one. I wouldn't expect a great deal of difference from one to another, but don't have the experience to say how much variation you might expect.

Should be pretty close. But calculating it, I show
about 22.7 feet would be the best length for 7.150mhz.
Assuming a 52 ohm feedline, and 75 ohm 1/4 wave
section and a Zr of 120 ohms.
I've used them before. Not really that critical on the
precise length as long as it's pretty close.

http://www.ets-lindgren.com/page/charts.cfm?i=3104C
Has typical cal charts for 3104C biconical. The
actual antennas are individually calibrated. The
antenna factors are not that far from Wim's example
above.

Frank

Godsmack - I Fucking Hate You
http://www.youtube.com/watch?v=FiPtHkfDXus

Hey! Johnny's new theme song playing when
I be bagging the bushite zionist whores of
the demon antichrist, Our Mr. Bush Jr. Bush
closed 911 investigations, Bush lied about
Saddam not letting inspectors in, Bush never won an
word fairly in his entire war crime life of
game rigging with naked deceit and betrayal to
the cause of Man, die bushite die. Rock on
my friends, rock on.

"Army deserter deported from Canada, now in U.S. jail"

This is a for real war crime. Why? there was/is
no cause for the Iraq war. Truly. Example: why
bomb if you can go anywhere without delay? To
only murder innocent People INCLUDING SOLDIERS
to thieve from ourselves as war criminals is what
any rational person comes to understand. When you
destroy bushite grunts who war God for rape, torture,
and enslavement of our species, you save the
innocent lives of their next victims. To hunt
the godless bushite enemy, is to love Justice
as our glorious Humanity winning over the lawless
nazi grunts of the Third Infantry - who'll shoot
anybody, blindly as cowards, led by a Saudi, Buford
Blount. Their "leader" who left Iraqi's largest
weapons depot undefended for looting. Qaqaa. Killed
many a bushite nazi grunting lawless coward by his own
treasonous brand. And mumbling bushite nazi grunts have
what to say about American teens made valueless
victims for Neocon bounties? "whore yay" That's
about it..

LETTERS NOW RELEASED PROVE-Bush Intervened-To Suppress Torture
Evidence
http://www.democraticunderground.com/discuss/duboard.php?az=view_all&address=389x4994330

This is called ungodly nazi war crimes against
innocent Human beings.

Obama Gets Tough to Shield Bush Torturers
http://chris-floyd.com/component/content/article/3/1694-protection-racket-obama-gets-tough
-to-shield-bush-torturers.html

Who does Obama think we are as 'United' together
on pro lawless torture against innocent 'others'?
Wake up people, we are under attack by those
who refuse US Justice to win Freedom for
anyone. "Conservative" retards are completely
lost here, because they do not have the
intellectual skills necessary to understand:
a person accused of a criminal offense without
any evidence is innocent. Or, how about, No one
deserves to be tortured for confessions on
crimes left then unresolved for actual
retribution. [Aegis OPENLY murders innocent
families for more American paying for zionist
monies - P2OG - YOUR Spouse, YOUR Child, YOUR
family].

Following the crime scene leads of 911 to nab
the actual evil doers is beyond the will of the
deaf, dumb and blind? with lawlessness gaining
for monetary loses due America as corporate
cheaters. We are Brilliant, of that much I am
certain. Conservatives are minimally, idiots.

Worst Person in American Broadcast Journalism
http://www.youtube.com/watch?v=ll2YW32bqi4&feature=channel

This is like, so profound. Gibson's condemnation
is directly aimed at his own ideas of the subject
he has no grasp of. Wow. profound. See though..
this "popular" FoxsNews celeb has zero interest in
helping America succeed to defend freedom through
lawful actions, because he has no sight of a better
world blindly destroying itself. Hey Gibson! why
don't you try and be a good guy for a change! No
joke. Wow. Profound.

-

Israelis forced mother to choose which of her children would die
http://www.daily.pk/world/middle-east/9374-israelis-forced-mother-to-choose-which-of-her-c
hildren-would-die.html

/ / the soldiers told her she had to choose five of
her children to ï¿½give as a gift to Israel.ï¿½ As
she screamed in horror they repeated the demand
and told her she could choose or they would choose
for her. Then these soldiers murdered five of her
children in front of her. \ \

Funded by the American tax payers as a gift to
God as our stolen Humanity. Equal rights for all,
especially the Taliban's position in defense of
America, demanding evidence to form our guilty
verdicts.

-

Obama Accused of Blackmail over Terror Trial Evidence
http://atheonews.blogspot.com/2009/02/us-accused-of-blackmail-over-terror.html

Again, Obama is taking a position to torture innocent
people here as a traitor to Just cause. Just cause to
live in a free society. Torture warrants the death
penalty under American STANDING Law.

Video: Cop Punches Woman In Face Four Times During Arrest For Riding A
Bike
http://www.liveleak.com/view?i=99c_1233639102

Top Cop Johnny Judge rules: Ten years in prison.
Maybe fifteen if the dumfuk grunt, back from the
war against Iraqi children as a traitor to American
values, shows no remorse for his crimes against an
American women either. Absolutely any cop or soldier
who disagrees as true contempt for our freedoms with
punishment against this nazi trash pirating our
police uniform, WILL WARRANT death sentences all

around to ACTUALLY defend liberty in my America.
Any American father who prides in killing innocent
Iraqis for the escape of the neocons for 911 is no
father. And a wife should get the hell away from
a male who enjoys murdering helpless innocent others.
Children in such families should be challenged
by relatives through the Courts to save the lives
of our endangered offspring. Again, without water
or food, Iraqi children are murdered by Neoconner
grunts irrationally everyday with nothing to say,
aka, without reason but as Satanic Bush whores, to
make our God as Humanity suffer further for their
escapes as actually selling freely, lawless zionist
savagery.

KILLING MORE OF THEM - reporting war crimes to the Police
http://www.youtube.com/watch?v=gB-KaIBDNJw

Again, a bushite has no commitment to defend
America, for it speaks nothing for the arrest of
the neocon traitors. traitors like themselves whom
will murder innocent folks like your Self to steal
our common values. Wouldn't you glory in seeing
these savage grunts who on video, indiscriminately
shoot innocent families, or bomb a city entirely,
executed by Christian Patriot firing squads? or
televised to fry in the electric chair for these
documented war crimes? I sure would. It would make
our world a much safer place to raise a family
secure in knowing, bushite grunts as enemies of
everyone, were hunted to extinction for their
crimes against our Humanity. Hunted by Johnny Law,
the True Spirit of America.

Johnny Law for Coast to Coast radio Host!

yaahhh im a real person! Wow eh? Now,
let US bag some bushite scum for the Gipper.

UK judges accuse Obama Administration of suppressing torture claim
http://www.timesonline.co.uk/tol/news/uk/article5661291.ece

Yeah really. What kinda world does Obama take US
for here? Does he actually believe we hold no
interest in being attacked as ourselves, the
innocent forsaken? A reminder: an American was
executed under Iraqi law without any evidence
brought against the accused, while the grunts
were offered an excuse to seek not the culprits
at the terror scene. The case was lightly reviewed
at democracynow, a year or two ago, and can be
found by searching for a grunt pretending to be

an ambassador to Romania. A case where the Judge's
life was threatened by a "General", where if he
didn't order the death of the innocent American
citizen, the grunt with the General would murder
US all right then and there. The Innocent American
was murdered as forsaken for value shared by
free men.

-

(pet bed cat trees...)
http://www.petbed-cattree.com/cat.html

Hey! this stuff for cats and dogs looks pretty
coool. Check it out if your a pet lover!

Near Impossible to believe!

/ / "similar themes go through all our streams. And it all
comes back as Confucius says, "Do unto others, as you would
have them do unto you." And Christ said that, Hillel said
that, Buddha said that, everybody says that, cause that's all
it is. But bushite, he wants to accuse People of criminal
offenses without any evidence, and indiscriminately slaughter
everybody in countries, for no good reason but to be OUR
ENEMY, an ENEMY OF ALL PEOPLE." \ \

-

AG Holder-- First, Jail All Bush's Lawyers
http://www.consortiumnews.com/2009/020309.html

For actual documented criminal actions against
American interests in defending ourselves from
indiscriminate robberies, tortures, or mass murder.

"Judges Bribed by Private Contractor to Sentence More Kids to Juvie
Detention"
http://www.philly.com/philly/opinion/inquirer/20090128_Editorial__Judges_Sentenced.html

Christ speaks!! Echem.. This is called a criminal
action to falsely imprison American children for
more stolen money. Will the contractor be arrested,
tried, then executed in America to defend American
children? Unlikely, because it isn't as important
as how fat Oprah is today, or as Alex Jones the
bigot would say, on how daily, the hidden NWO elites
are responsible for every criminal action against
Liberty in America, not war crime dictating LIAR
Bush who told US Saddam wouldn't let the inspectors
in without corporate news correction, Bush, who
closed Police investigations on 911 for Enron, KBR,
and the Kissinger associates. And certainly not

Bremer for personally stealing tens of billions,
no no no, "just puppets" "just puppets" as instead,
the Illuminati in other words not allowed spoken
understood with Alex Jones NWOers. I want a free to
speak arena where 50 percent of what Alex spews is
truly dumber than stupid. Why? because he is controlled
through his personal weakness of bigotry, to actually
believe foolish things as factual. Examples are
truly endless when we discuss Alex Jones'
dumminess, but here is one example. Alex states
911 truthers were attacked in a TV show as NWO mind
control- but, the "truther" he referred to
talked in the drama on there being NO PLANES!
A dis-info bushite stooge if ever was one depicted
with special effects. We suffer with his bullshit
every day, knowing if we tried to phone, would
not be granted a minute because I, in support
of Freedom for America, make all bigots look truly
dumb as fascists lashing out at nothingness to
divide our masses. And apparently, he can't have
America becoming greater for defending ourselves
fairly through Judicial actions.

-

which side are YOU on? by REBEL DIAZ
http://www.youtube.com/watch?v=8Dr05tXktSo&e

The side where a person accused of a criminal
offense without evidence is innocent, and in the
case of capital accusation, the false accuser
deserves severe punishment as an enemy to my
Humanity.

U.S. partner, not Hamas, firing rockets into Israel
http://www.palestinianmothers.com/profiles/blogs/us-partner-not-hamas-firing

/ / The probe found the Islamic Jihad rockets were
actually fired by Fatah. \ \ Whom Israel in response
to the confessed by all to be true facts, murdered
innocent Christian children in Gaza as war criminals.
Actually claimed it was regardless who shot the tin
can rocket that struck no one harmlessly. Again,
Nazi Israeli responded by murdering innocent Christian
children as war criminals with "disproportionate"
force. War criminals who murder Humanity to steal
our shared values.

-

Dennis Kucinich "Israel is Killing Children With Your American Tax
Dollars"
http://www.youtube.com/watch?v=HrtPpk6nhF8&feature=related

Israeli openly admitted that they targeted those
innocent Christian children for MURDER - as -
continuing "disproportionate" force in our names
as enemies of God and Humanity. They are not Jews,
but of the evilest group of lawless nazi savages
pirating the government of Israel away from US Jews.
I demand open debate in America, and Americans refuse
me by not likewise demanding international coverage
on the Coast to Coast radio networks. Let's change
this by communicating.

Ceasefires, Israeli-Style
http://sjlendman.blogspot.com/2009/02/ceasefires-israeli-style.html

They admit TODAY, as yesterday, and last week, month,
year, decades, that they target completely innocent
people for murder to punish Humanity for believing
in God as Just, or real freedom understood as practiced.
Libertarian couldn't give a shit on a issue such as this,
that they keep everyone ignorant of through hypnosis. Israeli
openly admit to thieving innocent peoples homes, to them
be sent at gun point, to live in a concentration prison
death camp.

http://www.davidduke.com/

/ / ..the Israel Prime Ministerï¿½s speech in which he
actually boasted of his power to order the U.S. President
as one would a dog. \ \ and all American men can't for
some god forsaken reasons, can't for their lives, phone
George Norry to be hung down on. George Noory is a "good
guy" for aiming to go ballistic against every American
who refuses criminal orders to destroy themselves.

Obama set to allow Bush-era ï¿½torture flightsï¿½
http://timesofindia.indiatimes.com/Obama_set_to_allow_Bush-era_torture_flights/articleshow/4067338.cm

What the fuk eh? Doesn't Obama know this
crime warrants death in America according
to the war crime act? Does he believe America
just will never have a chance to speak for the
interests of US as innocent Human beings he is
planning to torture as an enemy to Life?

Refusing to Defend American Values

Yoo: Bush okayed torture to outwit defense lawyers

This is why it warrants the Death sentence. Remember
corporatist Amerikan citizen, these torture victims
that include children as younger than a hundred, had
not been alleged to have ever committed a crime in
their entire lives. Victims tortured to death for the
pleasures of those Satanic, such as General Geoffry
Miller, who tell US today as confidenced, they do it
because, patsy wasted American soldiers will just refuse
to hunt them down for formal executions. Let's change
this for our Humanity in this future, to look back,
and know, American males were men of the World, who
stood for the principles enshrined within every living
Constitution. A free man shall not be jailed, or
tortured by anyone in our names as Governed, without
the perpetrator tried publicly for execution as our
Love of real Justice. As first degree mass murderers
warranted death sentences under the War Crime Act
ushered by Reagan!, all done in for our protections
of their next innocent victim - ourselves. Or
die a death in corporate tyranny worthy the title,
cowardly traitors to God and Liberty. Blackwater,
CACI, AEGIS, KBR and the like will all be hunted to
extinction for refusing to quit their lawless Rape
and mass murder, murders done for more stolen money
as America's name high-jacked. The Lawless enemies
shall be prosecuted by the honorable Soldiers of
the Good old, Red White, and Blue. Count me at
our words on this, I am,

King Johnny

-

Ungodly Israeli Nazi LIARS Continue to Murder Children after "Truce"
http://www.youtube.com/watch?v=-HQO0774lx4&feature=PlayList&p=4199C9262539936D&index=0&playnext=1

A truce means nothing to Hamas?, who states
much of no complaints as in support of Israeli
Nazi lies, why? Have you seen where a blimp is
traveling about five miles an hour, fire bombing
thousands, and none have even a pullet gun, never
mind an Iranian rocket launcher to shoot the Satanic
demons down for God as Love? Why doesn't Hamas
at least admit, like an Israeli General has,
to be funded by Zionists for cash gains paid for
by Zionist Amerika? Why? Why is it that Hamas
suffered near no loses, but all the Cops who
voted who knows, died murder victims trying to
defend our family from Texan child rapists?
Along with thousands of others targeted as
innocent Peoples? Targeted. Why? Nazi Israeli
broke the truce!! THINKTHINKTHINK Demand coverage!
Hamas certainly isn't. ..maybe because they're
illiterates on the Cause of God's Will being
Just?

Bushwhoring Enemies of the American Police

What a demon enemy of life these bushwhore enemies
of American Liberty are eh? No concern whatsoever,
for all the teen soldiers conned to die for those
who committed 911 in NYC. The millions of bombing
victims, the tortures, the rapes of American women,
STILL, TO THIS DAY, left undefended by "the law".
Evil enemy of everyone these demon fuks are. How
difficult is it, to understand the facts they feign
complete blindness on? They WANT to con you as the
coward to life they are, willing to kill America to
make their antiChrist lawless enemy Mr. Bush happy.

From years after the fact still demanding Justice now:
http://groups.google.co.uk/group/alt.military.uk/browse_frm/thread/ca0e34fb32caeb0a?hl=en&scoring=d&

Huh? "at last been disarmed..." ? How does he figure? The equation hasn't changed. Example: The same unaccounted anthrax, (that was disintegrated into ash), still is not able to be measured as completely accounted for, (never could be), but this bushwhoring war crime apologist, tells US, it was only though the lawless murder of our good friends and family for countless generations, that he now attests without reason, or evidence, to find Iraq in "fact" disarmed of it's still nowhere to be found, weapons of mass destruction. (An irrational reason he pronounced previous in corporately broacasted public support of instigating heinous war crimes against our humanity under the leadership skills of the evil lying demon antiChrist, our Mr. bush Jr..)

Ron Paul defeats 5 TV 'experts' in 10 minutes
http://www.youtube.com/watch?v=0k92fTDReHg&e

Ron Paul is a traitor. They stole the cash Ron. And, the Iraq war is a war crime. But Ron, the Fascist, doesn't want THESE FACTS uttered. Why? Because wiser men would prevail, wiser men like me who understand buying in bulk is cheaper. Those like Christ who understand, who KNOW, the banker doesn't cover our loans - so why give them as much as a taxed red penny?, let alone trillions as officially unaccounted for? They are stealing the cash Ron. Ask yourself: Why has Alex Jones forbidden his bushwhore cult from understanding Bush doctored the NIE?, or of iron flowing like water from the towers? Because wiser men would prevail and he can't have that. He called shooting innocent men in the back, an act of liberty. I, an actual god, unlike Alex, lie near never, but maybe to myself when I'm lonely. Alex yes will tell you rapists are free to do what they will in Texas to American children, un-arrested, but he won't mention it when the police chief is with him on air, talking about how he'd like to be exempt from traffic tickets for being so popular. NO MENTION of the rapists walking away without arrests made, no mention of Bush's documented treasons on 911. Where are Alex's priorities? In selling YOU out so he can be wealthy like a bankster?, and have special rights over everyone else that drives drunk, or speeds? a big hero standing over our dead soldiers yelling, I told you so, I told you so, I was right, I was right.

Again, understand: It is not by my will to deny
open debate with America, it is Alex, and his
demon buddy George Noory that denies out Humanity
this right. And when people try, like Peggy, or
Black men on Jewry, Alex lies cheats and steals
our wills for further thefts. Ron Paul's family has
millions taken from loyal Alex Jones fans. MILLIONS!
Does Ron do commercials with that money highlighting
the bushmob's plan to invade Afghanistan, dated two
days prior to 911 for Enron? Of course not, wiser men
would prevail to expose him as the charlatan charity
raider he is regarding Health Care, Social Security,
Public Schooling, earmarks.. It is unfair to measure
Ron against corporate nazi zionist whores of MSNBC who
willing, openly, kill American teen soldiers for
criminal neocon gains, as an honorable gentleman's
talk. Half honest People like Ron are extremely ignorant
on the workings of our world. EXTREMELY. I joke here not.
Evil is the deceived disguised - translated - evil
people are always dumb.

Corporate America says no, Charlie Manson was a genius,
but not, that most Americans are prone too easily to
suggestive states where they can be made to believe
anything blindly. Think: what does, "bin Laden did 911"
mean anyway? You should know of what I'm trying
to teach you here. That is how
Alex knowingly or otherwise, steals our rights, by
beating off he knows everything already. And some,
if not most, actually believe him without knowing
squat either. It's sooo easy that way - no study
required!! LIBERTARIAN HELL! Everything is not on
the Internet, where it near should be, but regardless,
a Libertarian can't be bothered to read anyway.
"Free Talk Live" is the best example for this: the
two hosts are unbelievably ignorant on just about
every single subject under the sun, but beat
CONSTANTLY, on how greatly wise they are as drop-outs.
You wouldn't believe any of them when they speak on
Freedom, if you simply understood, an innocent man
does not deserve to be in OUR prisons, or tortured.
Under any circumstances that Obama has excepted for
our excuses. Magna Charta. But in Alex's 'genius' mind,
he doesn't need to actually understand he is a for
sure bigot, (measures another unfairly in a group HE
concocts from blind hate or personal fear - typical
CONSERVATIVE and/or racist) who has no problems with
that at home, or at work. Provable in seconds by
OPEN DEBATE, but Alex ain't gonna take our calls
because, he can't for the lives of every People

person thought of here, admit he could have
something to learn, therefore, the NWO is
unstoppable in his brain washed cult of indifference
to Justice practiced for the benefit of all treated
fairly. Why? He's not wise enough to respect the great
minds of the audience, and I personally believe,
he doesn't even have the good judgment to own
a gun. (I mean, why wouldn't Alex find my stories
of OUR Justice system triumphing by my single hand at least
minimally beneficial to his blind cult followings? to not
hang up on me immediately while spewing lie after lie
on how I'm top secretly a dis-info NWO artist working
for Bush? or whose voice sounds too friendly to trust?
like he has done the last four times I've phoned -
Hey! I can be an asshole if you want - no prob.)
Perhaps it's near because, Alex Jones is blind, and
as such, could actually be found guilty in Texas for
murdering those two innocent black men shot
in the back with his approval to release the murderer
from a RIGHTFUL death sentence prosecution. "law of
Parties". He is a party to the crime, for he worked to
support the release of the FOR SURE, FIRST DEGREE MURDERER.
Sound like an America you could live with? I didn't
think so either. I wanna be Alex's Attorney. Texas is
a State of massive lawless corruption, as dire
incompetence in legal affairs where they OFFICIALLY
plan executions against innocent People not established
to have harboured criminal intent! With Jury Trials!!!!
!!!!!!!!!!!!FINING THEMSELVES GUILTY!!!!!!!!!!!!
While Alex does express murderous criminal intent,
and the Police chief calls him a good man for no
scary pressures. What the fuck is wrong in Texas
where they mess themselves like this regularly?
Imagine, while Bush with the Neocons escape, and
Zionist Israeli target to murder Christian School
girls OFFICIALLY, Alex doesn't want to have to pay
traffic tickets like the rest of US. What a douche bag
to tell he LEADS our Truth movement I say. Now, I'm
not saying he shouldn't contribute with the truths
WE SHARE, far from it, it's just he can't have our
cut off switch to silence our objections to his exposed
foolishness, and/or blatant criminality. I'll give him
a chance, for starters, to criticize any position I take
while we all publically call on ourselves for
assistance internationally. Like on his "buddy",
George Noory, deserving to be tried Publicly for the
traitor he is, and be formally executed after his day
in Court. Our Courts. Teen soldiers have been conned
to die by George Noory for the escape of the neocon
terrorists who committed 911 with Condi, Runsfeld,

Bush, Myers, Tommy Franks, and General Ahmad. AND
HAPPY GEORGE NOORY KNOWS IT - and cons with lies
naked to the ear of any who can listen or hit record.
A NAKED traitor to the cause of Liberty if we ever knew
one regarding the War Crime facts of Iraq. .And
Ian Punnet is an evil godless enemy Bush whore who
lies too to get YOU killed as the innocent soldier
forsaken so don't forget.. It's YOUR life. It's God's
Gift. Now support our rise for popular international
debates to get these Neoconners behind bars
awaiting Public Trials! "Public"thatsoyu!! Get to
the Phone to call someone to care man.. Johnny
Jesus has arrived! Justice Will Be Done in this,
Our Kingdom to Come.

Justice to the war criminals of
indiscriminate warfare would better serve ourselves
to halt for our safety. The bushmob did 911.

1. The ISI's General, Mahmoud Ahmad funded 911's Atta

2. We have video of iron flowing like water from the towers

Humanity Under Attack by the Zionist Enemy of Life

GAZA APPEAL THE BBC & SKY REFUSED TO SHOW
http://www.youtube.com/watch?v=c9kwpxlZorI

Not only that but the BBC argued that to show
innocent Human Beings suffering, in CRITICAL
life threatening need of desperate food and
water that Israeli nazi stole, (because they are
unlawful murderous thieves), would have them look
like they were partial to serving Humanity's
interest in compassion for US humans. Over the
Israeli terror Nazi tactics of indiscriminate
slaughter for more Amerikan welfare. Wicked evil
nazi bastards who too, DO NOT THINK IT BEST to
report Peter Powers committed the London bombing.,
Oh yeah, and mercury is neural toxic, anti-psychotics
make us crazy, and sodium fluoride makes us
stoopider while weakening your body for big cash
surgeries - ultimately leading to a profitable
death for dah' winnahs.. So, they, the BBC-NWOers
just needed to avoid the bath or shower,
humidity, Pepsi's purified bottled water product
lines, koolaids, swimming pools, Jacuzzi, Hot Tub,
Sauna, private Whirl Pools, and.. blh blh blh

/ / the FBI says no.. There is not a thread of
fact a zionist offers to form YOUR own mind in
respect for your rights being equal to ours. \ \

Who is the guy who keeps writing such things,, and
shouldn't he be recognized as Promotional to raise
all spirits towards a better future? I'm with him.

The U.S. Is Required To Bring George W Bush & Donald Rumsfeld Before A
Court! U.N. War Crimes
http://www.youtube.com/watch?v=BRAlqkPbjP0

Olbermann | Bush Years: 8 in 8 Minutes
http://www.truthout.org/011809Z

Bush and Cheney are traitors to the cause of
American Liberty. To leave them free, is to leave
America un-guarded from further transgression.

The bushmob doctored
the NIE. Conned Congress, and Soldiers. Did 911,
by closing criminal FBI investigations immediately.
Alex and George don't seem to want US to know
these FACTS that demand arrests of the culprits
responsible for high treason against Johnny's
America. Alex wants your money, and EVIL George,
our enemy, wants your soul stolen for Satan.

Turley: Obama 'accessory' to war crimes if no prosecution
http://rawstory.com/news/2008/Turley_Obama_accessory_to_war_crimes_0127.html

Understand, Alex Jones doesn't want Justice
for Americans because he loses out to better
men that usher a greater life. He doesn't want
the evidence of George W. Bush made public to
defend American teen soldier's lives. The true
fascist Alex Jones, who in silence supports the
escape of Bush for treason, will fail our true
voice for Justice in our times. WE DO NOT rule
the truth we share equally committed to defend
ourselves from lawlessness. And you'll never
rule my right to speak freely over your intent
to sell us all out for monetary swindles, just
like Ron Paul did. Understand: Ron Paul doesn't
even acknowledge 911 was an inside job, or, that
Bush gave zero evidence to form Your opinion.

Alex Jones, the Slave, told US today that
he challenged Bush for eight years - Bushite
lying nazi traitor. Not only that, but he
also ridiculed those who wish to blame Bush
now for anything! Again, he doesn't want
Justice where bad guys can't steal from
ourselves unrepresented. Ron Paul is a
multi-millioniare, made rich by charitable
aid conned from Alex Jones' NWOers! Alex
Jones doesn't have a problem with that, we

do.

Israel to be Judged - Universal Petition
http://www.tlaxcala.es/reponse_signataires.asp?lg=en&ref_campagne=10&Page=1

The demon LIAR zionist Israeli is a godless enemy
of Humanity, much like everyone at Foxnews, CNN,
BBC, and the CBC. Our revolution against the godless
bushite shills, will not allow our revolution
through speaking honestly, (to become of ourselves
something greater), a chance to be televised for
our benefits. Bush closed criminal investigations
immediately after 911. According to the FBI and
Senator Dashle. CNN says you have no power, Foxnews
says you have no power, the BBC says you have no
power, the CBC, the same, like Alex Jones NWOers...
but well, don't believe it. YOU Do have the Power.

http://www.iran-daily.com/1387/3324/html/east.htm#s359247

/ / International attorneys have filed war crime
charges against 15 Israeli political and military
officials including Ehud Olmert, Tzipi Livni and
Ehud Barak. \ \

-

We must demand open communications to bring back
values WE ALL would agree to through polite debate.
"Conservatives" don't want this Freedom idea
expressed in general terms because, a "conservative"
is universally, minimally. a bigot. Why? Life isn't
like, their way, - then- all other opinion under
the sun on how things actually get done. (Aka
"socialist" traffic light repair men, or "liberals"
who want to treat The People fairly). Or who we are
as equals to our laws fairly practiced. Pay attention
to what I am saying here. Liberals can be Dicks with
a capital D too of course. But a Hannity couldn't
survive 2 minutes with me speaking on his very real
treasonous behavior in OUR public arenas. Behavior
done to escape the 911 culprits from the long arm of
the Law, with his conscious will of criminal deceit
exposed, we all learn to better defend ourselves.
And Shawn Hannity can't have that for ourselves, he
takes too much money from ourselves as talentless by
keeping US in the dark dying needlessly for traitors

never elected publicly.

Who am I you ask? Johnny Law. at your service. Look
me up with usenet to discover, we live in a world of
idiots everywhere pretending to be somebody by lying.
While I want US all to truly improve our condition by
actually understanding how bad off we are by failing
to respect ourselves for correction. Too many, know
it alls, with not enough to know you need evidence to
form a guilty verdict against an accused man or woman.
Not according to CNN, CBC, MSNBC, Foxnews and the like
however. Let's change this by supporting my challenge
for top billing at the Coast to Coast radio show hosting.
Look for me coming soon!!

-

Unseen Gaza High Quality: Part 1 of 6
http://www.youtube.com/watch?v=UeezoWRu1FU&eurl=http://whatreallyhappened.com/

Why is it that numerous visits don't change the
view count? What is this business of a=a+1, the
top secret, I'll go rhythm, that is way beyond
our comprehension in it's scientific complexity?
For Americans, okay, but the Human species just
isn't this dumb.

While Zionists OFFICIALLY target Christian school
girls for mass murder, CNN instead reports that
bushite grunts attacked girls in Afghanistan, posing
as Taliban. I WILL every celeb at CNN to be arrested,
tried and executed for the reporting they have done
today without facts. Remember: the Taliban played no
part on escaping those responsible for 911, and opened
schools for girls, and were brought together on the
single purpose to defend women. Death to CNN reporters
to LIE for killing OUR school girls. I HATE zionist
enemies of Humanity and God I am.

The Torture Ban that Doesn't Ban Torture
http://atheonews.blogspot.com/2009/01/torture-ban-that-doesnt-ban-torture.html

/ / Obama's Executive Order bans some -- not all -- US
officials from torturing but it does not ban any
of them, himself included, from sponsoring torture
overseas. \ \

Is America a nation of Law to Live freedom?
Because this SPECIFIC deviant action of Obama warrants
the death sentence under Reagan's "War Crimes Act".
SPECIFICALLY. Or, is it you falsely believe Obama
can do no wrong against innocent people here, where
an illiterate nazi grunt, maybe from South Africa,

will kidnap YOUR children, and torture them to
death for sadistic pleasure, with as they did using
power tools caught in Iraq, according to Iraqi
government official(s), and several soldiers from
Oregon, all because Obama has given an ILLEGAL!
"excuse" to NOT support following the crime scene
leads at our REAL murder scenes? Again, death to the
bushite dumfuk enemy of God, death to the enemies
of a freeing Humanity striving for a just society.
Obama needs to be arrested for this under the Law
as it stands I'm sorry to say my friends. Why?
Torture is illegal in all 50 states, (as Reagan
directly planned), no matter where you ship the
innocent victim to, or from! Read the War Crimes
Act, then demand Justice today, otherwise, it's
YOUR funeral. Obama wants to secretly torture
Peoples here, while lying to US ALL that he doesn't!
A TRAITOR! Who also wants to give bankers 100s of
billions of dollars more to disappear, that WE pay
for, out our door, never to be seen as our own
again.

http://video.google.com/videoplay?docid=6546044203900048624

Alive We Say

And Alex Jones gives us the same guy twice
a week that blames the Illuminati, while
encouraging that YOU TOO! can get money
for nothing like the banksters. Just give
the Alex Jones', NWOers, the "truthers" money
money money money. No time for affording the
explanation that the TREASONOUS bushmob
doctored the NIE. That Saddam wasn't in
violation of 1441. That a NEOCON is
identifiable for it's demonic LIES
against God and Man. Never to tell, the
private bankers don't cover OUR loans,
that Bush PERSONALLY worked to close
Police investigations immediately after
911 (obstruction), or that WE have video
of iron flowing like water that PROVES,

without doubt, bin Laden couldn't have
single handedly placed the explosives
in the buildings, or stole the black boxes.
Because someone surely would have spotted
him dragging his dialysis machine what with
all the professionalism of corporate news
media coverage regarding our horribly
suffering worlds. Alex Jones ignores the
treasons of Bush, as a Bushwhore, and
instead, tells US of how Obama is Bush on
steroids. He only wishes. What about
Justice for Americans Alex? Why for do you
forsake ourselves? For money? What about
the lives lost to mass murder, that you
allege to champion OUR TRUTH without saying
much of anything on real Freedom?, on real
Justice like your deviant election rigger,
Ron Paul? Well, no wonder, Alex told US he's
into shooting innocent American People in
the back as a tyrant of evil, a white Devil
if you will. Kids too if you dare look in
his back yard for a copper. See? Now if Alex
doesn't allow US to speak, more and more will
understand to know why. I am a defender of
all that is right and just in this world,
because I don't need to lie like Alex does on
a huge host of issues. I'm more like Jessie
Ventura, in where I don't need/want to lie.
If I end looking foolish, (of which I like
never truly am), it's a benefit, because that
way, I've learned something. Alex knows
everything already, and 'is always right'.
Like I say Retarded. You weren't right by not
understanding that the banker doesn't cover
the loan. One example of easily hundreds. He's
a typical, he knows it all, know nothing dumduk
American. Hear him on health care speak as
Ron Paul does, and know, I defeat them in under
ten seconds. TEN SECONDS. This is why he hasn't
in years, allowed me to speak more than five
or six words. He's rather all America die, than
admit he does NOT rule our 'Ocean of Truth'.
I want the challenge of opposition through debate
to PROVE my skills beyond reproach. Alex,
every time, just hangs up on anyone who tries
to improve our communications by factually
speaking. Why? Because he IS TRULY deeply
ignorant on what freedom or Justice means. Why
we have law. What a consensus is. Allan Watt is
severely disabled in this regard, another Alex

Jones favorite. And this is why, Allan can't take calls openly either. He has jerked off with himself too long to quit now learning super basic precepts, for like Alex, he "knows" the inner workings of the 'genius' NWO elites. Not Law 101, not Bush, not Rumsfeld, Not Condi, not Torturers, not bank robbers, rapists, or even petty thieves. Allan Watt isn't a bad guy, he's just a chauvinist pretending he actually knows something, when his real disability is directly related to his absence in understanding understandings. Doubt is a near foreign concept. A challenge for Allan: can you get your 'genius mind' around the fact that Peter Powers did the London bombings, and not the Illuminati of 1463? and if not, why are we so dumb to our present plight that way? Don't get me wrong, Allen has much to offer, it just isn't the issue right now on saving our dying futures. Maybe I was too hard on Allen, he is really actually kinda cool. Alex Jones too has many incredible moments of ecstatic clarity increasing in all they joy of seeking enlightenment. .. Ok - but this is serious business that requires little dilly dally with what we'll have as a side dish in Paradise Lost. We are talking Human Lives have been destroyed by our inaction to remedy these failures to communicate effectively. and.. Jeeze, the weight of my responsibilities, as just plain John, being a/the Legos Man - for like the Family and everythings, get's me never forgetting, all we got are these words left dormant from the power they truly possess in the minds of the wise asses. And.. here I am. I'm a Talker of Words looking to make a break in the NewZbiZ. Zzzz... Alive We Say! Alive!

King Johnny, from Earth, has come for talks.

-

The Zionist enemy, the most evil nazi sons-of-bitches who openly advocate tyranny and oppression through mass murder of ourselves as the innocent left targeted defenseless. Enemies of Jews everywhere, the Zionist cares not for facts on who's Life it destroys for stolen gain by lying. That's why they target Jews, for fear the Light of Truth would expose them as the Nazis they are.

Hamas doesn't have a military though, so,
why not demand the arrests of those who
broke the truce, and murdered innocent people
indiscriminately, on plans more Jews would
die for cash profit? Profit paid for by
zionist amerika? - the false imprisoning
torture and rape center for Neocon
Freedom.

The self-defence defence
http://www.guardian.co.uk/commentisfree/2009/jan/23/israelandthepalestinians-gaza

/ / This has been a central theme of the war in
Gaza: not that hundreds of innocent people were
killed, not that over 5,000 were horribly injured
and not the sky-high human and monetary cost of
wrecking homes or razing infrastructure. \ \

Court petitioned to arrest Livni upon arrival in Brussels
http://nawaat.org/portail/2009/01/23/belgian-court-petitioned-to-arrest-livni-upon-arrival
-in-brussels/

"We believe there were dozens of IRGC
personnel in the Gaza Strip during the
war," an Israeli source said. "Some were
killed; others went into hiding, and
others escaped."

See? the demon enemy of God speaks no
evidence as a TRAITOR to every Jew. A terrorist
nation that still steals humanitarian aid in
our public realm of left defenselessness. The
false allegation deserves a death sentence
by Jews against the war monger Zionist enemy.
A cause that Iran should champion, if in fact!,
this allegation by OFFICIAL WAR CRIMINALS WHO
TARGET FOR MURDER OUR SCHOOL GIRLS, is on it's
face, unsubstantiated as patently, demonically
false. As typical from any godless Zionist.

Where are the Americans asking for the
formal arrest of Bush for high treason?
Whoring for Alex Jones's contempt for REAL
Justice? The ignorance of all American
talk radio hosts speaks for itself. NO
knowledge on why acts of high treason, are
crimes against every American. The bushmob
doctored the NIE, and Alex doesn't want
Americans to know, because if they did,
they ask, why does Alex do everything he
can to escape those personally responsible
for 911, while then asking for money to
continue his fight against freedom in

America. Again how much money do we have to
pay Ron Paul or Alex Jones before they
will allow the knowledge of the Iraq war
against Human will is criminal? How much?

Obama! feel free to call
on me to help out with a plan for judicial
actions. That offer goes out to everyone in
Palestine, Canada or Britain too. Russia,
let's help out these fools by freely
communicating, what say you? Justice
for all is freedom to be. The Israeli cop
killers must be brought to justice for war
crimes. Those cops, were cops. And I,
am a man.

Alex Jones Rocks!

Now Alex has problems in "my" mind because I am
an ACTUAL genius, and he is generally, an idiot.
Today, he did one of his usual commentaries, however
this time, he was pretty honest with himself, and
his love for Ron Paul. Ron Paul sells incompetence,
and Alex corrected correctly!. that a.. sorry Ron
but these banksters know they're robbing us as
undefended blind men essentially. That's what I'm
talking about!! Look, Ron Paul can be a dumb Ass,
although, he's still not all that bad a guy. A Dumb
guy on things like economics sure, Justice, warfare,
Health Care, Social Security, ect. ect. but still.,
like a child learning of why the sky is funny
blue, isn't all that bad a guy really. He's
certainly not a war criminal, like Bush or
Rumsfeld are. Doing 911 then sanctioning torture.
While Neocons Champion sending illiterate American
teens for death as war criminal. Think about it.
Maybe he is..

-

ï¿½We have all these documents that are now
publicly available that prove that these
methods of interrogation were intentionally
ordered by Rumsfeld,ï¿½

Let us understand. These actions "give" a guy
like Willie Brand "the right" to RANDOMLY kidnap
men, women, or children, and torture them to
death for sadistic pleasure with his faggot
Capt, Christopher Beiring. (I think that's
how it's spelt). But anyway, this is the truth.
A bushite is a godless Zionist whore of Nazi

evil, an enemy of America, who wars YOUR Freedom
with criminal "excuses", for refusing to support
the arrest of those responsible for 911. A
TRAITOR, and could be wannabe rapist, robber, or
911 mastermind ringleader. Torture is illegal,
and warrants the death sentence, according to,
Reagan's "War Crimes Act". Some only suggest,
that this was why someone tried to kill him as
honorable. Death to the torturers of our
innocent families, torture they do without
apology as Zionist Military "Judges". Instead
today, where they get salaries paid in the
billions by the zionist giving nation of,
a-mirror-kay, echem, America. Johnny's America.
A nation where Justice will rule for the favors
of all treated equitably with or without you.
Honor me in company my friend. We have no rivals.

"they do not understand, the private banker
never covers the loan. Never does a private
banker reach into it's pocket to borrow US
to begin with - so as a consequence, the
bankers have just pocketed all the 'free'
loot for nothing, TRILLIONS, and are not
saying why should they help anyone else
up with charity?" Then went on to say, it
wasn't any of our business with what they
did with the money. (But for to cover criminal
fraud in the derivatives market, where
the true value of said commodities were
backed by ZERO capital. ZERO DOLLARS. WORTH
NOTHING. So, think about who's truly giving
it always here until Johnny, the man who
came out of nowhere, arrived to explain
everything in five or six minutes.

Support Johnny America for Coast to Coast
Radio Host!

Gaza: 'I watched an Israeli soldier shoot dead my two little girls'
http://www.independent.co.uk/news/world/middle-east/gaza-i-watched-an-israeli-soldier-shoo
t-dead-my-two-little-girls-1452294.html

Getting away with murder as 'God's Chosen' chosen
for death by war crimes trial more like. Death to
the criminal zionist enemies of Humanity. Zionists who
falsely accuse without evidence to respect our rights,
like TV corporated Americans who treasonously LIE,
'bin Laden did 911'. Enemies of Freedom for our
Humanity.

[JEWISH!] Arrest warrant: Ehud Barak
http://www.wanted.org.il/ehud_barak_en.htm

/ / For violations of the Rome Statute
& 4th Geneva Convention \ \

They are murdering Cops

2-Bombings target house of Abu Ubaida El Jarah,
Police Director in Sheikh Ridwan area.

3-Airstrike targeting Al Zaytoun police station.

Nazi Israeli are murdering Police Officers,
and the families that live in the areas near
them as once defended from criminals.

It's like saying, every Cop in America deserves
a death sentence by thousand pound radio-active
waste based uranium/plutonium war shells because
Bush stole the election, then committed 911 with
the Neoconned Partners of Public Crimes, Cheney,
Rumsfeld, Condi with General Ahmad and Myers. Now,
I ask all Cops, does that make sense to you as
still remaining silent? You can be a man too, why
don't we all just give it a try. To the Telephone
Robin! Israeli are attacking prisoners held
criminally in their own Death Camps!! GET ALEX
JONES ON THIS! and.... the ADL! er.. JDL.. er..
let US join forces for the common good of all,
as so we will benefit everyone. That means
Justice for all, especially the Taliban for
defending American Freedom by demanding evidence
to form a conclusion of capital accusation,
regarding an unsolved case of mass murder.
Taliban blamed it on concern for life draining,
!AMERICAN ENTERTAINMENT TV! sports, weather,
Music, and news about some, who knows war we are
committed to now die you for, for better or worse,
of mass death and suffering against innocent
Peoples all for glorious Neocon tyranny of inter
national private banker IMF enslavement plans!
in some far off distant places. America! I am
King Johnny.. I am from the Planet Earth, I've
come to share the knowledge of Justice in our
times on behalf of this, Our Future Great
Triumph over Evil. We come in Peace with
a sword for War Mongers, and a choice for
'lawless' grunts of ungodly action against
Life as we live it. Targeting school kids
deserves death sentences, don't you think this
value is what every soldier should hold proud
with Johnny in America? In Israel? In

Everywhere?

Chief Israeli Nazi Rabbi "All civilians living in
Gaza are collectively guilty for Kassam attacks"

ï¿½In spite of rising the blue flag of UNRWA on
our schools, the Israeli army has been targeting
those schools by missiles and tanks shells.ï¿½

U.N. special rapporteur on torture calls on U.S. to prosecute Bush and
Rumsfeld.

[SATANIC ENEMY] Israeli warplanes attack Gaza during Truse
http://www.presstv.ir/detail.aspx?id=83073&sectionid=351020202

Satanic Enemies of Humanity Kill 8 Yr Old Girl During Fake 'Ceasefire'
http://uruknet.info/?p=m50983&hd=&size=1&l=e

A MEMORANDUM OF UNDERSTANDING TO KILL MORE
http://desertpeace.wordpress.com/2009/01/20/a-memorandum-of-understanding-to-kill-more-pal
estinians/

/ / Dr. Condi was very smart when she declared
at the outset of the most brutal Israeli war on
Gaza that it was the Palestinian side which
is held responsible for violating the six
-month truce. \ \

She lies, Innocent Christians die.

Nazi argues it's good to get killed Jews by
breaking truces with prison camp.

They shoot Peoples indiscriminately telling US
that's how evil they are to argue it's Your
fault though.

This post was passed to near everyone in our Secret
Service defending Obama. Let US demand Justice for
the Victims of 911, by warranting for the arrest of
every Neocon Nazi Zionist pirate of OUR Jewish faith
for Public trial on LYING for War Crimes against
our dying Humanity. War Crimes against God.

A ZIONIST LIAR'S TRUCE

/ / live images of an Israeli helicopter hovering
above the city and dropping its white phosphorous
bombs on the city \ \

Again, the Zionist deserves to die by public trial
today to defend the Jewish faith. Look at usenet.
These demonic enemies go, 'yeah, Hamas broke the
truce', they do it to kill you. To steal the lives

of innocent Peoples to profit off our deaths as
victim.

Zionists are Satanic Demon Liars of Satan

FIGHTBACK

/ / Israeli forces demolished the house of the
Sammouni family in Gaza City after ordering
them to remain in it for safety. \ \

Palestinian Children found with bullets lodged in their head
http://jnoubiyeh.blogspot.com/2009/01/palestinian-children-found-with-bullets.html

/ / Israeli officials continued to deny on Saturday
that their soldiers had deliberately targeted
civilians, \ \

The Zionist is an
enemy to the God of Love and Justice, of Beauty, and
Children. A zionist LIES with a hatred unmatched in
Satanic hatred for the survival of our species. I
beg you, hunt to bill the zionist war criminal who
charges we will not succeed to see every last war
criminal on this planet hunted down to complete
extinction, by public trial, then Jewish firing
squads. The Zionist has bombed US, The People
indiscriminately with out cause. It was Nazi
Israeli that broke the truce to get killed
Jews for money. They starve Jews in Israel
to attract more charitable aid they can use
elsewhere. They, as Nazis, will continue to
murder Jews for money unless WE DEMAND, their
formal trials and public executions. They have
murdered our families, and they will pay will
their lives for it as the directly responsible,
and in no way, will escape our rages against
them as the enemies of every Human Being
Living for Freedom. Every Human that loves
children. They HAVE ADMITTED to targeting the school
girls for murder with lies they were caught
doing. THEY DON'T GIVE YOU EVIDENCE. And when we
get the facts, it's near always exactly the same
thing: they steal our Homes, they STEAL our
lives. God calls the Zionist Jew Enemy of
the Synagogue to Satan!!

"We also need a massive overhaul in Our news channel
prioritizing, including to add censorship free, open line
public communications. Done to gain value in learning from
the art of conversations. We need still to appreciate the
values of a free society where Justice is above all, the

measure of our success to communicate openly."

The Ungodly Murder of Innocent Men by Israeli Nazis
http://atheonews.blogspot.com/2009/01/summary-execution-in-southern-west-bank.html

/ / At noon an Israeli military jeep with four
soldiers entered Tameiziï¿½s land. After 15
minutes the man was thrown, blindfolded and
still handcuffed, into the back of the jeep. \ \

Let us not lose the focus of fact, that these
people of ourselves live in a concentration,
prison death camp, robbed of everything.
in Curfew near anywhere in "peace time". And
still, to this day, do Nazi Israeli CONTINUE
TO THIEVE the Homes of god loving folks in the
region, guilty of no crime but to have been
born into such brutal ungodly oppression
against Civilization. And to see, face no TV
opposition as American tax payers continuing
to fund such war crimes in our absent names,
is a crime on to ourselves if allowed to go
unchallenged. Johnny for Coast to Coast radio
host. Free the Slaves! Free the Slaves!

Binding U.S. law requires prosecutions for those who authorize torture
http://www.salon.com/opinion/greenwald/2009/01/18/prosecutions/index.html

The ugly secret of Barak and Livni, the truth about the Gaza rockets
http://www.youtube.com/watch?v=8rqDzXeA-PQ&feature=channel_page

[HEY WHAT THE.. THE LINK IS GONE ABOUT GODLESS
ZIONISTS MURDERING JEWS IN ISRAEL FOR MONEY!]

See my Jewish friends, these zionist liars
will never escape our love for Truth in this
our new age. Killing Jews for money is as
evil as found, negligently criminal, agreed?
Agreed.

Gaza: lives in ruins
http://www.youtube.com/watch?v=OFWxEtWcT8w

'Ungodly Enemies of Life is the only way
to describe it from here Tom. They again,
are attacking People indiscriminately for
murder as sadistic Satanic enemies of God'

Someone should ask what King Johnny, The
King of the Jews has to say on this subject
of a Zionist's complete absence of morality,
as inhumanly bereft any common decency among

our brothers and sisters. I mean for Christ's sake Tom, THEY ADMIT to sadistically targeting our children for MURDER - as some kinda Satanic demon whore to Pure Evil - aka. Wanted War Criminals for Public Trial. Just as the Nazis were for similar outrages. Let's hope men of America are least half they were then, but we are suspecting, they will as of usual, balk as cowardly slaves to the private banker man ruling their minds, it's a, no wonder. Where is there that purpose striving for a greater future living in a just society? Where is the Christ in their Christianity? to financially support the arming of such unlawful Zionist killings in silence against Innocent Christians?

Free Radio International Broadcasts Alive!

Johnny Justice for Coast to Coast radio host.

BBC argues with Israeli Spokesman over UN School Bombing
http://www.youtube.com/watch?v=VPGP1xWEkkk

Where is the evidence to form any person's verdict, if none is offered as in respect for yourself as worthy the title of free men? I ask as your self? Or are you as the cowards of most in the American military who refuse to speak for the arrest of those who did US wrong on 911.?

King vs Obama on Gaza - Christian vs Zionist
http://www.youtube.com/watch?v=oegClx-t20U

-

For the Popular Will?

Alex Thomson shuts-up Israeli spokesman!
http://uk.youtube.com/watch?v=zIQZ1-RFq6A

Wow. The demon LIAR will also say Hammas broke the truce, and Israeli started this by stealing innocent peoples homes, then imprisoning ourselves, the victims, in a death camp for indiscriminate slaughter. While they continue to STEAL OUR CHARITY by breaking truces. What is it that YOU can't picture?

"The view from the other side, that the Qassams are a retaliation for the siege that starves the one and a half million inhabitants of the Gaza

Strip, [a prison death camp,] was not mentioned
at all."

Masada legend galvanises Israel
http://news.bbc.co.uk/2/hi/middle_east/7830416.stm

/ / they committed collective suicide - men killing
their own families, afterwards each other, until
one [evil zionist liar] remained to kill himself. \ \

ISRAELI IS A THIEF WHO CAN'T SPEAK OPENLY IN
DEFENSE OF OURSELVES IN OTHER WORDS? That is
right. They, as documented criminal, lose
every debate personally since before the dawn of
Civilization because their position is clearly
unsound. They are criminals who murder People
in hate for a freed Humanity. They OFFICIALLY
steal Peoples homes in that country didn't you
know they proudly proclaim it so? And steal
humanitarian aid from starving children.
Targeted to murder children specifically as
publicly confessed, 'it is Hamas WE blame',
not them as demonic child murderers. Hideously
evil as ungodly sadistic savages. Enemies of
YOU, enemies of them, and enemies of me, the
King of Jews Christ fellow from beyond the
grave. They are so evil to God and Man,
they tarnish everyone of US to not win justice
sooner by blaming the actual bad guys. Justice
is Freedom.

/ / Those white phosphorus shells used on the
Gazans are made in the USA according to Jane's
Defense. \ \

Again, these peoples are not Jews. Being
Jewish is a religion. These thieves of God
are Satanic in their LIES to betray the
common trust in our words, that bind all
worlds to victory, called freedom universal.
Even tales of the Devil have him keep his word,
with verses specifically condemning the self
to damnation for targeting the innocent for
death. God's the Word. Every word inside a
fool's paradise. Including the periods. Not as
like, I'm playing a word game, but that it in
wonder, is all strangely here. Example: The
Universe as it has existed always, is not
separate from our 'pauses', or faulty drawn
conclusions. The universe, in one sense, was
as good as anytime, created 6000 years ago.
AS TOO 50 billion. You say, impossible, I

say no, study quantum physics, and know, I
live this.. our existence is not scientifically
separate from the timeless nature of
consciousness, proven as not only theoretical,
but actual. That is a first step at developing
a REAL relationship with the living Universe
if you want to as like an artist does - that
TOO! can be just as thought static in it's
orderly constructions for Atheists. (An
Atheist is still mostly a fool here however.)
Overall, for any, it's sorta simple: Life has
left YOU in charge of YOUR fate. Now, do well
to make something of this being as eternal Life
reaching for balance, as your body does, and
good cops do when bringing the bushmobsters to
Justice. By Israeli calling for more murder
against the innocent of your mind as racists
and bigots they are openly, is still shadows
of YOUR mind, YOUR WORLD.. get it, got it? God
is in genius to set Life as this, as like,
nowhere existing, but for as yourself within.
Will you speak out for the Justice denied
Humanity?, or not you? Atheists can be Just
too!, but generally lose it on not
understanding the intelligence of order is
way beyond what they dream up with
assumptions. All anyone has to do is ask
themselves, who do you mean "God"? Atheists
are ridiculous!, but, to each his or her
own, we are on a path here, believe what
you want to believe. This is not a faith
initiative I'm bringing by keeping this real,
I DEMAND JUSTICE BY OUR WILL BE DONE.

A zionist cabal of criminal pirates who murder
Jews around the world for stolen money is
seriously evil as criminal. What do you think?
Let US have a open line discussion on this
indivisible matter of rights to all as equals
before who ever we proclaim, I AM.

I mean you right? Say it with me... "I" "AM"
we are good to go.

-

George Galloway "The West has DOUBLE STANDARDS when it comes to
Israel"
http://www.youtube.com/watch?v=IIpvrOJQ0J0&eurl=http://whatreallyhappened.com/

ï¿½Main actions: Israel targets hospitals, United
Nations premises, Press offices, theaters and densely

populated buildings in west of Gaza. Additionally,
people are being used as human shieldsï¿½

A Zionist Nazi Being

See? A zionist Nazi argues it's good to get killed
Jews by breaking truces with a prison death camp,
cause look at all the free American Welfare money
we can steal through kicking-back AIPAC members in
Congress.

-

Harper complicit in Israeli war crimes
http://onlinejournal.com/artman/publish/article_4246.shtml

Canadians! Please war with words for open line
calls on the war crime enemy propagandist,
The Chorus Radio Network. CJOB STEALS millions
from Manitoba each year, and refuses all calls
for honesty in governing. They are actual
CRIMINALS.

Canadians Stand Alone
http://www.thestar.com/article/569872

Harper the proven war criminal
who will be going to prison, is the only person
on Earth that has publicly okayed Israeli Nazi
to target murder Christian school girls. Canada,
join me in demanding Harper's Public trial as a
war criminal. Prison for Harper who took a
honorable soldier who stated he refused to commit
war crimes against innocent civilians, and placed
him without trial in prison. Without warrant for
arrest. Harper, the Nazi Appeaser, is a War
Criminal standing against the Queen.

"Or is this another, popular amerikan past time,
of, who cares for the facts, we are at war with
God and Christ now?" Die bushite die Christ always
says against lawless torturers as mass murdering
thieves of Humanity.

shreveport man gets 15 years for stealing $100.00
http://wesawthat.blogspot.com/2009/01/shreveport-man-gets-15-years-for.html

Again, Americans need to demand the arrest
of the Judge and prosecutor for being openly
evil demons, as TRUE enemies to freedom in
America. But guess what? Americans will refuse
to even phone Alex Jones, or George Noory
to be hung up on. Just refuse as brain dead

zombies - as known in this circle, McCainiacs.
Did you hear Alex's NWOer yesterday state he
doesn't want anyone to speak as Justice for
Americans because to learn even the most basic
of precepts for Justice, he can't pretend he is
a Freedom Fighter begging US for more money?
Like multi-millionaire Ron Paul, who gave the
fixed election up to take our money and walk
away. How much money in the millions do we have
to pay them at GCN, before they will acknowledge
the Iraq war is a war crime? THEY NEVER WILL,
because the faggot owner has a son who's into
raping American women as lawless enemy of Life.
Americans are indeed, selfish, like all the plane
crash survivors telling US how they couldn't care
less that Israeli nazis are openly targeting our
Christian children for murder with their tax
money, as unimportant, to how long they stood on
a plane wing, now approaching it's third day, of
wall to wall coverage. Telling us again of how
Christ saved your life as a lifeless degenerate.
I, as Christ, am really starting to hate all
Americans in total now. How difficult is it to
pick up their phones? They don't, and I'm beginning
to believe it's because, like GCN, they really
don't care for the future of our Humanity being
left for dead as continuing victims to EVIL liars.

Nazi Israel Broke Ceasefire as Satanic:
The Bush Administration and The New York Times v. Amnesty
International
http://uruknet.info/?p=m50870&hd=&size=1&l=e

UN sites shelled with WPh after GPS coordinates given

Livini was reported to say today that, 'every
innocent person targeted by Israeli, as such
driving in ANY car, or on ANY bike, or walking
down the street as then directly murdered, Hamas
will be blamed for. Heil Hitler' Well, I made
that last part up, but do you have the ears to hear
the screams for mercy given by Humanity?, while
this, the evilest of JEW KILLERS in the known
universe, (targeted, and murdered countless Jews
in Lebanon as one example), believes no man or
woman living can speak directly against her wanting
to MURDER even more as ungodly... 'Until the tin
can rockets stop falling on Jews' standing in their
detention centers, or living at the garbage dump
BUT.... THEY BROKE THE TRUCE! THEY BROKE THE TRUCE.
They will rob and kill US all my INNOCENT friends

as LIAR Satanic if you, YES YOU continue to refuse
to support my/our demands for OPEN COMMUNICATIONS
for Justice ourselves. Johnny Dazzler for Coast
to Coast Radio Host!

'Secretary General outraged at shelling of UN building in Gaza'

"I conveyed my strong protest"

Not good enough. Public War crime charges warranting
Death by Jewish firing squad, is what is demanded of
our Humanity. Death to the zionists liar war criminal
enemies of Humanity, instead of US, who they target
for mass murder.

Google have attacked US again as Evil doers..
They have again destroyed my writing with war
criminal intent to deny these truths as men they
could never face me, because they are not. They
STEAL our voices.

They are jewish criminals, not criminals because they are Jewish.

HERE IS WHAT GOOGLE IS:

"End the illegal Human occupation of Jewish land in Gaza!"
http://stoptheism.com/

HUMAN

These war criminals need to be arrested for Murdering
LIES against the lives of every innocent Christian
and Jew. Godless zionist nazi bastards are as evil
as they are dumb. Get every man who defends freedom
truly to hunt down these satanic demon ENEMIES for
thee True Jewish Cause, to ask it why it lies as an
enemy to HUMANITY, to murder innocent others as
evil doing thief to Freedom. A thief of Jews
everywhere to know truly God as Love and Justice.
Not only will Americans celebrate these neocon criminal's
freedom to call for the murder of innocent Christians,
as he does without arrest, "Americans" too, will as
Satanic refuse to hunt the ungodly enemy of the Jewish
faith down as Nazi hunters. No, Americans, cowardly, are
committed to dying with the Nazi Elite, as such
to escape of the Neocon terrorists who participated
in the mass murder of America for more stolen money
as war criminals.

THESE ARE SERIOUS WAR CRIMES

Israeli soldiers say they have OK to KILL Innocent People
http://www.mcclatchydc.com/251/story/59704.html

Israelis 'shot at fleeing Gazans'
http://news.bbc.co.uk/2/hi/middle_east/7828536.stm

They'll murder anyone human to steal our homes.

-

We battle injustice by demanding the public
arrest, and trial for execution of proven
war criminals. Now, who disagrees?

Israeli using Palestinian Kids as Human Shields
http://uk.youtube.com/watch?v=rXq57XK2L0A

Israeli Soldiers using Palestinians as Human Shields
http://uk.youtube.com/watch?v=FjEd4hJNVCE

Why do you as an American, refuse to contribute
to Just cause?

These monster enemies of Hillel are inhuman
to their prisoners, prisoners who had their
homes stolen and are denied freedom for being
born to Nazi tyranny. Demand Justice for
yourself as a Human.

Some Serious Evil Jarg in Dishonest Reporting
http://www.aish.com/jewlariousMultiMedia/jewlariousMultiMediaDefault/Israel_Unfair_and_Unb
alanced.asp

Forgetting about the truce given to those in
a concentration prison camp? Where they are denied
food and water? In curfew prior to near half the
days of the year, for years? How could they not
to claim such self righteousness? They don't bother
because they'd rather YOU were made innocent victim,
then them, Zionists who would screw you out of a house
called home. Did you know: they openly steal Peoples
homes in that criminal nazi state labeled godly?
Of whom openly thieve? Officially? Yes, and they try
to thieve the title of Jew from the Messiah too,
but I'm not going to a slave prison death camp
for innocent humans, I'm fighting back to demand
open communications to rule true Justice concerned.
Freedom is paramount. 911 perpetrators will be
brought to Justice by King of Jews Johnny Dazzler.

/ / And we may assume that he was a non-Jewish
member of the IDF, given [...] \ \

Lawless evil doing for neocon lying criminals
really sucks man. Our friends are dying murder
victims. They are robbing our humanity of common
decency.

Neocon Enemies of the Jew do not Care for Truth

ElBaradei says Iranï¿½s nuclear program is legal: report
http://www.tehrantimes.com/index_View.asp?code=184534

But Neocon enemies of the Jew do not care for Truth.
They lie as enemies to God, on hopes to murder Jews
like they did in Lebanon with millions of land mines.
What kind of "Human" would commit such crimes against
Life? Cheating Liars for Satan Johnny tells YOU.

When Bush asked about his errors in judgement:

/ / you know, could I have done something
differently, like land Air Force One
either in New Orleans or Baton Rouge. \ \

Would have been better PR he means? Likely.
He walks away looking good, your family is
dead, or dying due to criminal neglect for
cash profit. Did I tell you that the private
bankers don't even cover our loans yet?
Trillions given by Americans, now Obama is
asking for more to disappear. THEY DON'T
even tell US what they've done with the
eight trillion already taken. Desperately,
Life Begs, THINK ABOUT THAT. King Johnny
for Coast to Coast radio host.

/ / So what is Ron Paul saying about Ron Paul?
I'd wager, he doesn't know himself, and fears
like FOXNEWS from open debate \ \

Excellent! if I do say so myself.

-

The Queen Shall side with The Great Nation

You can not hand over a prisoner for the crime
of refusing to commit a war crime. Otherwise,
YOU'D be a war criminal like now Harper is.
A Zionist appeaser. The government of Canada
already decided on this issue, and the vote was
137 Patriot to 110 neoconned bushite dumfuk.
The Iraq War is a war crime. These be demons
that steal our democratic voices, by denying

freedom from a man who's capital offense, is
that he tried to be fair for all parties. See?
War criminals.

The Queen Shall side with The Great Nation of
Canada Vs. S. Harper on this. Ask her.

God Bless the Queen.

-

/ / destroying Hamas terror infrastructure \ \

As Satanic, they TARGET TO MURDER Christian
School girls, and claim, none on Earth will demand
their public trials for executions as War Crimes
against God, because to the Satanist LIAR, (and
many "American" "Christians") God doesn't exist
within YOU to demand Justice for our Times.
YOU change that.

Evil on Parade

43,000 FoxNews Zionists in America, sign petition
in YOUR INNOCENT BLOOD calling for censorship of
Gaza conflict across all America

http://www.iraq-war.ru/article/186735

Stressing that Israel was "the first to stand
up against pure evil." [See? A zionist Nazi argues
it's good to get killed Jews by breaking truces
with a prison death camp, cause look at all the
free American Welfare money we can steal through
kicking-back AIPAC members in Congress.]

"I demand that the use of images and headlines
that misrepresent current events to the detriment
of the State of Israel be stopped immediately,"
the petition went on. [and the 'judge' judges
anything detrimental misrepresents the constant
LYING nature of the Nazi Zionist thieving pirates
of the Jewish Faith?]

This is detrimental to Zionist war criminals
because it exposes their TRUE EVIL NATURE..

Israeli Forced to Admit in League with Satan
http://uk.youtube.com/watch?v=zfFMZ7Y-s_c

Israeli forced to admitting, it lied as a demon
enemy of Life about tin can rockets falling
into the head of a good Jew, prior to the
Neocon LIAR's ungodly criminal attack for

senseless war against Humanity in the region.
When Jews die, these Zionists really take
everything like bandits., Peace where smarter
People speak freely for Justice? not so good.

Breakdown Dead Ahead
http://www.youtube.com/watch?v=yFCnVC2C8As&feature=related

-

Simple Common Sense for Mankind

/ / Israel has admitted HAMAS kept the cease
fire; and that Israel broke it, then unleashed a
total starvation blockade on Gaza followed by
flaming death from the sky aimed at schools,
hospitals, ambulances, and children, and you
dare call the people opposed to such barbarity
a "mob?" \ \

Zionists are evil people who pretend they
are honest, when lying directly to everyone.
Blitzer reports Hammas broke the truce, he
is lying to continue the murder of innocent
peoples. Understand: Israeli Nazi state they
will continue to murder our innocent Humanity
until the rockets stop falling on Jews. Yet,
they broke the truce, and murder Jews routinely
with reckless abandon. Jews from the Bible as
of "nigger" Ethiopian, are what the Zionist
hate when warring GOD for apartheid, apartheid
that is Humanity in Gaza. A zionist is a war
criminal who speaks not against the neocon,
but against Innocent Humanity as YOUR enemy.

Livni: Gaza truce would give Hamas legitimacy

As they always do because they are dishonorable
murderous nazi thieves of God as Just cause is.
I am, and YOU are, you just maybe don't know it
yet, or if ever. A zionist serves Satan to escape
the neocon terrorists from their ungodly crimes
on 911.

http://desertpeace.wordpress.com/2009/01/12/gazatoon-of-the-day-blaming-the-victim/

Ron Paul:
US Will Be Rightly Blamed for Israeli Killings
http://www.youtube.com/watch?v=6C756NOPyDA

Not the Nazi Israeli?

The guilty party are those who advocate these
mass murderers of innocent peoples with
deliberate lies, like from Blitzer. Blitzer
will be tried, and executed a war criminal
for stating Hamas broke the truce., Where,
only two minutes earlier, he learned, that
it was his Nazi partners. DEATH SENTENCE.
It was on TV. BUT SEE? Ron Paul, the Libertarian,
ain't going to be honest here. He'll lie cheat
and steal Humanity's voice for Justice - like
he did with OUR money. A typical Libertarian
like Alex Jones who wants to blame "socialists",
"Liberals", aka, all of innocent America.
Blitzer is war criminal, who makes his own
discussions. As is Ron. What an enemy to not
mention the truce. THINK: IT IS THE ISSUE. But
Ron plays the dummy to kill more with contempt
for Freedom. Ron Paul, the bigot, asked,
'should we be doing this'? SEE? it's not first
degree mass murders, no, according to Ron Paul,
it's argumentative that indiscriminate mass
killing is a good thing really. Remember,
Ron Paul does not support arresting those
who committed mass murder on 911 either.
Or those who STOLE TRILLIONS. Or lawless Bush,
the ACTUAL AntiChrist enemy of God. Ron Paul
will watch America die for a stolen dollar.
And Alex Jones will refuse all calls to label
him good guy like himself warring order
to our universe for it.

Israel is [NOT?] responsible for these childrens death
http://uk.youtube.com/watch?v=Y9PIZQqIep4&feature=email

Ron Paul "When we pick sides, we make it worse"

He also took our millions donated for freedom
fighting away for his family, but not our own
as dying innocent victims giving. Pick a side.

Remember: Sadistic authoritarian George Noory
is a very real DEMON of Satan, who again,
openly tells US, he wants to murder our
species as the innocent forsaken, and Alex
Jones doesn't hear a problem with that
either. Love the bushite blindly, and
they'll kill US for a dollar sukka.

Alex Jones is like the retarded brother we
can't help but love because we're human. He
is still retarded. And George Noory is still
seriously evil as a traitor to the cause of
Freedom in America. And Ron Paul is still
slamming Ron Paul.

Ron Paul "Israel can not act without
Washington's approval"

So, it is Ron's fault then by not mentioning
the truce?, or as that, innocent People are being
indiscriminately murdered in a death camp that
he figures is argumentative? that innocent
People are dying as targeted for mass genocide?
Or is it the Ron who states YOU are to blame
instead of himself for being there, not saying
anything? HEY RON! Can you hear me now!

-

Contribute to our rise for the popular will

Alex Thomson shuts-up Israeli spokesman!
http://uk.youtube.com/watch?v=zIQZ1-RFq6A

Wow. The demon LIAR will also say Hammas broke
the truce, and Israeli started this by stealing
innocent peoples homes, then imprisoning
ourselves, the victims, in a death camp for
indiscriminate slaughter. While they STEAL OUR
CHARITY. What is it that YOU can't picture?

Hi. My name is King Johnny.

TALK IN AMERICA
http://www.mediafire.com/?mxw3nzi4nzf

-

/ / The targeting of civilians, whether
by Hamas or Israel, is a war crime. \ \

They are targeted by Obama who suggests
there is an argument to be made here. There
isn't. Nazi Israeli DEMON LIARS broke the
truce to kill Jews for money. They are godless
enemies of Humanity. So it isn't that we are
pro-Palestinian, it is that we are pro-Human.
Zionists DESERVE to die, before US, the innocent,
they target for murder for stolen cash gain.
Like Obama has promised to do for AIPAC. But
what about the rest of US 6 billion plus Obama?
Who is it of US innocent folks do you wish to
MURDER, or torture next as a Zionist war criminal

for Satan Obama? Torturing kids is popular in
Israel, tell US Obama, which American father will
have his children tortured, or murdered
sadistically by yourself as a whore for Nazi
Israeli? tell us, we're not waiting.

The Chosen Bad Example

Zionists Destroy Our Homes as Satanic
http://www.youtube.com/watch?v=mo2HW4T7wK4&feature=related

When I see the women and her child, left outside
while they sadistically destroy her meager gains,
I grow weary with ourselves for not speaking right.
Nazi Israeli are committed to deny US our God given
rights as Innocent persons to speak freely for Justice
realized. All because they STEAL our Lives for monetary
gain. It is our reality, give it or take it, YOU LOSE.

Then.. Hammurabi founded Civilization.

I go concerned for any hesitations of condemnation by
Obama. It's like, he's talking some jive about
how now he'll NOT let the words of Hamas reach
his ears. Being against war criminals, doesn't make
you pro-Hamas, necessarily, it means your against
war crimes to defend the lives of ourselves respected.
Remember: He told US earlier during the campaign that
he wouldn't fear speaking to anyone, Hamas especially,
because he was confident he could win the discussion on
Liberty, by principles that unite all free men. Now,
he has promised the FBI's Most Wanted AIPAC, he will
pretend to not hear any calls for fairness as all
parties united by common cause. Johnny Who? Where did
you go Obama? You were here, then.. pooof! you
vanished into the loving shackles of convicted/ing
criminals is a mass, "WE ARE TRAITORS TO JUST CAUSE"
organized war crime outfit, dedicated to deceiving the
Public by lying. I am not Lying. I'm not saying I hold
his associations as a measure of himself, I am concerned
with him stating, he will not hear our cries for Justice,
as then AIPAC cheered. I was as freaked out about it as
you maybe yourself now, believing it as possible. Check it
out for yourself, and wonder, just "who" is this person
they tell us they're are going to take for as dying fools?
I mean look at what happened to what's his name, when he
sided similarly the same in error as hugely criminal? Come
on be honest with us son, "Are you on drugs?". Maybe he's
just been stressed with all of everything he is heaped
to follow on, NOT to know by Blitzer, that Israeli broke
the truce to kill more Jews for money, and, also STEAL
innocent Peoples Homes while saying, "they are God's

Chosen". Yeah, chosen for, "The Bad Example", of how
Jews are left undefended by these grave robbing war
criminal nazi forces. As the King of Jews, I call for
Public War Crimes trials of the entire bushmob as
terrorists, and their supporters for lawless tyranny.

People are Coming to Town. Justice for All Coast
to Coast radio broadcasts all, until we have secured
the neocons in a prison cell awaiting the treason trials.

We are Good to Go. Rise Up for innocent Life,
or don't and see where it'll get you in the end.

TALK IN AMERICA
http://www.mediafire.com/?mxw3nzi4nzf

Nazi Israeli STEAL Peoples Homes without
apology, as a function of their SATANIC
government, while collectively bombing the
INNOCENT victims who die because of it.

Gaza 2009 - Operation Cast Lead
http://www.youtube.com/watch?v=hFEiOfLUfzY

Again, they are Satanic here because
they THREAT to tell you, yeah, Zionists
are casting the leads for the real mass
murder scenes - Justice denied Humanity.
God doesn't exist to defend yourselves
from war criminals for Satan.

War crimes trials with public executions
will commence against ever GUILTY zionist
living to lie that Hamas broke the truce,
that Georgia was attacked without provocation,
(again, CNN are not 'accidentally' conning
US here). And trials for every last living
bushite bomber, rapist, and torturer -
death to the bushite, the true traitors who
war against freedom for America, traitors who
war Innocent Humanity for the escape of the
neocon zionists.

-

Both parties cheerlead loudly for Israel's war Against Humanity
http://www.salon.com/opinion/greenwald/2009/01/08/israel/index.html

Death sentences MUST be willed by Christians for war crimes.
Death to the bushite, death to the enemies of God and Man.

-

For the Great Truths. We Stand United

/ / This option is also regarded
as a non-runner as the US would certainly veto that
suggestion. \ \

No no no no. What you do is investigate who this
the "US" person is as the GUILTY party my friends.
The facts have spoken for ourselves without contention.
And while we're at it, try to figure who that "Army
says.." person is too, we need to know who these
traitors are who hide their names backing war crimes
to continue. The Enemies of Civility, they are
enemies of US all my innocent friends, enemies of US
all.

white phosphorus shells on Gaza
http://www.youtube.com/watch?v=HPY2M6IxDRA&feature=related
listen to the inflection of voice near the end of this..
the mind of a delinquent 7 or 8 year old.. This phenomenon
is pervasive, and illustrates some cognizant short coming in
Calcium or Zinc somethings. However, IT IS THERE. Normally, as
an Expert on Psychiatry, I dismiss the whole notion of
Psychiatry as I intimately know it as pure bunk wacky,
however the study of something here is needed if we're
ever going to convince ourselves dying indiscriminately
this way sucks. As the innocent for profit we pay for,
with lies sold without Public defense of mass murdering
demon traitors to the cause of US falling victims. God
says their Satanic, I just say they are criminals. War
criminals easily convicted for murdering our loved families.
They have no remorse for all that have been murdered
already.. Livini should be on her knees begging our
forgiveness, but she's not because she couldn't care
less for any Jews, especially those she don't have
imprisoned under threat in Israeli 'society'.

It's a 'bad' thing. nnNo.

Israel bomb attack Gaza Civils Palestinians 27/12/2008 launches
missile attacks on 27 Dec 08
http://www.youtube.com/watch?v=tQLDBujnwEE&feature=related

This was what Israeli did as a legitimate murder
scene, committed after the Nazi Israeli Jew HATERS
broke the truce. More dead Jews, more money to be
rich with. and we'll blame it on that God nonsense.
We must demand war crimes trials from Obama, and
everyone else down there who is appalled at this
indiscriminate mass murder continuing in your name.
We need arrests of Zionist infiltrators within
the American military who have been shipping
weapons to nazi Israeli to murder more defenseless
innocent People as targeted. Obama must demand
death sentences against these ungodly Zionist

vermins for treason, warranting execution for the
war crimes of accessory to mass murder, or genocide.
For the Great Truths. We Stand United.

-

Here on a Mission

/ / after dropping leaflets warning residents it was
about to "escalate" its offensive against Hamas. \ \

SEE! This is AFTER fire bombing the whole community.
Satanic evil enemies of Life. Who admit to targeting
any one who has ever so much as swept our streets,
warranting bombs dropped on their Block(s). SEE! they
are ENEMIES OF EVERYONE. EVERY LAST ONE OF US.
INCLUDING GOD.

Riddle me Dumb

Hamas Workers and/or Troops? Out hiding in the mountains
of Afghanistan you mean right? Satanic enemies of all
Humanity I tell you. The most evil nazi sons-of-bitches
who openly advocate tyranny and oppression through mass
murder of ourselves as the innocent left targeted
defenseless. Enemies of Jews everywhere, the Zionist
cares not for facts on who's Life it destroys for stolen
gain by lying. That's why they target Jews, for fear the
Light of Truth would expose them as the Nazis they are.
It's a prison death camp, brought about by Israeli STEALING
OUR Homes as ungodly thieves. Thieves who leave a Jew
to starve to death in a garbage dump because, it'll
attract more charitable aid The Zionist can use
elsewhere. It's not a Jewish thing, it's a criminal
matter. They STEAL innocent Peoples Homes in that
country. God's Country? God would will such criminal
offense? Which God? Not the God of Abraham, nor by
the teachings of Hillel, Christ, Mohammad, or
Confusion? So which absent God do you speak where WE
can't speak as ourselves openly for Just Cause?
Cat got your tongue? How come your not saying anything?
The Israeli Zionist ENEMY wants US ALL in slave
labor prison death camps silenced away that's why!

Israeli War Crimes
http://bothwell.typepad.com/whos_your_nanny/2009/01/israeli-war-crimes.html

Well, maybe I'm wronger on Ron Paul than I needed to.
Hey, don't you EVER forget, I am a man also. We need
to meet on common grounds, to demand the start of
formal arrests for the bushmob crimes of 911, Iraq,
Afghanistan, South Osettia, and Palestine, as a group
together united by agreement for this one cause, and

then... we can later argue about how your ideas are
better than mine because I actually know of which
your speaking.. Hey! you could call me Daddio if you
wanted! To the telephones we go.

-

Israeli are attacking prisoners held criminally
in their own Death Camps!! GET ALEX JONES ON THIS!

Hmm... why wouldn't Alex? to support his fictions
over Our Rights to Live Free perhaps? A Hero adapting
to the deaths scene?, or, a Bush whore committed to
enslaving Humanity, all so he can say, he told US so.
Big hero or big hero. Your NOT powerless to his vision
of complete control over information. He refuses 911
info, Iraq war info, Israeli info. All so he doesn't
have to look the fool, while Humanity dies with his
insults against our wills to make something better
of ourselves. Justice is what I will. Masturbate on
your own time Mr. Alex Jones.

If he states again about how he knows everything,
and is always right, and those that criticize
him on ANYTHING are delusional, it's going about to
make everyone further sick with this obscene take on
what life means as Alex takes it. If I truly state
two nickels make a dime, does that mean therefor
they make a quarter also? If I say so like Alex
would? He is an idiot. Truly. George Noory figures
Hamas broke the truce, and that the Mideast solution
is that Jews should be separated with special rights,
as oppressors over the freedom of every Palestinian
Prisoner, and what's Alex Jones gonna say about
his 'truth telling freedom fighter' George to actual
'lame ass evil nazi traitor' George?, to YOU about
how George is just trying to murder millions of
helpless people as an offer for the final solution?
We can expect Alex now to claim, Zionists should
have special rights over Jews, all to maintain
his FICTIONS on Noory being anything but the
monster to Humanity he is. Just because Noory
doesn't growl when talking about murdering all
children in around the age of 15, or against
soldiers who refuse criminal orders, does still
make him a true fascist nazi enemy laughing at
your murderers escaping to live freedom in
our dying forsaken worlds. The bushmob doctored
the NIE. Conned Congress, and Soldiers. Did 911,
by closing criminal FBI investigations immediately.
Alex and George don't seem to want US to know

these FACTS that demands arrests of the culprits responsible for high treason against Johnny's America. Now, who's with yourself. I am! I am! I am!

Alex Jones doesn't know squat of Social Security, but pretends he does, like Ron Paul does when speaking of the Federal Reserve, Health Care, IMF, World Bank blahblahblah.. I mean even the expert of experts Alex has on near twice a week, EVERY WEEK, to talk all about how the Illuminati are doing everything,(give me your money now for whatever), DOESN'T SAY TO KNOW, it was Chris Cox who changed Investment Banker rules, to cover instead one tenth of WORLD INCOME loans, to one twentieth. MORE THAN DOUBLING THE ENTIRE GLOBAL MARKET FOR LOOTING WITH HIS SIGNATURE! (And. that isn't even a fifth of the TRUE trillions dollar fraud story.!) Now, granted, I wouldn't expect one tenth of one percent of America to have even a distant clue of which I am speaking, but importantly, Alex's expert of experts has never mentioned it. EVER. Why? He don't give a fuck, but how much money he can get you to give him for investing in things that are un-important to our struggles, but for the fact, he states, you'll get free money for nothing!! OUR ACTUAL PROBLEM. It reminds me of those Ron Paul dollars... where Ron'll fix everything, cause we, as a private company, are going to make YOUR money instead... holy fuk mon.. Talk about the kettle calling American racists. Thank God the FBI stepped in. (The answer unfortunately is not nowhere as easy as Alex would blindly lead you) - again, so I guess it will be, Americans were just too far gone as illiterate chauvinists, who cared too little for your freedom as themselves degenerating. Why? To battle tyranny they knew not Justice wins the day, and blamed innocent groups gathered wherever, instead of following the crime scene leads at the real murder scenes - like was once done on TV and at the Movies. But even that was too far above their doped down heads, to raise their finger to dial a phone number.

How about stating "A lawless bushite enemy wars America as a traitor, to escape the neocons from the crimes of 911."

Then Alex states the head of GCN is giving out gold at less than it's value as a special treat, every second or third week. Below wholesale. Now, really think this thru. Do you think Alex is trying to con you here? you bet. That is the Gold Racket. Diamonds are another thing - where I've personally seen, about a decade ago, a huge press that makes Diamonds

out of coal. Swear to God it's true. Costs to make diamonds are pennies to the thousands paid to Zionists who live in Israel calling for the murder of all innocent Peoples. Where is the rich Zionist, grave robbing Jew hater to demand Justice for our times? Where? Pressing coal into diamonds, while advocating the murder of our entire Human species. THEY WANT TO KILL GOD AS SATANIC ENEMIES OF LIFE. While I am last known to Life's enemies as Jesus Christ, the Zionist's end every time. I'll have brought more Zionists to their rightful dooms, than any other, of any time, anywhere. I HATE Zionist bushite LIARS to death, all because I Love Humanity too much, to watch US die undefended as the innocent forsaken. They can change their evil ways, but till now, often not, benefiting off our suffering as war criminals who simply lie as demons to steal our Human values. Let's change this for our betterments. I mean the Halo is a dead give away..

The head of GCN has a son warring God to rape American women as lawless enemy in Iraq for the Neocon - again NEVER mentioned as something worth fighting against for Freedom in America - soldiers are suppose to REFUSE criminal orders - but not when Alex is at the mike. He will never mention the Bushmob doctoring the NIE to con America for death as exampled, because it doesn't fit his fictions, where all the bad guys escape because they are geniuses headed by secrets so powerful, nobody can ever know'em, except Alex. He tells us near every day, he knows everything already, and is never wrong, therefore you can't criticize him. Bullshit. It's like he wants to be wise like Johnny Gawd is, without doing anything like studying for a test where the teacher actually does know the issues. He told US today, the British came up with concentration camps, from the Indians - who spent all their lives murdering themselves. The British 'invented' false imprisonment? The British came up with the, Jews Killed Jesus? The British invented Pope Gregory VII? I suppose Alex has never heard of Ghettos. SEE? he just pulls shit out of his ass, and calls it like it's truly pure gold you'd wanna buy. Those, like your typical American have no clues, so they figure, Life must be sorta so that History is all one big Alex Jones NWO cartoon. What? that the NWO did 911, and everything else that use to instead, require criminal investigations to nab the actual evil doers? Alex Jones IS the NWO he tells US all we should be concerned about never stopping,

like it was in the DARK AGES. Justice Alex, why is
that hard for you as a "Conservative" to figure? Is
it because you are cowardly in the face of true
Liberty? Afraid that some People, on some Issues,
ACTUALLY know a great deal better than you could
even imagine presently? Don't like that do you?, where
you don't rule this Universe as a lawless tyrant
desperate to live in an illusion at the expense of
everyone else dying victims to censorship? Does he try
to find wise men or women? rarely. "Ron Paul [MUST]
leads our truth movement" - like, fuck off already
with the Ron Paul, The Truther, Bullshit Alex Jones.
1% is what YOU get on Social Security deposits - 1%.
And.. Bush stole 700 billion. 700. Billion. That's 700
BILLION. It's a "Trust" account. A "Trust" Account. It's
being held in "Trust" Alex. Ron Paul is asleep at the
wheel. As, so are the rest of all you other fools..
I want Justice, and I want it now for all the victims
of 911. Americans be damned, we want Justice, and We
want it Now.

In Texas, child rapists are given the right to
freely move about without fear that Texans will stand
as armed Men in defense of their very own offspring.
And Alex wants this for the rest of America. That some
how to own a gun, means an American would kill a cop
who beat a women near to death for pleasures that
he could never be Publicly arrested for, as a
sadistically evil nazi bushite fuck. Look, if YOU DID
kill that particular DEMON COP after the Chief
refused to arrest him, you couldn't possibly go to
jail in Johnny's America, because the truth would win
out in a fair verdict. And REAL cops would honor you
with great big, thank you. Nothing worse than a
cop (or bushite grunter) who believes the Law doesn't
apply to him while he drives drunk, tazers someone for
nothing, abuses Women, or kids, to sell drugs, or
kills good cops, who are good men. (Like mercs do in
Iraq officially for Rumsfeld's P2OG. Coming to an
American city near you!)

Again, the two Laws of Johnny:

1. No evidence, person innocent.

2. Torture? fuk you and die then

"Rice says it is 'hard' for Israel to spare civilians in Gaza"

We KNOW they are ONLY targeting innocent People,
the ungodly zionist Satanic enemies say so..

"Israel Rejected Hamas Cease-Fire Offer in December"

Livni has declared her country "is not going to show restraint"

"Her" country?

It's like she's admitting here, that they DO NOT
target the IDF's Hamas, but only our innocent lives
as a threat to LIFE and GOD. Remember: the Zionist
LIARS broke the truce.

THIS NAZI ZIONIST FUCK BREATHES THE AIR OF US
http://www.youtube.com/watch?v=lMxfEsooM5M&NR=1

/ / So, Hamas decides it's time to end the
cease fire and has begun shelling Israel again. \ \

This guy even sounds like the Satanic false
accusing enemy of God he is. Let US, as Humanity,
hunt these real devils down, try them, and have
them executed publicly for the benefit of God and
Man. Understand: this REAL DEMON knows he's lying,
no living man on Earth could spew the vile lies he
does to excuse indiscriminate mass murder, or starvation,
as this Zionist enemy of life sells to STEAL Your
HOME, your Family, YOUR LIFE. An open enemy of God
trying to STEAL the Title of Jew from Christ. EVIL
ENEMY OF LIFE. See, when a bushite dies, you served
Life well in defending their next INNOCENT target.
BILL HIM FOR STATING ISRAEL WAS STRUCK THOUSANDS OF
TIMES. BILL HIM FOR STATING HAMAS BROKE THE TRUCE.
BILL HIM FOR STATING bin Laden DID 911. BILL ANY
Zionist FOR THIS TREASONOUS LIE. Why God asks? Because
there isn't any evidence to support that Satanic lie.
According to the FBI. And according to God, Zionists
are not Jews, but of Satan as enemies of every life
form in this Galaxy, Hunt him down, and bill him
today for the love of God. You can 'hear' it in his
voice.. how he lies TO YOU as a DEMON of a Hatred
for Truth and Humanity. Facts, that are easily
available, are not what he works to mislead others,
others he hates, and wishes to murder for as ungodly
sadistic pleasures as YOUR enemy. Bill him under
American law for being pro-torture too while we're
at it. Death to bushite, death to the murdering
enemies of God's Love for Mankind, and enemies of
TRUE Justice for Americans. The fuking demon enemy
lies to you, as a con to STEAL your life, or just
as soon, the life of another innocent other. Now,
what are you going to do about it? Except his lies
as exceptable, as he tries his hardest blatantly
LYING to kill God and Justice in our Worlds? Not
in mine, but perhaps Yours.

' In Civil-Contempt Cases, Jail Time Can
Stretch On for Years for Americans, without Ever
seeing a day in Court. '

Where are the arrests?, then firing squads for
the Judges who 'judged' such criminality against
freedom for US, the Peoples in America?

' Where Did Taxpayer Money Go? Panel Slams Treasury
[FOR STILL REFUSING TO SAY] '

Where are the arrests?, they stole eight trillion
and counting.. And Congress 'slams' them for
disappearing OUR MONEY. Slams with what?, a,
don't do that again please butt sqeeze? It should
be massive slammer time, with a return of all
STOLEN monies.

' THEREFORE, those pro-Israel politicians in Congress
won their seats in part using stolen money. '

Where are the arrests? Amerikan bushite nazi grunts
are assisting in the mass murder of innocent Christians
in Palestine. War crimes demanding death sentences. It
isn't an argument that can be turned around. Nazi Israeli
STEAL Peoples Homes without apology, as a function of
their SATANIC government, while colectively bombing the
INNOCENT victims who die because of it. It's a prison
camp! they are denied water, food, shelter.. since four
or five truces over that they've broken, every one. These
are Satanic enemies, willing War Crimes against God,
a God NOT loved by zionist American Nazis. And a Son
as powerful as the four winds, ridiculed by Zionists,
and American know nothings, for the continued debasement
of YOUR soul worth here dying.

Israel Attacks Iran News Station

Why does not Iran DEMAND arrests, and death sentences
for these blatant war crimes against Humanity committed
by Amerikan Nazi Israeli Zionists? Along with the
perpetrators of 911? WHYWHYWHYWHY. Russians! Can you
help US out?

-

THE NAZIS SHELLED THE HOUSE WHERE THEY HELD
INNOCENT CHRISTIAN PRISONERS
http://uruknet.info/?p=m50596&hd=&size=1&l=e

Rise up for Justice American Christian, or
die innocent victim the Son of God does say.

-

Pictures of Alex Jones masturbating
"we were right about it all."

It's the NWO! The Illuminati! Not Bush, Cheney, Neocons Gone Wild, or any of many other REAL criminals, for the war criminals are just puppets to his EVIL fictions. Forget about Bush escaping.. Socialists who design traffic lights, and Liberals who will to share fairly are Alex's enemy, because he's fearful the FACTS would escape his denouncements against truth tellers. George Noory, one of the most despicable individuals on the face of our great Earth - is exactly the kinda guy he wants returned to send his wannabe Patriots nowhere but to die. What about Justice America? The bushmob doctored the NIE. TREASON. There is video of iron flowing like water from the towers, seconds prior to the collapse. Alex ain't there to help US, for that is where TRUE Patriots fight for real Justice. When WE phone with indisputable facts, on Ron Paul the bush whore sell-out for example, he lies to all (GOD), then hangs up on US. Is that the kinda freedom you think the Founding Fathers had in mind to give Your rights to speak for Alex who blames anyone but the criminals directly responsible for your funeral? The private banker never covers our loans, so why give them trillions without questions offered without answered as, never mentioned by the guy who is 'right all along on everything under the sun', and.. he 'rules the Ocean of truth' too don't you know YOU have a steak going all rotten to hell here also? You'd think Alex would take our call just for the challenge on where we stand? I'm free!

He is not. And George Noory tells us openly, he's into killing innocent kids for profit. George's profit is that apparently, by murdering all children in around the age of 15, will stop them from getting a clue at anytime in the future, to take him out as an ENEMY of EVERYONE for censoring our cries for Justice. Why is it that Alex would invite obstructionist, Steve Quail, or Alan Watt, on to lead you nowhere while they jerk off, but where we gotta go to actually defend ourselves? Steve has been on with Noory more than a hundred times, and, we'd figure, Alex will soon be delving into the Alien questions also. Answerable by me in seconds, but ahhh.. like Noory, doesn't want the truth of such a subject uttered,

just endless streams of illiterate bushite dumfuk
losers sucking on each other. While they wrest
from US the wonder; just why we can't stop
criminals from robbing ourselves, while murdering
our families? Alex wants to blame the unstoppable
NWO, while I, want to blame those actually
responsible, like Bush and the proven treasonous,
Neocon terorist liars who are pro-torture.
With arrest warrants. All of them. I'll do it for
Reagan's, War Crimes Act, as an act of respect
for my Great America, that's isn't always been
dying dead wrong under the leaderships of
criminals.

Israel hits Gaza after UN truce resolution

/ / AP Israel and Hamas responded to a UN peace
demand by hammering away at each other with bombs \ \

The IDF's Hamas is hammering away with what at who?
Is the AP referring to the tin can rockets that
travel usually several miles, but in one case,
22 miles? To kill a Jew standing outside in his
yard, thinking on how he would defeat true evil in
his time? Tin can rockets that contain no explosive
charge? Have no mistake, if it hits you in the head,
your dead, but really, what do you think the odds
are on that? E=mcï¿½. Or is this another, amerikan
past time, of, who cares for the facts, we are at
war with God and Christ now? Joe is an American Zionist
"Plumber", who has amassed a multi-million dollar
fortune in the competitive industry by shit eating.
Every bushite death is a mercy given to God in defense
of all that is right and Just in this Universe. A
lawless bushite enemy wars America as a traitor to
escape the neocons from the crimes of 911.

1. The ISI's General, Mahmoud Ahmad funded 911's Atta

2. We have video of iron flowing like water from the towers

Traitors to the Cause

Bush and Cheney are traitors to the cause of
American Liberty. To leave them free, is to leave
America un-guarded from further transgression.

UN: Israel Admits Claims About Attacked School Baseless

US military re-supplying Israel with ammunition through Greece

House and Senate Compete To See Who Can be Most Pro-Israel

This warrants the Death Sentence to Republicans
who have committed America to these war crimes
- DEATH SENTENCES. Christ DEMANDS these trials
to start tonight on America's Coast to Coast
radio program. It's called first degree mass
murder.

Israel broke the truce on Nov. 4th, yet state they
will continue to murder Humanity indiscriminately
until a truce can be found that they will break,
as always, Being the Satanic enemies of God and Man
according to the Bible:

The Bible "I know the blasphemy of them which say
they are Jews, and are not, but are the synagogue of
Satan."

/ / UN Call for investigation into shelling of
Civilian shelter \ \

Investigate that evil does exist in the thieving
LIAR name of godless Zionism? The enemies of God
and Jews everywhere?

-

Freedom Granted by Americans for Neocon Liberators

"Americans are having their heads velcroed to chairs
and forced to take in nutritional supplements by a
tube forcibly inserted through their noses by US guards."

These are People not charged with any criminal
offense don't forget. Die bushite die you know is
what I recommend, as does Reagan. A dead bushite
means you've saved the life of their next victim,
an Innocent Human Being guilty of no crimes. The
war criminal enemy is the bushite, the Zionist,
the LIAR neocon traitor to Life as this Universe,
along with every dumfuk grunt who serves tyranny
for the bushmob at Guantanamo, Iraq, or Afghanistan.
It is a soldier's oath to obey lawful orders only,
but Cheney they don't take out with American Law -
how come? cowardly fascist nazi whores for Zionism's
evil as the ungodly that's why. Cowards dying for
the escape of the Neocons from the 911 scene as
reported publicly. - Vs. US. That's we whoever
you are.

Widespread Suffering and Death
http://www.youtube.com/watch?v=gVdee2iXSVk&feature=related

Notice no one shoots at the blimp fire bombing the
entire neighborhoods. And if it's phosphorous, that
smoke is already deadly toxic. That is why it warrants
the Death Sentence under International Law when used
against OUR Humanity, as the most evil of Nazi War
Crimes ever. The neoCON LIARS are the LIARS conning
you here on our TVs and Radio dramas, in where, they
don't want to openly take our public calls for real
Justice. Bush and Cheney are traitors to the cause of
American Liberty. To leave them free, is to leave
America un-guarded from further transgression. So,
them being "puppets" is even all the reason more to
insist in their capture for trial by Jury. A Public
Jury of our Peers. Now, who's in with You? You can
count me in. and I bet willed to action, we will find
others to be something of ourselves too.. Justice
and Liberty for All. Equal rights given is what true
freedom is as measured. Translated from the 'Alien'
dialectic to Amereeze jank vibe; where is the fucking
evidence here Neocon traitors who false accuse to lead
us off the straight and narrow? It leads to Bush,
Cheney, Rumsfeld, and Condi that's why I figure, you
figure, they figure, we figure, so... what are WE
going to do about this sacrificing for godless tyranny
further then as unrepresented?

Gaza Mosque Struck as Targeted by Israel Air Force 1 Jan. 2009
(Why so you may wonder they've had this string going
now where a secondary something, then there! that proves
something absolutely apparently, without the intellect
to fairly judge anything, particularly themselves honestly
as dishonorable thieves and murderers, targeting prisoners
held hostage to their own camps. Death camps. Nazis are
they.

Israel Attacks Jews,
Silence from Mainstream about Violation of Law
http://www.youtube.com/watch?v=K1kt8qi0M-M

They kill Jews for money. They bombed Jews in Lebanon
for money. They want to bomb the HUGE sacred Jewish
communities in Iran.. wonder why? Zionists are not
Jews, for Jews don't steal in God's good name. Nor
target innocent beings for stolen gains. A zionist is
a thief to life, and as such, needs to be formally
charged for their criminal offenses, given lawyers,
and upon a successful prosecution, rot in a prison
cell and/or pay restitutions. YES. why? so not another
innocent person must fall in their place as next
victim to a zionist's public commitment to lawless
tyranny for evil intentions.

Johnny for Coast to Coast Radio Host

-

Israel Phones 'Terrorists' Before they Bomb Homes
http://www.youtube.com/watch?v=K5wrwZlwAq8&feature=channel

Didn't the Nazis say something like, they weren't
there to take out Hamas directly? Well, after all,

it was founded by the Zionist IDF, so I guess that
must be why they target our children instead..

UN: "Israel knew they were bombing a school"
http://uk.youtube.com/watch?v=uWP0GU0wVSk

/ / The hospital, and other smaller hospitals and
clinics were previously shelled by the Israeli
warplanes and tanks, stressed Hassanein. He
also denied Israeli claims that medicine and
medical supplies had arrived to Gaza hospitals. \ \

The Zionist is a thief of Life as our enemy.

IDF VLOG UPDATE: IDF Hits Dozens of Hamas Terrorists
- Capt. Benjamin Rutland - 4 Jan. 2009
http://www.youtube.com/watch?v=q9Jt-pV5wuM&feature=related

This Zionist enemy of God speaks like a six year old.
"Hamas Terrorists", "4. Jan.", come on now, how evil
do you have to be to believe this ungodly demon sells
you righteousness. They STEAL our food. They are OUR
criminal enemies who torture innocent Peoples. A
godless criminal enemy who also steals Peoples Homes.
And drops millions of land mines to murder Jews
indiscriminately for decades. Commits war crime after
war crime against Humanity. Vile bile.

They killed our innocents, and unless we kill
theirs, they will go on killing ours.ï¿½

It is the crime of which they demand WE are outraged
against. Welcome to Humanity's suffering world due to
lacking communications skill. The term "they" are
referring to is YOU. Your innocent life Israeli
intend TO STEAL, TO MURDER, TO ROB YOU Your rights
here granted by God. These are ungodly acts of mass
murder, perpetrated by enemies of Life. They targeted
a UN Girl School for Christ's sakes. please fight back
by supporting my calls for open international dialog.
Justice must win our Freedoms back, for there is no
other lazy TV'ed ass, pop a pill to make it all go
away, plan 'b'. Look at me! I'm not crazhey! We can
handle this no prob.. I'm a perfect King for these
times of wonder and horror. equal rights are found
through open communications for a measured Justice
we do contain. Evil is the deceived disguised. And
i am a god... on a mission.. Ladies?

-

The Appropriate Response To Islamic Terror
http://revisionistreview.blogspot.com/2008/12/judaic-columnist-urges-kill-muslims.html

/ / an Orthodox Jewish Russian immigrant \ \

Let US never forget, the Zionists also would bomb
some locations, then later, drop the warnings
for the Jews to run for their lives. Didn't warn
them though if they get into a car or truck they would
be destroyed instantly by the Zionist flying the
America paid for Apache. I did a big show of shows
through that continued as, more 'un-resolved' crime
scenes perpetrated by the treasonous, neocon Zionist
terror merchants. It's like they think some dying
fools are going to keep going to save'em in the end
from ourselves as still suffering in Justice denied
as enslaving into ungodly tyranny eh? These Zionists
are not only the bad guys, but they're bad guys to
even the bad guys as there is no found honor among
murderous thieves. A Zionist will kill a Zionist for
a stolen nickel, as do bushites today. Hey! it's only
Your Life in the balance. Or are you one of those
who goes in America, it's okay, we're only murdering
innocent folks who don't live in Israel.

Doing what's right and just, or evil as dumb is
Your riddle. Get back to US on that.

We need People are Equals Power!

President and CEO of Shareware Earth Co.
King Johnny Wizard at your service me Lord.

-

/ / It is just unacceptable to apply two standards of
morality, one for Jews and another for non-Jews.
For if what Israel is doing in Gaza is right, as
Israel and her supporters maintain, then what the
Nazis did in Europe several decades ago must have
been right as well. And vice versa. \ \

The ungodly zionist enemies, are enemies of
God and Man. Don't think the NAZI Zionist like
Bolton doesn't know this, with his friends at
FoxNews.They WANT to rape, murder, and pillage
America all her freedoms for the bounties of
private banker frauds. The banker does not
ever cover our loans, we do. So, why give them
trillions of American worker waged dollars for
nothing?. THEY DON'T COVER LOANS. See? that is
what this war against God is all about. People
of Humanity just seem to truly hate a guy like
US as wise and Just. See, people hate US, because
they can't for their lives disagree with Facts.
Why won't YOU support these same rights and

champion our demands for open communications.
Johnny for Coast to Coast radio host.

US Again Stops UN Call for Gaza Truce

Who is this the "US" person?, and let's
put him to death with Bolton and Kalilazad
for the most serious of war crimes against
OUR Humanity. Remember, Bolton was NEVER
confirmed because, the Zionist could find
no man or woman to say a single kind thing
about him. FACT.

CNN: The Nazis Broke The Ceasefire!
http://www.youtube.com/watch?v=KntmpoRXFX4

Protest pictures from around the world (not on CNN)
http://www.rys2sense.com/anti-neocons/viewtopic.php?f=11&t=16496&start=0

Remember Israeli nazis to this day, insist as
DEMONIC LIARS, Hamas broke the truce - as Hamas
is responsible when they target school girls for
slaughter. They said the UN were secretly attacking
Jews, clearly a LIE as impossible to prove because
it didn't happen. But facts are the furthest thing
away from the godless false accuser Zionist con man
or demon witch LIAR like Livini. FoxNews calls the
demon witch a Jew! ANTISEMITES.

We can witness, Americans do not have the intellect
to understand what this means. See, LIAR Nazi Israeli
broke the truce to get killed Jews for money. A
regular fair for Nazi Israeli. Now, they state they
will continue to indiscriminately murder humanity
until the tin can rockets that travel miles stop
killing Jews who hate Zionists. But importantly,
it is Israel that wants Jews to die, so they can
make off as Satanic with our stolen values. Just
like the Bush family did with Hitler, that the
Nazi Nation has no probs working gun in hand to
wipe out Jews everywhere still to this day. Again,
Nazi Israeli MURDERED JEWS in Lebanon as targeted.
And leave Jews to starve to Death in Israel for
more charitable aid they can use elsewhere. Public
knowledge not disputed by any living soul on this
planet because, the Zionist government admits freely
to this. Israeli think being Satanic is worth it,
for all the money and lives they can steal as enemies
to Christ, Hillel, Mohammad, YOU, blahblahblah.

And, as demonic thieves, they steal homes from
innocent god loving folks. US. But see the McCainiac

HATES you as being a virtuous man or women, so they call for more indiscriminate carnage against Humanity, on failed hopes, that we as God are not going to come down to hunt them to the ends of this earth, try them, and have them executed for the war crimes of Torture, Rape, and mass murders committed for the neocons escape of 911.

Joe the Plumber to cover Gaza op

/ / Wurzelbacher says he'll spend 10 days covering the fighting and explaining why Israeli forces are mounting attacks against Hamas. \ \

Don't want an intellectual who might have a clue of what is transpiring with the forces of Satan, fuk, CNN'll likely hire him also. Don't you just hate this treasonous lying nazi demon? He has no journey man's license, never did, isn't a plumber, and doesn't have the millions of dollars he claimed he did to purchase a company that would have rolled over 250,000.00 a year for himself alone plumbing. Plumbers, as good as the job is, never generate that kind of money. Who cares though, right? A Nazi liar is what Zionist's want, and that is what America gets. TV'ed Americans couldn't care much less. Evil nazi McCainiac who's sworn existence, is to con teen soldiers for death to raise the fortunes on the un-elected Neocon bushmobsters now fancies himself a teacher on the struggles against evil. It's like that faggot at anotheruntoldstory.com, who's into murdering innocent Gays, while fucking his own brothers up the ass, who runs ads everyday at GCN, tells US now, all about how evil we all are for demanding Justice. How long do you think that'll run with the Alex Jones towners still raising no concerns? It's for the money as Ron Paul would say.. Again, it is to divide ourselves from true liberty, by demonizing the innocent on our radio and tv channels. Instead of Bush, Cheney, Rumsfeld, and Condi.

http://www.liveleak.com/view?i=ab0_1231290043

http://www.kuwaittimes.net/upload/img_pict/headline9637e7.jpg

Read of the bushite in my America who call this work of Satanic enemies, a good thing they support to war terrorism for the sadistically evil liars of the neocon. Then KNOW my friends, a bushite is the enemy of every living soul on this planet. Have no love for those in the Air Force, the enemies of Man who bomb our families without excuse, but to know, they hate

US as Christ to speak free for Humanity. That DEMON George Noory was so happy last night about all the good the bankers AND CHENEY are doing for their hatred they spoke of for all Russians. SEE? not to protect America, but to kill you with their true commitment to the demonization of innocent people, all to escape the neocon terrorists. I HATE George Noory more than anyone alive in America. He is so openly evil to ourselves, that only those who wished to lie to you, (like Alex Jones does about Ron Paul), would say otherwise as bushite dumfuk enemies. Cowards committed to escaping Bush and Cheney for treason against Freedom. They doctored the NIE on Iraq, highest of war criminality. Alex Jones has never mentioned it, but for MAYBE in passing. Hey because all the bad guys are just puppets to ignore over the elites, globalists, socialists, liberals, gays maybe, Blacks, Mexicans, and anybody else smarter than NWOer Alex. Ron Paul is a coward as rarely if never has a clue of which he is speaking on.

Israeli PM says to end offensive if Gaza ends rocket attacks

Sarkozy urges Syria to press Hamas for Gaza truce

How does the ungodly get away with this obscenity? Nobody can deny Nazi Israeli broke the truce, as they always have done as Satanic for the last 60 years. Killing Jews for money is popular with the Zionist Nazis don't you know us by now? FoxNews CONNED Americans for DEATH with the unmentioned, TREASONOUS doctoring of the NIE. To kill Americans for more neocon gains, which Alex Jones never mentions either. Do Americans even care enough to raise Humanity's call? Do they demand public executions of sadistic godless Zionist torturers? as the Standing Law of America - The War Crimes Act - brought to be by Reagan - DEMANDS by the Law of America? It is the Law after all, yet, CNN, CBC, and FoxNews calls the perpetrators of the most heinous evil against Mankind, heroes. America is
a nation of godless cowards willing to die murdering innocent Christians in Israel, all for the profits of the 'magical' zionistic private bankers. Bushite grunts are now supporting the indiscriminate carnage, serving as police services forbidding any of the prisoners in Gaza from fleeing the indiscriminate slaughter. Again, as Satanic, they don't arrest the "Suspects", for what could they truly charge them with?, no instead demand we die helpless murder victims by forbidding escape, as they did in Fallujah murdering more than three hundred thousand innocent

souls. Die bushite die screams to all men on Earth from the Son of God. Will you stand for YOUR life as truly worth something here? Like lawless enemies Policing your reality will bring you more happiness and prosperity with the great truth teller HAPPY George Noory? The demon who openly confesses the will to want to murder all children in around the age of 15? Too crazy for you to face such an enemy of huge demonic origin, so, go the cowardly way like Alex Jones as sell out slave instead, to cover the demon with endless praise on his treachery to not have our fight on everyday with open calls for understanding Justice is freedom. Instead of a constant stream of bushite dumfuk enemies of Living. This isn't complicated. Or it doesn't have to be.

Israeli nazis state they will murder humanity indiscriminately until rockets stop falling on their country. Yet, they broke the truce.

Alex Jones told US as a deceiver, he's been on Coast to Coast a hundred times. Not in these last eight years he hasn't. I demand Alex prove this, or be known by all far and wide a treasonous liar, trying to take US off the tracking of criminal action of his buddy, the demonic enemy LIAR George Noory. bin Laden didn't do 911, despite the facts that WE KNOW George Noory knows better of but LIES to con the American teen further for death at the profits of the un-elected bushmob. See Alex wants you to blame anyone but those directly involved in the crimes of 911, or Iraq, or those responsible for it's cover-up by Zionist propaganda. George Noory will have as invited guests whos only function there is to spread dis info as supporting more indiscriminate warfare for the escape of the neocon terrorists responsible for starting the illegal wars to begin US at. Or those whom often support torture, a war crime that only exists as irrationally held by those who's minds have only a blind hate for the indivisible rights of another innocent other. And often truly hate men and women for being Just as wise. The McCainiac Zombie video is a perfect example. When the Zombie is asked about the rights of Women, the McCainiac Zombie cried out for raping more Women. The position of authoritarian power, was only found with the bushite as oppressor, rapist, torturer, or Air Force Bomber, not liberation by freedom. The bushite McCainiac KNOWS it can't compete

openly to defend it's criminal treasonous
actions! Remember, Alex "the Conservative"
thought McCain was the choice if you had to make
one, earlier on, then changed his position,
sort of, later by calling them all puppets not
worth the effort, but .. Obama's idea's matter
not, it's that his Birth Certificate is, no war
too be fawned. Palin? who's she? McCain
firebombed Vietnam as "war hero" for France?
The Banker doesn't cover our loans? Matters
little.

Norwegian doctor: Israel intentionally targeting civilians
http://rawstory.com/news/2008/Norwegian_doctor_in_Gaza_Israel_targeting_0105.html

"All that is happening in Gaza here now is against
international law, it is against humanity and I
think it is against what it means to be a decent
person. You don't treat other people like this.
Even if you disagree with himï¿½ maybe even if you
fight with them, you don't treat civilians, children
and women like this."

Israel deliberately targeting civilians in Gaza
http://www.youtube.com/watch?v=Ev6ojm62qwA

It was almost acknowledged on CBC radio that
nazi Israelis, use the argument that a tin can
rocket traveled miles, to kill some innocent
Jew as a direct hit (likely a person who hated
godless NEOCON), all because that nazi state
has OPENLY, as PUBLIC policy, stolen water and
food including baby formula, along with a huge
list of other atrocities, to punish God and
Humanity since way back before three of four
truces. AGAIN, Nazi Israeli always, as ungodly,
break their truces. Why? Because YOU, or Christ
as any Jew's life means nothing, to all the
'free' billions they'll get from given American
worker wages. Look, Americans refuse to call
for the arrest of Bush on their national,
"truth telling" Coast to Coast radio program.
Why? Because, for one, George Noory, (Alex
Jones' best buds), has told US he's into
killing innocent kids as powerful, and that
'bin Laden did it', Is good enough for US.
You don't get a say here however how you will
live or die. George Noory calls all grunts
heroes, and those who refuse criminal orders,
those he wishes to go ballistic on. Yes, it's
true, George Noory is still alive and happy

as ever.

Rise Up for innocent Life, or don't and see
where it'll get you in the end.

Again, every soldier in the Air Force serving
for the neocon liar is a traitor warranting death,
to save the lives of their next innocent victims.
They have murdered more than two million people
in Iraq. They are pushing heroin into America
from Afghanistan. They are raping AMERICAN
women as officially "LAWLESS" (can't be arrested
but through Rumsfeld - who has not seeked any
prosecutions for the raping of American Peoples.
He, as Neocon, is TRYING to DESTROY FREEDOM
For all Americans in America - while paying
with American wages, South African death squads
to murder Black men) and TV'ed Americans refuse
to speak for Justice denied themselves. Zionist
amerikans only see US as innocent others, not
themselves to pay, but they do pay, they will pay.
God, nor John will not live in a world where
bushite grunts walk freely down our streets as
first degree mass murdering rapists, torturers,
and thieves. Celebrated by CNN, CBC, and FoxNews.
Especially when they DEMAND they have greater
rights than Human Beings. Mass Murderers deserve
immediate death sentence to defend ourselves
from their demon lies and betrayals to God and
Man. Every CBC and CNN reporter who reported
Russia attacked Georgia unprovoked will warrant
trial, then death sentences for their total
commitment to the Satanic NeoCON enemy war
criminals. Remember: they targeted for murder,
helpless innocent families. YOUR family. CNN
wants you to blindly believe, CNN personalities
like ENEMY George Noory are so happy, why would
we think they willed death against our great
Humanity by conning you for more stolen money
through the sacrifice of YOUR life for zionist
criminals who laugh at your powerlessness to
raise your voice for Justice.

Stealing the Title of Jew from Christ:

Fallujah by the Sea: Aping America, Israel Unleashes Chemical Weapons
in Gaza
http://uruknet.info/?p=m50412&hd=&size=1&l=e

Look at this picture of nazis indiscriminately slaughtering
our Humanity, while on MSNBC they reported that the Nazis
will continue to murder Humanity until a truce can be found,
A truce that the Satanic enemies of God will naturally break,
as they ALWAYS do. They are godless enemies of Life who wish
to steal the Title of Jew from Christ. They targeted Jews in
Lebanon with seven million land mines, and let Jews starve to
death in Israel for more charitable aid they can steal from
G-d's Good Will. When asked by Israeli newspapers why, it was
said to kill a Jew is rewarding for the godless Zionist.
Public record. Die bushite die.

http://lataan.blogspot.com/2009/01/israeli-zionists-guilty-of-deliberately.html

/ / In doing so, this makes Israel guilty of using
its own people as ï¿½victimsï¿½ for political purposes. \ \

ISRAEL BROKE THE TRUCE - ISRAEL BROKE THE TRUCE

-

a-mother-from-gaza.blogspot.com

This web site is the winner of greatest interest internet site of the years 2000s.

Israeli plan to topple Hamas, re-instate Abbas
http://a-mother-from-gaza.blogspot.com/

/ / Breaking the truce Nov. 4, then, was Israel's way of getting the gears rolling for this whole sick game: the toppling of Hamas, and the re-instating of the impotent Abbas into Gaza so the "peace process" can remain forever in formaldehyde, to quote wiseass, er., Weisglass. \ \

Nov 4th! - perfect!. We are dealing with Nazi war criminals who refuse US, as a Species, Justice for everyone. Especially The Jew's Jew, Johnny America. Hint: they call us Love just to hide our complete agreement with this Living Universe to will Justice for God as every last bushite zionist freely moving. Once all the neocon zionists are rotting in a prison cell, or formally executed as godless war criminals, we all will have one joyous welcome in a heavenly future.. Until then, demand Justice for US. That's YOU too. Angels included. Who? I don't see no Johnny Wizard here anywhere, We are Good to Go. Rise Up for innocent Life, or don't and see where it'll get you in the end. The bushmob are traitors for closing official FBI investigations into 911, immediately after the mass murder of Americans occurred. Treason, of a, trust WE don't have it in US to stand for our common values as the Revolution will not be televised, Johnny Who. Man, are we or no? Be Somebody, then get on your phone to call in for Justice willed. Alive I Say! - this must be where you'd raise the dead and dying.. if you only could raise your finger to dial the phone numbers - well guess what? - I Command You Can! - snapoutofit - Speak for pursuing Justice on 911, and show serious concern for publicly paying private banker men trillions in worker wages for nothing. This is seriously disturbing, yes, but seriously important to address openly in our spaces to remedy with a Johnny Wizard World Wide Work of Wonder, Super CNN Special of Specials, with Your Host, the One and Only, President and CEO of Shareware Earth Co. John Himself. Hey everybody! Wow eh? So a.. when is the good guys showing up? Now. Justice. I want US to Host Coast to Coast for open Public communications, where things get solved because we know whats we're learning about. We of god, this way comes, then men and women with calculators to know: giving money to private bankers

on hopes they'll lend a small fraction some back
to ourselves at high interest is dumber than rocks.

Arab American rally in Dearborn for Gaza
http://www.youtube.com/watch?v=AVP4_-u6MV0&NR=1

Israel Drops White Phosphorus Bombs, Littlest Victims Suffer
http://www.apfn.org/apfn/DU_Israel.htm

My friends, demonic evil forces do exist to STEAL
the living rights from anyone of us, especially
including the Jews. Remember, it is the zionist who
steals God's good name through lies left unchallenged
by private corporate interests tied to the CON of
private banking in total. Christ is a Jew too.
Israeli broke the truce knowing such action woud get
killed Jews in Israel, a cash bonus! Like starving
Jews do attest on a infomercial that ran for near
18 months across Canada. Then covered by the Israeli
press, that the Zionist officials there actually
enjoy the prospect of suffering Jews because it,
OUR SUFFERING, will attract more charitable aid the
ungodly criminal enemy can use elesewheres! Hitler
revisited. I am the Son to God and I wouldn't lie
to you about an issue as hughly Satanic as this.

White Phosphorous: Israel fires artillery shells into Gaza
http://www.sott.net/articles/show/172089-White-Phosphorous-Israel-fires-artillery-shells-into-Gaza

We can overcome this, and create a better world in
the process. It's back to the simple things: open
communications, and evidence, evidence, evidence
to convince ourselves truly of anything. We are
in a horrible dream right now, that we must arrive
ourselves into for comforts. Arrest the Neocons for
treason. That of course includes anti-gay faggot
Bolton for his and Kalilizad's treasonous lies
brodcasted on FoxNews these last few days. And
Peter Powers for the London bombings while we are
at it, then, we'll really being going places.

/ / My relative's neighbors- 3 young children- were
all killed today \ \

-

Satanic Enemies of Christ

CNN with Blitzer allowed reported on Larry King
that Hamas broke the truce, without any uttering
of fact. While when the nazi israelis were accused,
just minutes earlier, Mark Regev could say only

silence. The zionist Satanic enemies of Jews speak only silence, because they know they are satanic enemies liars of Human will.

Again, these SATANIC enemies break their truces everytime, then state, it is Humanity's fault because CNN will never ALLOW the humans to know. They are murdering innocent People in hospitals for example, or those in a Church, just as amerikan bushite nazi grunts do for the escape of the neocon zionists responsible for 911. To hunt a lawless bushite nazi grunt, and kll it instantly is to defend it's next innocent bombing victims. Bush and Cheney closed 911 investigations on 911, therefore killing a lawless bushite traitor for our Humanity is just to get ourselves together to arrest those responsible for mass murder on 911. The deaths of bushite zionist liars is a mercy given for the love of God. Die bushite die.

Israel Nazi State

Israeli nazis state they will murder humanity indiscriminately until rockets stop falling on their country. Yet, they broke the truce. They always break their truces. Understand these Satanic enemies of God, dropped seven million land mines on Lebanon when learning the conflict was over. They will kill Jews for money, THEY are the Nazis. Nazi Mark Regev is clearly insane. 'It wasn't israel that started this' He could not stand with any man without instantly being exposed to All of Humanity as a war criminal in need of immediate public trial for death sentence. These are only innocent people being bombed. In a concentration refugee camp. Look, it's a prison camp. And if YOU
were a prisoner there, and Texan child rapists are something you'd wish to defend your community from, you'd maybe join the Gazan police force, run by Hamas, a political group democratically elected. All police officers in Gaza, Nazi israeli claims warrant 1000 lb bombs, not warrants for arrest for a criminal offense. Remember, it was Israel that broke the truce, as so is spoken by Palestinian government officials speaking internationally - using the example from November. But understand, as Satanic fraudsters, they always fuck over Our Innocent Humanity this way.

What kind of "Human" would commit such crimes against Life? Cheating Liars for Satan God tells YOU.

The Bible "I know the blasphemy of them which say they are Jews, and are not, but are the synagogue of Satan."

Look, these enemies of Life steal INNOCENT PEOPLES HOMES as thieves of The King of Jew's simple philosophy.

The Reality of Zionist War Crimes in Gaza
http://www.youtube.com/watch?v=GDjthFt6EZg

The zionists aligned with Bolton are using radio-active weaponry against all Christians. What do "Christians" in America on Coast to Coast have to say? Nothing because that demon enemy of Life George Noory, the pro child killer, insists as Truth's closest most bestest friend, bin Laden did it.

most moral army in the world:

Our reign of terror, by the Israeli army
http://www.ifamericansknew.org/cur_sit/rot.html

Glorified by CNN, CBC, and FoxNews:

ï¿½do the Gazans know that only Hamas is to blame for their sufferings?ï¿½

Remember those same news groups will KILL Americans too with poisons in our foods while smiling as George Norry does Daily

-

Gray Ghost

/ / Funny thing noone ever shows pictures of the scumbag Hamas rockets falling on Israeli civilians, but the nooz is full of Palies suffering. Fuck you all I hope Israel exterminates the vermin. \ \ He can advocate the MURDER of innocent people for the neocon liars, and Google doesn't destroy his account?

Remember Zionist Nazi Israeli started all their murder rampages against Innocent Peoples for 'free' welfare money, as broke the truce with, IDF funded Hamas on Nov. 4th. They have been indiscriminately bombing People with excuses that never do add up. Example: Nazi Israeli stated they were in the right to murder ANYONE

in a car or truck in the entire nation of
Lebanon, (especially in the Jewish communities)
because like enemy "Gray Ghost" would say, all
those innocent Peoples deserve TO DIE AS MURDER
VICTIMS for his sadistic ungodly pleasures.
Remember, Nazi Israeli didn't mention this until
thousands has already been murdered, then even
still, without radio, TV, or newspapers, telephones,
or sky writing how were ONLY THE INNOCENT JEWS
as officially targeted to know? Then the seven
million land mines to kill innocent kids for
generations. To the enemy of Life, Gray Ghost
it matters not that Israeli started the conflict
by sacrificing nazi vermined trashed as Satanic
dumfuk enemy soldiers sent across the border,
to Grey Ghost, all it knows, is Justice must not
be allowed to win this game for our human race,
for he would be truly seen as a sadistic enemy
of Freedom, powerless, or rightly dead for
his proud treasons against life in this universe.

ZIONIST DEMON LIARS TO SHOW HIT ON TRUCK FULL OF ROCKETS ACTUALLY HIT
TRUCK FULL OF WELDING TANKS
http://english.aljazeera.net/news/middleeast/2009/01/20091117737115874.html

Please John begs all People's of Humanity,
Americans do not have the courage to even speak
concerns for their dying as evil state of godless
private banker ruled blind tyranny. 'Duh, yeah
give billionaires trillions, trillions, TRILLIONS
to help the poor homeless mothers poisoned by
FoxNews CRIMINALLY.' Gawly je, I dunt no y dat
detnt work-ed' - o wel, cary ohn my wayward Son.

Livni: Gaza truce would give Hamas legitimacy

See? this is why NAZI I$raeli thinks they have
an excuse for bombing people indiscriminately
to break a truce they signed on to. This isn't
a one time, maybe two time occurrence, but every
time in the last 60 plus years the zionists
aligned with Hitler have. Satanic enemies
of Humanity.

ANTI-SEMITE is FoxNews every time they assault God
with "Israel, the Jewish State" to torture, steal,
and murder.?. ANTI-SEMITE!

The Ungodly Zionist - a report from the front

/ / The most recent victim of Israeli airstrikes
was 10-year-old Ismail Hamdan \ \

To the Satanic enemies of Man, the Ungodly Zionist,
an innocent murder victim's life can not be allowed
a defense such as the charge of first degree murder
against Netanyaho because, he states no Justice to
any who believe in the Jewish cause, as Hillel, of
freedom as Liberty for all. If Jews ran Israel,
Netanyaho would be chastised publicly by the Humans,
for sanctioning the criminal acts of first degree
murder. The nation of Nazi Israel STEALS Peoples
HOMES. What other nation on this Earth commits
such willful crimes against innocent Human beings
OFFICIALLY? Steals homes from god loving innocent
folks and labels it our 'Justice system'? Who? Neocon
Amerika, the nation that gave trillions to bankers
recently on only prayers that their gods will maybe
lend some of their own money back to them at high
interest. But alas, evil is the deceived disguised,
as in their deep ignorance of money and virtue, they
do not understand, the private banker never covers
the loan. Never does a private banker reach into
it's pocket to borrow US to begin with - so as a
consequence, the bankers have just pocketed all the
'free' loot for nothing, TRILLIONS, and are not
saying why should they help anyone else with charity?
it's the amerikan way. Instead, hate the wise socialist
who designed a working good traffic signal system,
where lives are saved and congestion is eased, or
hate the white man, the black man, different People.
But never Mr. Bush, Mr. Cheney, or Rumsfeld, the
neocon traitors who closed criminal investigations
immediately after the crimes of 911 occurred, who
doctored the NIE to con America into death, and
never slight the trillioniare private banker gods,
who have stolen/taken our public authority through
war criminals in Congress. Taken from all others
to bring us a much poorer world suffering due to
our speakings of contempt for Justice as christians
in America - who claim in silence only indignation
for real Christian families robbed or murdered
Officially by the zionist state of ungodly Israeli,
paid for by dying America. Americans refuse to raise
their phones for the arrest of the bushmob for capital
mass murder, so, what's private trillioniare bankers
walking away with the entire economy in free fall
going to do for them, when they are already to
death for the glorious Zionist Neocon thieves of
Civilization? Proudly in hatred for Innocent
Humanity. Again, Hamas was founded by Zionists
in the IDF, to kill Jews for money - public record.
Jews starve near death in Garbage dumps of Israel,
all because the Nazi Zionist UNGODLY government

states it is beneficial to starve Jews, for, they will receive more humanitarian aid THEY can use elsewhere. Public knowledge. Zionist liars murder innocent Jews for money, like they did in Lebanon, and like the zionists did on 911 by forbidding the pursuit of the terrorists by following the crimes scene leads at the real murder scene. Unjust enemies of Man.

To arrest those responsible for 911, we are going to need to form a public warrant for a person or persons. Bush and Cheney are guilty of closing investigations on 911, treason, called obstruction.

UnHoly Nazi Israeli Racists are Greater than the censored words of Messiah!

IDF's YouTube Gaza channel to Correct Ourselves

/ / it will disseminate footage of precision bombing operations \ \

Precision? They dropped seven million land mines in Lebanon, after having seeked out where the Jews lived, (Northern Lebanon), and murdered them firstly! JEWS. They, as enemies of God, like those of FoxNews, will refuse these type of FACTS on their hatred for Love and Justice. Their hatred for Jews, real Jews, like me. Understand: American baby formula has been contaminated with poisons, and FoxNews doesn't think it's important to their corporate responsibilities to kill ourselves further for profit. The Zionist will murder anyone just to steal your belief in God as Love. They HATE me for being wise and Just. Hate. For, why wouldn't America support my demands for open radio communications on the Coast to Coast radio network? Americans would rather murder Humanity before Justice succeeds beyond their illusions of grandeur through the mass murdering of ourselves for stolen gains. The banker does not cover our loans! Giving them trillions for free unquestioningly is dumber than rocks. Enough.

Fake Rocket Attack
http://xymphora.blogspot.com/2005/02/fake-rocket-attack.html

Remember however, the Zionist has no qualms about killing Innocent Jews too if it means Americans will get it more free welfare to murder ourselves. They openly STEAL Peoples

homes in that nation run as thieves don't
You know? Or as it is just open public
knowledge that the Zionist excepts that
911 was actually a good thing for them as
war criminals reaping the cash rewards for
continuing capital murders?

/ / Ehud Barak promised that the war would
continue ï¿½to the bitter end.ï¿½ \ \

That is you there Barak promises to end
bitterly as the innocent the demon targets
for ungodly murder. How could ANY REAL MAN
steal food from a Christian baby? How do they
do it?, as the inhuman. (Like bushite do in
Iraq, while on CNN in interview tell US, they
are there war criming for neocon traitors to
steal everything as "helping the Iraqi
children". They offer no clean water, no food,
just indiscriminate bombing campaigns of evil
incarnate. True fascist nazi enemies of true
freedom in America who advance censorship to
anyone like myself. Why? They lose. They are
not men but Satanic enemies of the King to
Jews, the Messiah. I Am. Thieves to the
scriptures of Hillel, and of Moses. Thieves
to the intent of every true religious person,
for God is everywhere. God is the Word, and
the Word is Holy. So, fuck you and die bushite
nazi traitors to American Justice, those of
them who refuse US open free words to resolve
their war criminal behaviors as is done in
godless Israel today against INNOCENT
Christians. Done before another innocent other
has our homes stolen, or is murdered by the
lawless grunting bushite dumfuk enemies of
Jesus Christ. I am King already, always have
been, always will be. Live with it. The Koran
is filled with great understandings on this
relationship. Christ is mentioned more than
Mohammad - and Mary can be understood as the
mother of all being before we are. a virgin.)

Look humans, you've
had your fun murdering yourselves, now the wise
people will compete for bettering ourselves by
understanding. Who the fuck are these illiterate
monsters at CTV national television? and how can
they willingly keep our soldiers in the dark dying
that way by simply smiling? Are they experts in
anything? are they respected researchers? writers?,

politicians?, civil rights lawyers? - do they even
respect ourselves enough to be warned of vaccines?
NO, instead they LIE with such contempt for Humanity
I am surprised Canadians, don't speak out more..
perhaps they do, it's just CBC, CJOB, and the
Winnipeg Free Presses of our World make no attempt
to inform ourselves about it. They don't take my
thousands of calls, how about Yours?

Life is real to know, if you seek, and not go
so freaked out as Living is as it always has
been. Knowing God is cool, 'amazing', yeah,
whatever, but we are of too this real world
suffering for our lack of respect for a wise
person speaking. I WANT FREE PUBLIC DEBATE
FOR JUSTICE AS ALL INCLUDED. Now really, is
that too much for US to ask freely? What say
you Googler? Afraid I will truly make your
banker gods look like fools?, the gods we all
give more than half our lives to for nothing?
Don't want to look truly dumb as deathly
ignorant, so censor US all themmers you are
too in command of your Fate. So be it. See?
Stand in. I didn't even really do anything
there, yet it's written, it's done. A Miracle!
Imagine: your Christ! YOU. now what are you
going to do.. time is ending for you remember,
now what are you going to do? Will you pick
up your magic phone and call likewise for
Justice denied, or will you crawl up on your
cross and die in silence for the glorious
Zionist aligned with trillioniare private
bankers and Satan? Christ is of all peoples.
Your on a mountain.. You've raised yourself
from death already, and your here to do
something greater for the love of God..
what's your plan for the common man? Welcome
to the real world my friend.

Morpheus 'Nobody can tell you what the Matrix
is, you have to see it for yourselves. .. all
I am offering is the truth Neo, nothing more'

Lawless Police to Defend Who Again?

They Call it Terrorism

"Israeli nazi enemies call bombing people,
like they do without apology, terrorism.
What can't you figure?"

CNN TODAY

/ / Stand down 'Christian' nation. It's
not your babies. Ethnic cleansing is not
a 'sin' as long as the 'chosen ones' of
Israel do it. \ \

Israel, the nazi enemies of God nation broke
the ceasefire on November 4th. Now, as demon
liars claim they want to honor a ceasefire
again to further steal ourselves from the
Love of Justice. Why do the godless Zionist do
this always as first degree murderers? Because
they can't win an open debate on their treasons
against God and Man. The private bankers DO
NOT cover our loans. Again, these SATANIC
ENEMIES OF GOD dropped seven million land
mines on Lebanon while target killing JEWS.
INNOCENT JEWS. Targeted. Northern Lebanon,
look it up. Israeli MURDERED Jews. Innocent
Jews as targeted for more stolen charity. I
again, beg you to support my call for war
crime trials against the bushmob, including
CNN demons who report a total contempt for
YOUR life dying. Your call loser.

ISRAEL: No civilian casualties in Gaza!
http://uk.youtube.com/watch?v=RlZd3vR6Kzk

Satanic enemies of God as anyone included.
Think: who buys these demon lies to steal
further from our innocent Humanity? Zionists
do at CBC and CNN, who will murder America
by openly lying to destroy freedom. Example:
CNN reports Georgian nazis who targeted
children schools, churches and threw grenades
into our homes to murder as minions for Satan
are called freedom fighters. Just like the
Third Infantry, the new lawless police officers
of California, who can't be charged with rape
for example, because ONLY Rumsfeld can okay
such prosecutions. Hey who cares for Iraqi Rights
right?, for TV America's CNN with FoxNews and
George Norry doesn't, for it's only American
women and children now right nazi enemies? And
WE ALL KNOW, cowardly America refuses to even raise
their phones for these dying concerns. How can
George Norry continue to live happily dying
America for the neocons? How? they let them.
Alex Jones thinks George Norry is just
fantastic, so no, don't encourage the NWOers
to demand free communications, because if we
did, Alex Jones and the like, would factually
look like the idiots he is. (better to die

America than face this foolishness?) The
banker doesn't cover our loans, we do Alex.
So giving them trillions in American worker
wages is a bank robbery in progress. Simple.
NOT a diabolical ingenious plan, we, the simple
folk can't figure without the Alex Jonesers
geniuses of thought control developed by the
CFR, builderberg, the Boners and NASA.

Obama stated all lawless soldiers who war for
godless Zionism are heroes, which includes South
African death squad goons who murder my nigger
friends. AEGIS. I call them lawless enemies of
God, deserving death sentences to save the lives
of their next innocent victims, Obama calls them
heroes warring for the escape of the neocon
traitors responsible for 911. Who are you going
to believe?

Look, I plead

http://news.bbc.co.uk/2/hi/south_asia/7771243.stm

/ / Calcutta police arrested Mukhtar Ahmed
for procuring SIM cards for the group without
knowing that he was an undercover operative.

He was on a long-term mission with police
in Indian-administered Kashmir. \ \

His cover was blown?

This is a guilty\accused party to the offense,
and blind men of state plate, 'we're going to
maybe let him go, so they can start a war of
mass suffering and death.'? Who is "we" enemy?
Why is this story not where it should be? Who's
interest does it serve by further dying
Humanity to: we don't care about not stopping
terrorist crimes in progress then? Don't be a
Nazi. Why? Just because. THE 'suspect' WAS IN
ON THE MASS MURDER OF US. Justice for All
there you nitwits. Under who's command was he
working?, and does Condi figure in there some
where by sending TV America elsewhere? Who is
set to gain money in the planned indiscriminate
murderous bombings, and let's try, then execute
them instead of US as innocent victims how about?
King of Earth I am,

An American Patriot

FDNY Lieutenant Admitted Plan To ï¿½Take Downï¿½ WTC 7
http://www.prisonplanet.com/fdny-lieutenant-admitted-plan-to-take-down-wtc-7.html

Protect Elections, Prosecute Rove
http://www.velvetrevolution.us/prosecute_rove/

/ / The GAO reached the estimate of 190,000 missing
arms - 110,000 AK-47s and 80,000 pistols - by
comparing the property records of the MNSTC-I against
records US General David Petraeus maintained \ \

Understand this: Saudi commander Buford Blount, gave
out 170 tons of explosives for looting, all so they
could, shoot us up in Baghdad. A Saudi commands the
Third Infantry as traitors to the cause of Freedom.
Cowardly dying Americans are so due to self contempt.
Cowardly.

9/11's a lie

-

In a Normal World

"It's not that we're Jewish, it's that they are
war criminals."

IAF plans to hit targets in 24 hours
http://www.nation.com.pk/pakistan-news-newspaper-daily-english-online/Politics/23-Dec-2008
/IAF-plans-to-hit-targets-in-24-hours/2

"General Mullen is pressing our authorities to
allow India to hit certain targets,"

In a normal world, Mullen would be questioned,
then arrested, tried, and executed with Gates for
trying TO KILL INNOCENT PEOPLE for cash profits
stolen from God's America. But the nation is filled
with cowardly know nothings.. how do we know this?
They refuse to even pick up their phones to complain
about DYING needlessly for the un-elected Zionist
neocons. The TRAITORS who did their part to carry
out 911. America only PRAISE real demon George
Norry who openly lies to the ears of America, while
advocating the indiscriminate slaughter of all
children in around 15, because he claims, that way,
you reduce the risk that they might sometime in the
future own a gun to kill himself as a REAL bad guy.
These REAL monsters will kill your American kids for
cash. Why? Because YOU refuse to even raise your
phones for concern. It's "just" your neighbor's kid

who'll get the vaccine shot filled with toxins, drink the American Milk, chew the bubble gum, eat the Campbell's Soup, or drink the tainted water. The poisonous water containing sodium fluoride is in soft drinks, beer, and bottled purified water costing near 3 dollars that Pepsi openly confessed, they just get right from the poisoned public taps of Boston, unfiltered. TV America? where are you man? Why do you still refuse to raise your phones? You go in faith WITHOUT science, with reason?, without God, or even crave my words as the Great Son. Why do you forsake yourselves? Are you not worth the effort to say your own lives are worth something too?

Charlie Manson "Yes, your honor, I did authorize the killing of Sharon Tate and the rest, but you know, we need to focus on the future rather than the past!"

Bushite Nazi grunts of the Air Force have bombed more than a many innocent persons, claiming we as Humanity can't hold them to account for their murderous crimes of STEALING our lives. It is an oath soldiers give to obey lawful orders only, yet, a bushite's word means nothing. They bombed Samara for no reason but to die. They bombed Fallujah for no reason but to die. No honor, no courage, no manhood.

Where's MY Bailout???

"It's must be good to be too big to fail, or be a fat cat too big for jail."

In who's world?

-

http://www.sundayherald.com/international/shinternational/display.var.2476912.0.bulldozing_bedouin.php

/ / Where does Israel think these people are supposed to go, after evicting them and torching their homes??? \ \

See, the thing is, these Satanic enemies of both you and me, (along with every other life form is this Galaxy), seem to think hurting

innocent People, murdering ourselves actually,
will destroy God's Good Work for Justice
in our times, while they make of as terrorist
thieves.
It's not that we're Jewish, it's that they are
war criminals. How could any living Man, On
Earth, STEAL food from innocent infants and
mothers? Randomly send in Military rockets
into refugee camps? Who? SATANIC CRIMINALS WHO
HATE JEWS. Jews, Real People, like me. To all
be fair is my motto, as was countless others
- as also known as The Golden Rule. (look for
Johnny's The_Golden_rule.mp3) and don't forget
about Confucius!

-

CONDI DID IT ?

"In other words, Washington exerts more control
over the ISI than the duly elected civilian
government of Pakistan."

Now, that's bizarre. Imagine doing it, then
blaming yourself for it on hopes one thing
doesn't lead to another. All are innocent.
Justice is freedom. Lawlessness is evil dumb
man. Sorry, but that is now the world turns.

-

CNN Don't Want to Take our Questions

Cheney worked immediately after 911 to close
police investigations, as so reported
on Meet the Press, with the late Tim Russert.
Simple. Or cowardly like Alex Jones call him
just a puppet, and blame the NWO geniuses
hid away in far off places, manipulating to
secret out the blind idiots who don't truly
believe in elementary logic. This isn't
complicated.

Fed Refuses to Disclose Recipients of $2 Trillion
http://globalresearch.ca/index.php?context=va&aid=11416

Bernard Madoff -- The $50 Billion Thief
http://www.youtube.com/watch?v=0IhJJXjxmHU

This spot where the Jews laugh at law men,
then get all their life savings stolen, is
THE classic in the halls of Zionist History.

Some say, Christ, the Jew, is a law man
too don't you know.

This is What Americans Are?

/ / the United States has refused to sign
a declaration presented Thursday at the
United Nations calling for worldwide
decriminalization of homosexuality. \ \

Again, this Zionist infiltration is
designed to divide our populations through
demonizations against the Innocent. There
is no crime in loving people despite what
GCN advertizes.

"The concessions made by the Olmert-Livni
government to the Syrians do not and will
not obligate a government that I shall head,"
Netanyahu said. The concessions of indiscriminately
murdering US repeatedly? Understand to know:
The Zionist is a Satanic demon enemy of Humanity
according to God, in the Bibles all timelessly.
Netanyahu, the demon, is so ungodly as evil
criminal, he will likely "win" Istraeli the Zionist
election on a public platform of godless tyranical
theft and murder. Remember, Israeli Zionists
funded the creation of Hamas to kill Jews in
Israel, and TRUE Jews also live in Lebanon, Iran,
Etheopia, Canada, and the North Pole, and we're
the "niggers" there too that Israeli despise -
like as they who PUBLICLY supported South Africa's
oppression of Innocent South Africans for stolen
monies. Satanic I tell you. Don't believe? in
innocence? That's the power of Peres, the devil.
Evil a zionist criminal is proudly. Peres will
tell you, all about when Zionists target to murder
little old ladies as he did on Larry King, it's
really not Satanic, because they'll blame the
murders on someone else completely different,
as US, the innocent. blatantly. In your face.
While CNN goes, uhuh, gotta kill those Jews in
Northern Lebanon. As Syrians too! Israeli dropped
seven million land mines on more than 170 towns
and villages given to them from Condi! a godly
nation of Jews? ANTI-SEMITE is FoxNews everytime
they assault God with "Israel, the Jewish State"
to torture, steal, and murder.?. ANTI-SEMITE!

Again, the two Laws of Johnny:

1. No evidence, person innocent.

2. Torture? fuk you and die then

-

MY LIFE HAS VALUE

"You can't count on Congress or the Courts to save yourselves"
Ron Paul - The oUtRAgiOuS fUnnY MaN

Ron Paul is a traitor. He didn't support arresting
Bush for 911, or for the killing of American teens by
doctoring the NIE. Now, Alex sells Ron Paul, is
his leader of OUR truth movement because he says
there's nothing he's going to do but blame poor
people, or socialists,

"The Liberals and the Socialists, along with
the Communists and the Gays, with the Muslims,
and Community Organizers with the freaks different
that me did the murders", said near all the retard
bigot Conservatives blindly false accusing.
Example: Condi says Pakistan's ISI committed the
murders, the FBI says no, there isn't a scintilla
of evidence to substantiate that. Condi says
Pakistan's ISI FOR SURE did the murders, the FBI
says no, there is not a whisper of fact to form
that conclusion. The "Army" says for sure Pakistan
did the murders, the FBI says no.. There is not
a thread of fact a zionist offers to form YOUR own
mind in respect for your rights being equal to ours.
Condi only tries to hypnotize the "Conservatives"
into believing something without understanding,
without knowing. Sean Hannity does this everyday
on purpose to kill innocent American teens.
Conservatives are universally ignorant People,
and sometimes, serious war criminals like Condi.
Taking US off the target of following the crime
scene leads at the real murder scene. The
"Conservative" mostly doesn't have the mind to
understand Justice is freedom, like the NWOers,
so they false accuse US as Innocent others, for
crimes they don't speak for as Our true defense.

I'm counting on you kids eating right, and
knowing you belong free here. I'm King Johnny.
Hi.

Anyway,

Imagine: Alex doesn't ask 'hero truth
teller' Ron Paul for a million or three for
advertising on Bush and Rumsfeld's prior plan
to invade Afghanistan for Enron. Why not?
Who's money is it still anyway? Ours. In
God we Trust. Wanna see a card trick?

Christ Loves Everyone!!

I can FIX Monstanto's GMO assualt.

How? by understanding the science
involved, that Monsanto DOES NOT, and Alex, not enough.
(look for works I've done A DECADE AGO FOR ANSWERS -
Google however has removed more than 20,000 documents
referencing my writings as of last month - do you care?
That a man such as great as I, will not be allowed to
give my works for free to Humanity any longer? -
People of Earth: undertand, many in America say YES!
here, because they truly HATE Humanity's cause of
Liberty and Justice for ALL. Google closed my
Jew_Boy_Johnny account, all because of vermin like
"shitskin Moslem", who openly message in the
hundreds daily for murdering innocent Moslems,
who pirate all of Google Groups with racist
nazi slurs, just needs simply complain I am anti-Semitic
- The Son Of Man - no trial, no questions, no answers!
I can not post more than three times every four to six
hours, otherwise, they close my accounts, while at the
same time then, go through years of my writing to
sadistically destroy more. They figure they have
something in our Courts to support their treason of
assisting in mass murder against America by Zionist
theives who steal the title Jew, as in godly? while
shitskin posts hundreds daily pirating everyone's
threads with his EVIL hatred for God and Humanity, if
not even more from Israel) Not the Alex Jonesers way,
but the actual way logically understood as where the
problem resides. DNA, as is life, is multi-dimensional.

Where is this
"Christ" that CBC, CNN, GCN, and RBN harp on
that speaks nothing for real Justice to the victims
of 911, or Iraq, or Afghanistan? Or the children of
South Osettia? Alex is near fit, but he is far from
sufficiant. Jack Blood was great, but Alex we guess
doesn't want him looking like he Rulez like US
too though. RBN has it's moments, yes, I guess that's
true.. Things do seem to be improving, what with
all the torturers and rapists wanting to come home
as brain damaged Zombie police officers. They don't
want the laws of freedom though, too complicated.

They'd rather hunt down our families from the sky with bombs actually.. fuk, I hate EVERYONE in America's Air Force, every last evil fuk. They watch these videos and celebrate their complete indiscriminate murderings that get killed so many GIs - they celebrate the slaughter of our innocent Humanity . George Noory will kill your American kids, have no doubt, for, he already has.

CBC and CNN only smile to tell you all the great things they do by denying OUR Humanity these truths.

America is a cowardly evil nation desperate for excuses as still being run under by zionist thieves.

-

Israeli Settlers call Ethiopian Jews "Niggers"
http://www.ynetnews.com/articles/0%2C7340%2CL-3633163%2C00.html

This isn't isolated. The Jews of Ethiopia, are the actual Jews of the Bible. These monstrosities that God knows as Israeli, are Satanic enemies of Man. They steal our homes, rape or torture our INNOCENT families, and bomb Jews as the did in Lebanon TARGETED as an OFFICIAL function of their evil "government". They actually, a few years ago, gathered all the darker skinned toddlers, and murdered them as an OFFICIAL government of SATANIC action. More than 100,000 "Nigger" toddlers, Jews, they murdered with radiation poisonings. Officially. Now, Americans GIVE them money to bomb innocent Christian families indiscriminately guilty of nothing. They steal their desperately needed food and medicine. They are thieves of the most vile evil natures. Example: the Zionist who STOLE 50 billion dollars from American Jews will not be ordered to give back the money! Sure, they tell you that SOME of the suckered Jews, will get a small portion of their investment returned, but only through the wages of American citizens, NOT by the Zionist THIEF, T-H-I-E-F, who you are told OFFICIALLY "lost" the money. (will he even spend a day in jail?) He lost it, ah shucks, just like the trillions "lost" to criminal trillioniare speculators. And like the banksters, who never covered a dime of the money for the fraudulent loans, but get to STEAL your homes, and now wish to charge US a renter, for a home Americans, the illiterate suckers, actually paid for, and will continue to until they speak above the

laughter of a George Noory, or con man Bill O'Really, the true demon enemy. Or will instead? cowardly, will go like Alex Jones, naw, George Noory is a good guy, a happy guy, sure he speaks of the enjoyment in slaughtering defenseless innocent children, so what?, he's pleasantly happy to state all is well going ballistic against soldiers who refuse criminal orders from the Zionist neocon. Not a fuking dime!! Understand, this isn't just a, let's get the info out for People to know as Alex Jones sells to near overdose.. (we are mere mortals who work nine to nine Alex The Great.) CBC managers, all of them, have known since shortly after 911, that Bush and Cheney closed FBI investigations, they know that iron is on video flowing like water from the towers, THEY KNOW THIS because I personally told them. Yet, they smile as demon liars to die our teen soldiers CONNED deliberately. We need some serious police action in arrests of treason against all news celebs, who of course will get lawyers, (what they deny in happy silence to not mention against American torture victims) but will be shown conviction for their real contempt for the value of YOUR life my friend, our lives they watch indiscriminately die for lies they sell happily for stolen cash profits.

Dead Babies Can Take Care of Themselves
http://bellaciao.org/en/spip.php?article17872

/ / The FDA may not know a safe level but I damn sure do, that level is zero! \ \

But will Americans of America, even lift their phones against happy George Noory, CNN, and all that sees fit, to sit idly silently dying US victim in their corporate extravaganzas? I hear the magic money bag guys are in running the show from our central banking offices, in as a debasing culture of indifference to their own cowardly sacrifice. That's if we believe what we know of the fictions they sell ourselves. Georgia, Iraq, Afghanistan, and so on.. they lie to our world for criminal gains, gains they've seen near to overtaking them. Demand the arrest of Bush and Cheney for closing criminal investigations on 911 immediately after the crimes occurred. Then, without evidence, falsely accused an innocent man of the crime. A crime they knew enough of,

to plan before hand the invasion of Afghanistan
for Enron. Speak now, or, suffer to die in
tyranny you nation of fascist cowards.. your move.
Your baby.

Does this Work if The Judge is a Criminal?

http://rawstory.com/news/2008/DoJ_blocking_Obama_team_from_docs_1212.html

/ / The Justice Department has evaded a request
from President-elect Barack Obama's transition team
for documents about the secret programs of U.S.
intelligence agencies. \ \ Torturing innocent People
to death as guilty of nothing, or escaping bushite
rapists who target American women in Uniform,
while pushing heroin to enslave American teens for
zionist grave robbers. Not in Johnny's America I'll
tell you that right now.

It actually doesn't work that way though..
Justice is man.

NASDAQ chairman Bernard L. Madof STEALS 50 BILLION ! !! !!!!!!!
http://www.youtube.com/watch?v=MrcBazJ5Xas&eurl=http://www.brasschecktv.com/page/497.html&
feature=player_embedded

/ / CNBC's Davif Faber reports on the $50 billion
Ponzi scheme run bu ex-NASDAQ chairman Bernard L. Madoff. \ \

A Zionist STEALING from Innocent Jewish Peoples targeted
SPECIFICALLY. Somethings never change... Do you have
any ideas on the fact, that a great many Zionists
have been arrested over the decades for putting Nazi
Swastikas on their own grave stones? Also, did you
know an estimated more than 20 million Russians died
to defeat madman Hitler? Who's banker was Zionist George
W. Bush's grandfather? Do you know this yet?? Well,
now we know we know, to be King I am here your servant.
Just don't therefore figure I'm going to wash your
feet now. Be American.

http://www.worldnetdaily.com/index.php?fa=PAGE.view&pageId=83477

/ / New rules published in the Federal Register
would allow certain civilians to call American
soldiers into action inside the U.S. to prevent
environmental damage \ \

This is why it is outlawed by the American Constitution(s). Demon thieves must not be allowed to command mindless grunts who shoot people randomly for fun. As AEGIS and Blackwater, KBR enslavement camps along with Campbelli¿½s Soup, is in part, their acceptable Business partners, warring Humanity as US innocent for stolen profits with poison. Teen grunts are admittingly from any you honestly ask, portrayed ignorant low life failures, drop out bushite vermins who want to in turn, victimize the innocent as they accept America, as them, must tyranny as cowards for traitor war criminals. Criminals like them in Afghanistan, who openly defend poppy fields to imprison American citizens say nothing on their trailer trashcan talk, internet forays for blatant complete disregard for suffering Mankind. These grunts of far off military dictator shipping nations, that the TV neocon wants patrolling our Americans streets, don't instead fight proud for our honorable Police Service successes - of whom play our Freedom game for the law books sighted as rights heretowin. A force that claims they are lawlessly un-accountable, is a force of evil against our great lands. Friends, they hide nowhere in darkness, ready to be exposed for Public questioning. Soldiers were caught dressed as al-Qaida, murdering police officers, and when they were in jail, awaiting trial, the bushite grunters, broke them out!! With "American" Tanks commanded by a Saudi in some likelihood. (Buford 'where's the billions?' Blount is a Saudi military commander, who in his off time, also commands, the Third Infantry!) Posse Comitatus will be a good thing to impose as standing Law..?. You're the American Patriot Soldier. Need help? Well, I could be your make believe King for the time being.. by just simply, forwarding these life and death concerns as our own. We have some rights here Soldier to have Justice prevail as our benefaction. The bushmob did 911. Your call.. Don't be dumb now. Your call..

Lawless enemy world of enslavement though naked ungodly tyranny?, or American Liberty as Justice believed for the victims of Guantanamo? False capital accusers who take our concern awry are our problem in fair Governance here, when we understand this, we will have conquered the world as the new orders. No evidence, person

innocent. Torture? fuk you and die then. These
be the glorious tales we tell of times ago, where
men were men, and war criminal zionist nazis were
hunted down to defend Life ourselves. When a
bushite enemy of America dies, it's a glorious
moment for all innocent Peoples defended from
it's lawless terrorism. They are traitors who war
for the escape of the neocons responsible for 911.
Cowardly traitors who LIE to America to con
further more from the American victims.

The CNN political team chooses the videos, not YOU.
http://www.youtube.com/watch?v=sEJTd0oSB7k&feature=PlayList&p=86DBD53BE904238D&index=0&pla
ynext=1

Give Free to Banker.. Loan Back Maybe? Paleeze..

Why We Do the Things We Do

Sales pitch: Mankind takes on the world as One
with the calculators. Civilization DID happen!
Correct math scores are not impossible to find as
an answer to: why we do the things we do. Americans
gave private interest bankers trillions on only
Hopes that these, the most obscenely wealthy of all
the upper classes, are going to graciously lend
some of our own money, (we just gave them,) back
to us... in dire need. at interest! It's for our
benefit baby, don't you cry. This is just plain
dumber than rocks Johnny Wizard says okay. And
simply going to a gold standard is not the easy
made NWO answer, it is accounting for ourselves
that is going without questions. The private
banker is highjacking our public authority for
their private interest of exploitation.

Our governments are not holding Private Bankers
to some kind of public authority to question who's

interests are being devalued here. This is why
the thing has been messed around for so long, We,
the People, have been too foggy on super basic
math skills as pronounced by, truly effective
Jewish leadership. "The Private Banker DOES NOT
cover our loans, we do." Read that again now.
And acknowledging, we, as conscious, can succumb
to suggestion without knowing what we are even
saying sometimes really. Everyone wants to play
the lead, but few are wanting guitar practices.

It get's easier as you try..

Answers: we need a tax on every buy and sell to
limit speculation in the stock markets as it was
prior, while openly discussing how the
investigations are going, in returning the 700
mill that was given through for another means by
Congress. For the private bankers to take that
money elsewhere, is to neglect the problem
persisting of home owners, and that mortgage
issue they forgot US about. Why Americans
desperately, at peril, gave the money to begin at.
Look, while arrests are transpiring, we'll then
discuss using the re-cooped stolen money to finance
all remaining mortgages on family homes at zero
interest levels, upto, let's say for now: $500,000.
It's an idea I'm putting out there to dialog on
with you guys and Obama. Obama!! How's it going!!
Hey man, we can work it out.. You don't seem like an
impossible person to reach. Hey, make life interesting
in ushering in a new peace plan by communicating. Now
I know your all pals with everyone as government, as
that is what a successful politician can do sometimes
good, sometimes criminal. Obama, we can't let these
con men go. These have been times of lawless wars
against God as indiscriminate bombings, of torture,
of slavery, of heroin pushing, of national looting of
a Peoples Treasures. How much is too much for you my
poorer brothers and sisters of the faith? Obama, let's
believe in ourselves. These bankers are stuck crooks
for no faulty but our own. It's still our money however.

King Johnny Earth, White House Jester. !

Our dreams have come true... Boo!

the money?... \ \

People who know they defeat all "Conservatives"
in seconds with indisputable simple logic, will
eventually rule this Universe, if CNN, CBC, and
Alex Joneser NWOers allow open communications
on what is understood by all as high acts of treason
openly committed without a defense of smart people
explaining why/how we are being rooked as idiots
on purpose. Crazy man, crazy. Oh.. anda..
justwondrin', would be the first name Reza be that
of the feminine or, echem.. masculine? Just
curious on language that's all..

Oh, logic like, "Buying in bulk is cheaper."

-

Godsmack - I Fucking Hate You
http://www.youtube.com/watch?v=FiPtHkfDXus

Hey! Johnny's new theme song playing when
I be bagging the bushite zionist whores of
the demon antichrist, Our Mr. Bush Jr. Bush
closed 911 investigations, Bush lied about
Saddam not letting inspectors in, Bush never won an
word fairly in his entire war crime life of
game rigging with naked deceit and betrayal to
the cause of Man, die bushite die. Rock on
my friends, rock on.

"Army deserter deported from Canada, now in U.S. jail"

This is a for real war crime. Why? there was/is
no cause for the Iraq war. Truly. Example: why
bomb if you can go anywhere without delay? To
only murder innocent People INCLUDING SOLDIERS
to thieve from ourselves as war criminals is what

any rational person comes to understand. When you
destroy bushite grunts who war God for rape, torture,
and enslavement of our species, you save the
innocent lives of their next victims. To hunt
the godless bushite enemy, is to love Justice
as our glorious Humanity winning over the lawless
nazi grunts of the Third Infantry - who'll shoot
anybody, blindly as cowards, led by a Saudi, Buford
Blount. Their "leader" who left Iraqi's largest
weapons depot undefended for looting. Qaqaa. Killed
many a bushite nazi grunting lawless coward by his own
treasonous brand. And mumbling bushite nazi grunts have
what to say about American teens made valueless
victims for Neocon bounties? "whore yay" That's
about it..

LETTERS NOW RELEASED PROVE-Bush Intervened-To Suppress Torture
Evidence
http://www.democraticunderground.com/discuss/duboard.php?az=view_all&address=389x4994330

This is called ungodly nazi war crimes against
innocent Human beings.

Obama Gets Tough to Shield Bush Torturers
http://chris-floyd.com/component/content/article/3/1694-protection-racket-obama-gets-tough
-to-shield-bush-torturers.html

Who does Obama think we are as 'United' together
on pro lawless torture against innocent 'others'?
Wake up people, we are under attack by those
who refuse US Justice to win Freedom for
anyone. "Conservative" retards are completely
lost here, because they do not have the
intellectual skills necessary to understand:
a person accused of a criminal offense without
any evidence is innocent. Or, how about, No one
deserves to be tortured for confessions on
crimes left then unresolved for actual
retribution. [Aegis OPENLY murders innocent
families for more American paying for zionist
monies - P2OG - YOUR Spouse, YOUR Child, YOUR
family].

Following the crime scene leads of 911 to nab
the actual evil doers is beyond the will of the
deaf, dumb and blind? with lawlessness gaining
for monetary loses due America as corporate
cheaters. We are Brilliant, of that much I am
certain. Conservatives are minimally, idiots.

Worst Person in American Broadcast Journalism
http://www.youtube.com/watch?v=ll2YW32bqi4&feature=channel

This is like, so profound. Gibson's condemnation
is directly aimed at his own ideas of the subject
he has no grasp of. Wow. profound. See though..
this "popular" FoxsNews celeb has zero interest in
helping America succeed to defend freedom through
lawful actions, because he has no sight of a better
world blindly destroying itself. Hey Gibson! why
don't you try and be a good guy for a change! No
joke. Wow. Profound.

-

Israelis forced mother to choose which of her children would die
http://www.daily.pk/world/middle-east/9374-israelis-forced-mother-to-choose-which-of-her-c
hildren-would-die.html

/ / the soldiers told her she had to choose five of
her children to ï¿½give as a gift to Israel.ï¿½ As
she screamed in horror they repeated the demand
and told her she could choose or they would choose
for her. Then these soldiers murdered five of her
children in front of her. \ \

Funded by the American tax payers as a gift to
God as our stolen Humanity. Equal rights for all,
especially the Taliban's position in defense of
America, demanding evidence to form our guilty

verdicts.

-

Obama Accused of Blackmail over Terror Trial Evidence
http://atheonews.blogspot.com/2009/02/us-accused-of-blackmail-over-terror.html

Again, Obama is taking a position to torture innocent
people here as a traitor to Just cause. Just cause to
live in a free society. Torture warrants the death
penalty under American STANDING Law.

Video: Cop Punches Woman In Face Four Times During Arrest For Riding A
Bike
http://www.liveleak.com/view?i=99c_1233639102

Top Cop Johnny Judge rules: Ten years in prison.
Maybe fifteen if the dumfuk grunt, back from the
war against Iraqi children as a traitor to American
values, shows no remorse for his crimes against an
American women either. Absolutely any cop or soldier
who disagrees as true contempt for our freedoms with
punishment against this nazi trash pirating our
police uniform, WILL WARRANT death sentences all
around to ACTUALLY defend liberty in my America.
Any American father who prides in killing innocent
Iraqis for the escape of the neocons for 911 is no
father. And a wife should get the hell away from
a male who enjoys murdering helpless innocent others.
Children in such families should be challenged
by relatives through the Courts to save the lives
of our endangered offspring. Again, without water
or food, Iraqi children are murdered by Neoconner
grunts irrationally everyday with nothing to say,
aka, without reason but as Satanic Bush whores, to
make our God as Humanity suffer further for their
escapes as actually selling freely, lawless zionist
savagery.

KILLING MORE OF THEM - reporting war crimes to the Police
http://www.youtube.com/watch?v=gB-KaIBDNJw

Again, a bushite has no commitment to defend
America, for it speaks nothing for the arrest of
the neocon traitors. traitors like themselves whom
will murder innocent folks like your Self to steal
our common values. Wouldn't you glory in seeing
these savage grunts who on video, indiscriminately
shoot innocent families, or bomb a city entirely,
executed by Christian Patriot firing squads? or
televised to fry in the electric chair for these
documented war crimes? I sure would. It would make

our world a much safer place to raise a family
secure in knowing, bushite grunts as enemies of
everyone, were hunted to extinction for their
crimes against our Humanity. Hunted by Johnny Law,
the True Spirit of America.

Johnny Law for Coast to Coast radio Host!

yaahhh im a real person! Wow eh? Now,
let US bag some bushite scum for the Gipper.

UK judges accuse Obama Administration of suppressing torture claim
http://www.timesonline.co.uk/tol/news/uk/article5661291.ece

Yeah really. What kinda world does Obama take US
for here? Does he actually believe we hold no
interest in being attacked as ourselves, the
innocent forsaken? A reminder: an American was
executed under Iraqi law without any evidence
brought against the accused, while the grunts
were offered an excuse to seek not the culprits
at the terror scene. The case was lightly reviewed
at democracynow, a year or two ago, and can be
found by searching for a grunt pretending to be
an ambassador to Romania. A case where the Judge's
life was threatened by a "General", where if he
didn't order the death of the innocent American
citizen, the grunt with the General would murder
US all right then and there. The Innocent American
was murdered as forsaken for value shared by
free men.

-

(pet bed cat trees...)
http://www.petbed-cattree.com/cat.html

Hey! this stuff for cats and dogs looks pretty
coool. Check it out if your a pet lover!

Near Impossible to believe!

/ / "similar themes go through all our streams. And it all
comes back as Confucius says, "Do unto others, as you would
have them do unto you." And Christ said that, Hillel said
that, Buddha said that, everybody says that, cause that's all
it is. But bushite, he wants to accuse People of criminal
offenses without any evidence, and indiscriminately slaughter
everybody in countries, for no good reason but to be OUR
ENEMY, an ENEMY OF ALL PEOPLE." \ \

-

AG Holder-- First, Jail All Bush's Lawyers
http://www.consortiumnews.com/2009/020309.html

For actual documented criminal actions against
American interests in defending ourselves from
indiscriminate robberies, tortures, or mass murder.

"Judges Bribed by Private Contractor to Sentence More Kids to Juvie
Detention"
http://www.philly.com/philly/opinion/inquirer/20090128_Editorial__Judges_Sentenced.html

Christ speaks!! Echem.. This is called a criminal
action to falsely imprison American children for
more stolen money. Will the contractor be arrested,
tried, then executed in America to defend American
children? Unlikely, because it isn't as important
as how fat Oprah is today, or as Alex Jones the
bigot would say, on how daily, the hidden NWO elites
are responsible for every criminal action against
Liberty in America, not war crime dictating LIAR
Bush who told US Saddam wouldn't let the inspectors
in without corporate news correction, Bush, who
closed Police investigations on 911 for Enron, KBR,
and the Kissinger associates. And certainly not
Bremer for personally stealing tens of billions,
no no no, "just puppets" "just puppets" as instead,
the Illuminati in other words not allowed spoken
understood with Alex Jones NWOers. I want a free to
speak arena where 50 percent of what Alex spews is
truly dumber than stupid. Why? because he is controlled
through his personal weakness of bigotry, to actually
believe foolish things as factual. Examples are
truly endless when we discuss Alex Jones'
dumminess, but here is one example. Alex states
911 truthers were attacked in a TV show as NWO mind
control- but, the "truther" he referred to
talked in the drama on there being NO PLANES!
A dis-info bushite stooge if ever was one depicted
with special effects. We suffer with his bullshit
every day, knowing if we tried to phone, would
not be granted a minute because I, in support
of Freedom for America, make all bigots look truly
dumb as fascists lashing out at nothingness to
divide our masses. And apparently, he can't have
America becoming greater for defending ourselves
fairly through Judicial actions.

-

which side are YOU on? by REBEL DIAZ
http://www.youtube.com/watch?v=8Dr05tXktSo&e

The side where a person accused of a criminal
offense without evidence is innocent, and in the
case of capital accusation, the false accuser
deserves severe punishment as an enemy to my
Humanity.

U.S. partner, not Hamas, firing rockets into Israel
http://www.palestinianmothers.com/profiles/blogs/us-partner-not-hamas-firing

/ / The probe found the Islamic Jihad rockets were
actually fired by Fatah. \ \ Whom Israel in response
to the confessed by all to be true facts, murdered
innocent Christian children in Gaza as war criminals.
Actually claimed it was regardless who shot the tin
can rocket that struck no one harmlessly. Again,
Nazi Israeli responded by murdering innocent Christian
children as war criminals with "disproportionate"
force. War criminals who murder Humanity to steal
our shared values.

-

Dennis Kucinich "Israel is Killing Children With Your American Tax
Dollars"
http://www.youtube.com/watch?v=HrtPpk6nhF8&feature=related

Israeli openly admitted that they targeted those
innocent Christian children for MURDER - as -
continuing "disproportionate" force in our names
as enemies of God and Humanity. They are not Jews,
but of the evilest group of lawless nazi savages
pirating the government of Israel away from US Jews.
I demand open debate in America, and Americans refuse
me by not likewise demanding international coverage
on the Coast to Coast radio networks. Let's change
this by communicating.

Ceasefires, Israeli-Style
http://sjlendman.blogspot.com/2009/02/ceasefires-israeli-style.html

They admit TODAY, as yesterday, and last week, month,
year, decades, that they target completely innocent
people for murder to punish Humanity for believing
in God as Just, or real freedom understood as practiced.
Libertarian couldn't give a shit on a issue such as this,
that they keep everyone ignorant of through hypnosis. Israeli
openly admit to thieving innocent peoples homes, to them
be sent at gun point, to live in a concentration prison
death camp.

http://www.davidduke.com/

/ / ..the Israel Prime Ministerï¿½s speech in which he
actually boasted of his power to order the U.S. President
as one would a dog. \ \ and all American men can't for
some god forsaken reasons, can't for their lives, phone
George Norry to be hung down on. George Noory is a "good
guy" for aiming to go ballistic against every American
who refuses criminal orders to destroy themselves.

Obama set to allow Bush-era ï¿½torture flightsï¿½
http://timesofindia.indiatimes.com/Obama_set_to_allow_Bush-era_torture_flights/articleshow
/4067338.cm

What the fuk eh? Doesn't Obama know this
crime warrants death in America according
to the war crime act? Does he believe America
just will never have a chance to speak for the
interests of US as innocent Human beings he is
planning to torture as an enemy to Life?

Refusing to Defend American Values

Yoo: Bush okayed torture to outwit defense lawyers

This is why it warrants the Death sentence. Remember
corporatist Amerikan citizen, these torture victims
that include children as younger than a hundred, had
not been alleged to have ever committed a crime in
their entire lives. Victims tortured to death for the
pleasures of those Satanic, such as General Geoffry
Miller, who tell US today as confidenced, they do it
because, patsy wasted American soldiers will just refuse
to hunt them down for formal executions. Let's change

this for our Humanity in this future, to look back,
and know, American males were men of the World, who
stood for the principles enshrined within every living
Constitution. A free man shall not be jailed, or
tortured by anyone in our names as Governed, without
the perpetrator tried publicly for execution as our
Love of real Justice. As first degree mass murderers
warranted death sentences under the War Crime Act
ushered by Reagan!, all done in for our protections
of their next innocent victim - ourselves. Or
die a death in corporate tyranny worthy the title,
cowardly traitors to God and Liberty. Blackwater,
CACI, AEGIS, KBR and the like will all be hunted to
extinction for refusing to quit their lawless Rape
and mass murder, murders done for more stolen money
as America's name high-jacked. The Lawless enemies
shall be prosecuted by the honorable Soldiers of
the Good old, Red White, and Blue. Count me at
our words on this, I am,

King Johnny

-

Ungodly Israeli Nazi LIARS Continue to Murder Children after "Truce"
http://www.youtube.com/watch?v=-HQO0774lx4&feature=PlayList&p=4199C9262539936D&index=0&pla
ynext=1

A truce means nothing to Hamas?, who states
much of no complaints as in support of Israeli
Nazi lies, why? Have you seen where a blimp is
traveling about five miles an hour, fire bombing
thousands, and none have even a pullet gun, never
mind an Iranian rocket launcher to shoot the Satanic
demons down for God as Love? Why doesn't Hamas
at least admit, like an Israeli General has,
to be funded by Zionists for cash gains paid for
by Zionist Amerika? Why? Why is it that Hamas
suffered near no loses, but all the Cops who
voted who knows, died murder victims trying to
defend our family from Texan child rapists?
Along with thousands of others targeted as
innocent Peoples? Targeted. Why? Nazi Israeli
broke the truce!! THINKTHINKTHINK Demand coverage!
Hamas certainly isn't. ..maybe because they're
illiterates on the Cause of God's Will being
Just?

Bushwhoring Enemies of the American Police

What a demon enemy of life these bushwhore enemies
of American Liberty are eh? No concern whatsoever,
for all the teen soldiers conned to die for those
who committed 911 in NYC. The millions of bombing
victims, the tortures, the rapes of American women,
STILL, TO THIS DAY, left undefended by "the law".
Evil enemy of everyone these demon fuks are. How
difficult is it, to understand the facts they feign
complete blindness on? They WANT to con you as the
coward to life they are, willing to kill America to
make their antiChrist lawless enemy Mr. Bush happy.

From years after the fact still demanding Justice now:
http://groups.google.co.uk/group/alt.military.uk/browse_frm/thread/ca0e34fb32caeb0a?hl=en&
scoring=d&

Huh? "at last been disarmed..." ? How does he figure?
The equation hasn't changed. Example: The same
unaccounted anthrax, (that was disintegrated into ash),
still is not able to be measured as completely accounted
for, (never could be), but this bushwhoring war crime
apologist, tells US, it was only though the lawless
murder of our good friends and family for countless
generations, that he now attests without reason, or
evidence, to find Iraq in "fact" disarmed of it's still
nowhere to be found, weapons of mass destruction. (An
irrational reason he pronounced previous in corporately
broacasted public support of instigating heinous war
crimes against our humanity under the leadership skills
of the evil lying demon antiChrist, our Mr. bush Jr..)

Ron Paul defeats 5 TV 'experts' in 10 minutes
http://www.youtube.com/watch?v=0k92fTDReHg&e

Ron Paul is a traitor. They stole the cash Ron.
And, the Iraq war is a war crime. But Ron, the
Fascist, doesn't want THESE FACTS uttered. Why?
Because wiser men would prevail, wiser men like

me who understand buying in bulk is cheaper. Those like Christ who understand, who KNOW, the banker doesn't cover our loans - so why give them as much as a taxed red penny?, let alone trillions as officially unaccounted for? They are stealing the cash Ron. Ask yourself: Why has Alex Jones forbidden his bushwhore cult from understanding Bush doctored the NIE?, or of iron flowing like water from the towers? Because wiser men would prevail and he can't have that. He called shooting innocent men in the back, an act of liberty. I, an actual god, unlike Alex, lie near never, but maybe to myself when I'm lonely. Alex yes will tell you rapists are free to do what they will in Texas to American children, un-arrested, but he won't mention it when the police chief is with him on air, talking about how he'd like to be exempt from traffic tickets for being so popular. NO MENTION of the rapists walking away without arrests made, no mention of Bush's documented treasons on 911. Where are Alex's priorities? In selling YOU out so he can be wealthy like a bankster?, and have special rights over everyone else that drives drunk, or speeds? a big hero standing over our dead soldiers yelling, I told you so, I told you so, I was right, I was right. Again, understand: It is not by my will to deny open debate with America, it is Alex, and his demon buddy George Noory that denies out Humanity this right. And when people try, like Peggy, or Black men on Jewry, Alex lies cheats and steals our wills for further thefts. Ron Paul's family has millions taken from loyal Alex Jones fans. MILLIONS! Does Ron do commercials with that money highlighting the bushmob's plan to invade Afghanistan, dated two days prior to 911 for Enron? Of course not, wiser men would prevail to expose him as the charlatan charity raider he is regarding Health Care, Social Security, Public Schooling, earmarks.. It is unfair to measure Ron against corporate nazi zionist whores of MSNBC who willing, openly, kill American teen soldiers for criminal neocon gains, as an honorable gentleman's talk. Half honest People like Ron are extremely ignorant on the workings of our world. EXTREMELY. I joke here not. Evil is the deceived disguised - translated - evil people are always dumb.

Corporate America says no, Charlie Manson was a genius, but not, that most Americans are prone too easily to suggestive states where they can be made to believe

anything blindly. Think: what does, "bin Laden did 911"
mean anyway? You should know of what I'm trying
to teach you here. That is how
Alex knowingly or otherwise, steals our rights, by
beating off he knows everything already. And some,
if not most, actually believe him without knowing
squat either. It's sooo easy that way - no study
required!! LIBERTARIAN HELL! Everything is not on
the Internet, where it near should be, but regardless,
a Libertarian can't be bothered to read anyway.
"Free Talk Live" is the best example for this: the
two hosts are unbelievably ignorant on just about
every single subject under the sun, but beat
CONSTANTLY, on how greatly wise they are as drop-outs.
You wouldn't believe any of them when they speak on
Freedom, if you simply understood, an innocent man
does not deserve to be in OUR prisons, or tortured.
Under any circumstances that Obama has excepted for
our excuses. Magna Charta. But in Alex's 'genius' mind,
he doesn't need to actually understand he is a for
sure bigot, (measures another unfairly in a group HE
concocts from blind hate or personal fear - typical
CONSERVATIVE and/or racist) who has no problems with
that at home, or at work. Provable in seconds by
OPEN DEBATE, but Alex ain't gonna take our calls
because, he can't for the lives of every People
person thought of here, admit he could have
something to learn, therefore, the NWO is
unstoppable in his brain washed cult of indifference
to Justice practiced for the benefit of all treated
fairly. Why? He's not wise enough to respect the great
minds of the audience, and I personally believe,
he doesn't even have the good judgment to own
a gun. (I mean, why wouldn't Alex find my stories
of OUR Justice system triumphing by my single hand at least
minimally beneficial to his blind cult followings? to not
hang up on me immediately while spewing lie after lie
on how I'm top secretly a dis-info NWO artist working
for Bush? or whose voice sounds too friendly to trust?
like he has done the last four times I've phoned -
Hey! I can be an asshole if you want - no prob.)
Perhaps it's near because, Alex Jones is blind, and
as such, could actually be found guilty in Texas for
murdering those two innocent black men shot
in the back with his approval to release the murderer
from a RIGHTFUL death sentence prosecution. "law of
Parties". He is a party to the crime, for he worked to
support the release of the FOR SURE, FIRST DEGREE MURDERER.
Sound like an America you could live with? I didn't
think so either. I wanna be Alex's Attorney. Texas is

a State of massive lawless corruption, as dire
incompetence in legal affairs where they OFFICIALLY
plan executions against innocent People not established
to have harboured criminal intent! With Jury Trials!!!!
!!!!!!!!!!!!FINING THEMSELVES GUILTY!!!!!!!!!!!!
While Alex does express murderous criminal intent,
and the Police chief calls him a good man for no
scary pressures. What the fuck is wrong in Texas
where they mess themselves like this regularly?
Imagine, while Bush with the Neocons escape, and
Zionist Israeli target to murder Christian School
girls OFFICIALLY, Alex doesn't want to have to pay
traffic tickets like the rest of US. What a douche bag
to tell he LEADS our Truth movement I say. Now, I'm
not saying he shouldn't contribute with the truths
WE SHARE, far from it, it's just he can't have our
cut off switch to silence our objections to his exposed
foolishness, and/or blatant criminality. I'll give him
a chance, for starters, to criticize any position I take
while we all publically call on ourselves for
assistance internationally. Like on his "buddy",
George Noory, deserving to be tried Publicly for the
traitor he is, and be formally executed after his day
in Court. Our Courts. Teen soldiers have been conned
to die by George Noory for the escape of the neocon
terrorists who committed 911 with Condi, Runsfeld,
Bush, Myers, Tommy Franks, and General Ahmad. AND
HAPPY GEORGE NOORY KNOWS IT - and cons with lies
naked to the ear of any who can listen or hit record.
A NAKED traitor to the cause of Liberty if we ever knew
one regarding the War Crime facts of Iraq. .And
Ian Punnet is an evil godless enemy Bush whore who
lies too to get YOU killed as the innocent soldier
forsaken so don't forget.. It's YOUR life. It's God's
Gift. Now support our rise for popular international
debates to get these Neoconners behind bars
awaiting Public Trials! "Public"thatsoyu!! Get to
the Phone to call someone to care man.. Johnny
Jesus has arrived! Justice Will Be Done in this,
Our Kingdom to Come.

Justice to the war criminals of
indiscriminate warfare would better serve ourselves
to halt for our safety. The bushmob did 911.

1. The ISI's General, Mahmoud Ahmad funded 911's Atta

2. We have video of iron flowing like water from the towers

Humanity Under Attack by the Zionist Enemy of Life

GAZA APPEAL THE BBC & SKY REFUSED TO SHOW
http://www.youtube.com/watch?v=c9kwpxlZorI

Not only that but the BBC argued that to show
innocent Human Beings suffering, in CRITICAL
life threatening need of desperate food and
water that Israeli nazi stole, (because they are
unlawful murderous thieves), would have them look
like they were partial to serving Humanity's
interest in compassion for US humans. Over the
Israeli terror Nazi tactics of indiscriminate
slaughter for more Amerikan welfare. Wicked evil
nazi bastards who too, DO NOT THINK IT BEST to
report Peter Powers committed the London bombing.,
Oh yeah, and mercury is neural toxic, anti-psychotics
make us crazy, and sodium fluoride makes us
stoopider while weakening your body for big cash
surgeries - ultimately leading to a profitable
death for dah' winnahs.. So, they, the BBC-NWOers
just needed to avoid the bath or shower,
humidity, Pepsi's purified bottled water product
lines, koolaids, swimming pools, Jacuzzi, Hot Tub,
Sauna, private Whirl Pools, and.. blh blh blh

/ / the FBI says no.. There is not a thread of
fact a zionist offers to form YOUR own mind in
respect for your rights being equal to ours. \ \

Who is the guy who keeps writing such things,, and
shouldn't he be recognized as Promotional to raise
all spirits towards a better future? I'm with him.

The U.S. Is Required To Bring George W Bush & Donald Rumsfeld Before A
Court! U.N. War Crimes
http://www.youtube.com/watch?v=BRAlqkPbjP0

Olbermann | Bush Years: 8 in 8 Minutes
http://www.truthout.org/011809Z

Bush and Cheney are traitors to the cause of
American Liberty. To leave them free, is to leave
America un-guarded from further transgression.

The bushmob doctored
the NIE. Conned Congress, and Soldiers. Did 911,
by closing criminal FBI investigations immediately.
Alex and George don't seem to want US to know
these FACTS that demand arrests of the culprits
responsible for high treason against Johnny's
America. Alex wants your money, and EVIL George,
our enemy, wants your soul stolen for Satan.

Turley: Obama 'accessory' to war crimes if no prosecution
http://rawstory.com/news/2008/Turley_Obama_accessory_to_war_crimes_0127.html

Understand, Alex Jones doesn't want Justice
for Americans because he loses out to better
men that usher a greater life. He doesn't want
the evidence of George W. Bush made public to
defend American teen soldier's lives. The true
fascist Alex Jones, who in silence supports the
escape of Bush for treason, will fail our true
voice for Justice in our times. WE DO NOT rule
the truth we share equally committed to defend
ourselves from lawlessness. And you'll never
rule my right to speak freely over your intent
to sell us all out for monetary swindles, just
like Ron Paul did. Understand: Ron Paul doesn't
even acknowledge 911 was an inside job, or, that
Bush gave zero evidence to form Your opinion.

Alex Jones, the Slave, told US today that
he challenged Bush for eight years - Bushite
lying nazi traitor. Not only that, but he
also ridiculed those who wish to blame Bush
now for anything! Again, he doesn't want
Justice where bad guys can't steal from
ourselves unrepresented. Ron Paul is a
multi-millioniare, made rich by charitable
aid conned from Alex Jones' NWOers! Alex
Jones doesn't have a problem with that, we
do.

Israel to be Judged - Universal Petition
http://www.tlaxcala.es/reponse_signataires.asp?lg=en&ref_campagne=10&Page=1

The demon LIAR zionist Israeli is a godless enemy
of Humanity, much like everyone at Foxnews, CNN,
BBC, and the CBC. Our revolution against the godless
bushite shills, will not allow our revolution
through speaking honestly, (to become of ourselves
something greater), a chance to be televised for
our benefits. Bush closed criminal investigations
immediately after 911. According to the FBI and
Senator Dashle. CNN says you have no power, Foxnews
says you have no power, the BBC says you have no
power, the CBC, the same, like Alex Jones NWOers...
but well, don't believe it. YOU Do have the Power.

http://www.iran-daily.com/1387/3324/html/east.htm#s359247

/ / International attorneys have filed war crime charges against 15 Israeli political and military officials including Ehud Olmert, Tzipi Livni and Ehud Barak. \ \

-

We must demand open communications to bring back values WE ALL would agree to through polite debate. "Conservatives" don't want this Freedom idea expressed in general terms because, a "conservative" is universally, minimally. a bigot. Why? Life isn't like, their way, - then- all other opinion under the sun on how things actually get done. (Aka "socialist" traffic light repair men, or "liberals" who want to treat The People fairly). Or who we are as equals to our laws fairly practiced. Pay attention to what I am saying here. Liberals can be Dicks with a capital D too of course. But a Hannity couldn't survive 2 minutes with me speaking on his very real treasonous behavior in OUR public arenas. Behavior done to escape the 911 culprits from the long arm of the Law, with his conscious will of criminal deceit exposed, we all learn to better defend ourselves. And Shawn Hannity can't have that for ourselves, he takes too much money from ourselves as talentless by keeping US in the dark dying needlessly for traitors never elected publicly.

Who am I you ask? Johnny Law. at your service. Look me up with usenet to discover, we live in a world of idiots everywhere pretending to be somebody by lying. While I want US all to truly improve our condition by actually understanding how bad off we are by failing to respect ourselves for correction. Too many, know it alls, with not enough to know you need evidence to form a guilty verdict against an accused man or woman. Not according to CNN, CBC, MSNBC, Foxnews and the like however. Let's change this by supporting my challenge for top billing at the Coast to Coast radio show hosting. Look for me coming soon!!

-

Unseen Gaza High Quality: Part 1 of 6
http://www.youtube.com/watch?v=UeezoWRu1FU&eurl=http://whatreallyhappened.com/

Why is it that numerous visits don't change the view count? What is this business of a=a+1, the top secret, I'll go rhythm, that is way beyond our comprehension in it's scientific complexity? For Americans, okay, but the Human species just isn't this dumb.

While Zionists OFFICIALLY target Christian school
girls for mass murder, CNN instead reports that
bushite grunts attacked girls in Afghanistan, posing
as Taliban. I WILL every celeb at CNN to be arrested,
tried and executed for the reporting they have done
today without facts. Remember: the Taliban played no
part on escaping those responsible for 911, and opened
schools for girls, and were brought together on the
single purpose to defend women. Death to CNN reporters
to LIE for killing OUR school girls. I HATE zionist
enemies of Humanity and God I am.

The Torture Ban that Doesn't Ban Torture
http://atheonews.blogspot.com/2009/01/torture-ban-that-doesnt-ban-torture.html

/ / Obama's Executive Order bans some -- not all -- US
officials from torturing but it does not ban any
of them, himself included, from sponsoring torture
overseas. \ \

Is America a nation of Law to Live freedom?
Because this SPECIFIC deviant action of Obama warrants
the death sentence under Reagan's "War Crimes Act".
SPECIFICALLY. Or, is it you falsely believe Obama
can do no wrong against innocent people here, where
an illiterate nazi grunt, maybe from South Africa,
will kidnap YOUR children, and torture them to
death for sadistic pleasure, with as they did using
power tools caught in Iraq, according to Iraqi
government official(s), and several soldiers from
Oregon, all because Obama has given an ILLEGAL!
"excuse" to NOT support following the crime scene
leads at our REAL murder scenes? Again, death to the
bushite dumfuk enemy of God, death to the enemies
of a freeing Humanity striving for a just society.
Obama needs to be arrested for this under the Law
as it stands I'm sorry to say my friends. Why?
Torture is illegal in all 50 states, (as Reagan
directly planned), no matter where you ship the
innocent victim to, or from! Read the War Crimes
Act, then demand Justice today, otherwise, it's
YOUR funeral. Obama wants to secretly torture
Peoples here, while lying to US ALL that he doesn't!
A TRAITOR! Who also wants to give bankers 100s of
billions of dollars more to disappear, that WE pay
for, out our door, never to be seen as our own
again.

Jack Blood interviews Richard Andrew Grove, an AIG insider and
whistleblower
http://video.google.com/videoplay?docid=6546044203900048624

Alive We Say

And Alex Jones gives us the same guy twice
a week that blames the Illuminati, while
encouraging that YOU TOO! can get money
for nothing like the banksters. Just give
the Alex Jones', NWOers, the "truthers" money
money money money. No time for affording the
explanation that the TREASONOUS bushmob
doctored the NIE. That Saddam wasn't in
violation of 1441. That a NEOCON is
identifiable for it's demonic LIES
against God and Man. Never to tell, the
private bankers don't cover OUR loans,
that Bush PERSONALLY worked to close
Police investigations immediately after
911 (obstruction), or that WE have video
of iron flowing like water that PROVES,
without doubt, bin Laden couldn't have
single handedly placed the explosives
in the buildings, or stole the black boxes.
Because someone surely would have spotted
him dragging his dialysis machine what with
all the professionalism of corporate news
media coverage regarding our horribly
suffering worlds. Alex Jones ignores the
treasons of Bush, as a Bushwhore, and
instead, tells US of how Obama is Bush on
steroids. He only wishes. What about
Justice for Americans Alex? Why for do you
forsake ourselves? For money? What about
the lives lost to mass murder, that you
allege to champion OUR TRUTH without saying
much of anything on real Freedom?, on real
Justice like your deviant election rigger,
Ron Paul? Well, no wonder, Alex told US he's
into shooting innocent American People in
the back as a tyrant of evil, a white Devil
if you will. Kids too if you dare look in
his back yard for a copper. See? Now if Alex
doesn't allow US to speak, more and more will
understand to know why. I am a defender of
all that is right and just in this world,
because I don't need to lie like Alex does on
a huge host of issues. I'm more like Jessie
Ventura, in where I don't need/want to lie.

If I end looking foolish, (of which I like never truly am), it's a benefit, because that way, I've learned something. Alex knows everything already, and 'is always right'. Like I say Retarded. You weren't right by not understanding that the banker doesn't cover the loan. One example of easily hundreds. He's a typical, he knows it all, know nothing dumduk American. Hear him on health care speak as Ron Paul does, and know, I defeat them in under ten seconds. TEN SECONDS. This is why he hasn't in years, allowed me to speak more than five or six words. He's rather all America die, than admit he does NOT rule our 'Ocean of Truth'. I want the challenge of opposition through debate to PROVE my skills beyond reproach. Alex, every time, just hangs up on anyone who tries to improve our communications by factually speaking. Why? Because he IS TRULY deeply ignorant on what freedom or Justice means. Why we have law. What a consensus is. Allan Watt is severely disabled in this regard, another Alex Jones favorite. And this is why, Allan can't take calls openly either. He has jerked off with himself too long to quit now learning super basic precepts, for like Alex, he "knows" the inner workings of the 'genius' NWO elites. Not Law 101, not Bush, not Rumsfeld, Not Condi, not Torturers, not bank robbers, rapists, or even petty thieves. Allan Watt isn't a bad guy, he's just a chauvinist pretending he actually knows something, when his real disability is directly related to his absence in understanding understandings. Doubt is a near foreign concept. A challenge for Allan: can you get your 'genius mind' around the fact that Peter Powers did the London bombings, and not the Illuminati of 1463? and if not, why are we so dumb to our present plight that way? Don't get me wrong, Allen has much to offer, it just isn't the issue right now on saving our dying futures. Maybe I was too hard on Allen, he is really actually kinda cool. Alex Jones too has many incredible moments of ecstatic clarity increasing in all they joy of seeking enlightenment. .. Ok - but this is serious business that requires little dilly dally with what we'll have as a side dish in Paradise Lost. We are talking Human Lives have been destroyed by our inaction to remedy these failures to communicate

effectively. and.. Jeeze, the weight of my responsibilities, as just plain John, being a/the Legos Man - for like the Family and everythings, get's me never forgetting, all we got are these words left dormant from the power they truly possess in the minds of the wise asses. And.. here I am. I'm a Talker of Words looking to make a break in the NewZbiZ. Zzzz... Alive We Say! Alive!

King Johnny, from Earth, has come for talks.

-

The Zionist enemy, the most evil nazi sons-of-bitches who openly advocate tyranny and oppression through mass murder of ourselves as the innocent left targeted defenseless. Enemies of Jews everywhere, the Zionist cares not for facts on who's Life it destroys for stolen gain by lying. That's why they target Jews, for fear the Light of Truth would expose them as the Nazis they are.

912. Traitor Bush closed 911 investigations immediately according to the FBI and Senator Daschle - Man, Mr. Bush Jr.'s WHORES sure are wicked evil letting the demon enemy of Life escape eh? - Bushite War LIFE Itself - 'Alpha company patrols the poppy fields.'

Private Banking Made Simple

http://www.megaupload.com/?d=0K03GAVY
http://www.mediafire.com/?xo9w32zmfox

I must be on crazy pills
http://www.uruknet.de/?p=m51615&hd=&size=1&l=e

/ / Well, why haven't the banks just returned
the money?... \ \

People who know they defeat all "Conservatives"
in seconds with indisputable simple logic, will
eventually rule the Universe, if CNN, CBC, and
Alex Jones allow open communications on what is
understood by all as high acts of treason openly
committed without a defense of smart people
explaining why/how we are being rooked as idiots
on purpose. Crazy man, crazy. Oh.. anda..
justwondrin', would be the first name Reza be that
of the feminine or, echem.. masculine? Just
curious on language that's all..

Oh, logic like, "Buying in bulk is cheaper."

-

Godsmack - I Fucking Hate You
http://www.youtube.com/watch?v=FiPtHkfDXus

Hey! Johnny's new theme song playing when
I be bagging the bushite zionist whores of
the demon antichrist, Our Mr. Bush Jr. Bush
closed 911 investigations, Bush lied about
Saddam not letting inspectors in, Bush never won an
word fairly in his entire war crime life of
game rigging with naked deceit and betrayal to
the cause of Man, die bushite die. Rock on
my friends, rock on.

"Army deserter deported from Canada, now in U.S. jail"

This is a for real war crime. Why? there was/is
no cause for the Iraq war. Truly. Example: why
bomb if you can go anywhere without delay? To
only murder innocent People INCLUDING SOLDIERS
to thieve from ourselves as war criminals is what
any rational person comes to understand. When you
destroy bushite grunts who war God for rape, torture,
and enslavement of our species, you save the
innocent lives of their next victims. To hunt
the godless bushite enemy, is to love Justice
as our glorious Humanity winning over the lawless
nazi grunts of the Third Infantry - who'll shoot
anybody, blindly as cowards, led by a Saudi, Buford
Blount. Their "leader" who left Iraqi's largest
weapons depot undefended for looting. Qaqaa. Killed
many a bushite nazi grunting lawless coward by his own
treasonous brand. And mumbling bushite nazi grunts have
what to say about American teens made valueless
victims for Neocon bounties? "whore yay" That's
about it..

LIFE IN PRISON FOR AMERICAN VICTIMS

LETTERS NOW RELEASED PROVE-Bush Intervened-To Suppress Torture
Evidence
http://www.democraticunderground.com/discuss/duboard.php?az=view_all&address=389x4994330

This is called ungodly nazi war crimes against
innocent Human beings.

Obama Gets Tough to Shield Bush Torturers
http://chris-floyd.com/component/content/article/3/1694-protection-racket-obama-gets-tough-to-shield-bush-torturers.html

Who does Obama think we are as 'United' together
on pro lawless torture against innocent 'others'?
Wake up people, we are under attack by those
who refuse US Justice to win Freedom for
anyone. "Conservative" retards are completely
lost here, because they do not have the
intellectual skills necessary to understand:
a person accused of a criminal offense without
any evidence is innocent. Or, how about, No one
deserves to be tortured for confessions on
crimes left then unresolved for actual
retribution. [Aegis OPENLY murders innocent
families for more American paying for zionist
monies - P2OG - YOUR Spouse, YOUR Child, YOUR
family].

Following the crime scene leads of 911 to nab
the actual evil doers is beyond the will of the
deaf, dumb and blind? with lawlessness gaining
for monetary loses due America as corporate
cheaters. We are Brilliant, of that much I am
certain. Conservatives are minimally, idiots.

Worst Person in American Broadcast Journalism
http://www.youtube.com/watch?v=ll2YW32bqi4&feature=channel

This is like, so profound. Gibson's condemnation
is directly aimed at his own ideas of the subject
he has no grasp of. Wow. profound. See though..
this "popular" FoxsNews celeb has zero interest in
helping America succeed to defend freedom through
lawful actions, because he has no sight of a better
world blindly destroying itself. Hey Gibson! why
don't you try and be a good guy for a change! No
joke. Wow. Profound.

-

Israelis forced mother to choose which of her children would die
http://www.daily.pk/world/middle-east/9374-israelis-forced-mother-to-choose-which-of-her-children-would-die.html

/ / the soldiers told her she had to choose five of
her children to ï¿½give as a gift to Israel.ï¿½ As
she screamed in horror they repeated the demand
and told her she could choose or they would choose
for her. Then these soldiers murdered five of her
children in front of her. \ \

Funded by the American tax payers as a gift to
God as our stolen Humanity. Equal rights for all,
especially the Taliban's position in defense of
America, demanding evidence to form our guilty
verdicts.

-

Obama Accused of Blackmail over Terror Trial Evidence
http://atheonews.blogspot.com/2009/02/us-accused-of-blackmail-over-terror.html

Again, Obama is taking a position to torture innocent
people here as a traitor to Just cause. Just cause to
live in a free society. Torture warrants the death
penalty under American STANDING Law.

Video: Cop Punches Woman In Face Four Times During Arrest For Riding A
Bike
http://www.liveleak.com/view?i=99c_1233639102

Top Cop Johnny Judge rules: Ten years in prison.
Maybe fifteen if the dumfuk grunt, back from the
war against Iraqi children as a traitor to American
values, shows no remorse for his crimes against an
American women either. Absolutely any cop or soldier
who disagrees as true contempt for our freedoms with
punishment against this nazi trash pirating our
police uniform, WILL WARRANT death sentences all
around to ACTUALLY defend liberty in my America.
Any American father who prides in killing innocent
Iraqis for the escape of the neocons for 911 is no
father. And a wife should get the hell away from
a male who enjoys murdering helpless innocent others.
Children in such families should be challenged
by relatives through the Courts to save the lives
of our endangered offspring. Again, without water
or food, Iraqi children are murdered by Neoconner
grunts irrationally everyday with nothing to say,
aka, without reason but as Satanic Bush whores, to
make our God as Humanity suffer further for their
escapes as actually selling freely, lawless zionist
savagery.

KILLING MORE OF THEM - reporting war crimes to the Police
http://www.youtube.com/watch?v=gB-KaIBDNJw

Again, a bushite has no commitment to defend
America, for it speaks nothing for the arrest of
the neocon traitors. traitors like themselves whom
will murder innocent folks like your Self to steal
our common values. Wouldn't you glory in seeing
these savage grunts who on video, indiscriminately
shoot innocent families, or bomb a city entirely,

executed by Christian Patriot firing squads? or
televised to fry in the electric chair for these
documented war crimes? I sure would. It would make
our world a much safer place to raise a family
secure in knowing, bushite grunts as enemies of
everyone, were hunted to extinction for their
crimes against our Humanity. Hunted by Johnny Law,
the True Spirit of America.

Johnny Law for Coast to Coast radio Host!

yaahhh im a real person! Wow eh? Now,
let US bag some bushite scum for the Gipper.

UK judges accuse Obama Administration of suppressing torture claim
http://www.timesonline.co.uk/tol/news/uk/article5661291.ece

Yeah really. What kinda world does Obama take US
for here? Does he actually believe we hold no
interest in being attacked as ourselves, the
innocent forsaken? A reminder: an American was
executed under Iraqi law without any evidence
brought against the accused, while the grunts
were offered an excuse to seek not the culprits
at the terror scene. The case was lightly reviewed
at democracynow, a year or two ago, and can be
found by searching for a grunt pretending to be
an ambassador to Romania. A case where the Judge's
life was threatened by a "General", where if he
didn't order the death of the innocent American
citizen, the grunt with the General would murder
US all right then and there. The Innocent American
was murdered as forsaken for value shared by
free men.

-

(pet bed cat trees...)
http://www.petbed-cattree.com/cat.html

Hey! this stuff for cats and dogs looks pretty
coool. Check it out if your a pet lover!

Near Impossible to believe!

/ / "similar themes go through all our streams. And it all
comes back as Confucius says, "Do unto others, as you would
have them do unto you." And Christ said that, Hillel said
that, Buddha said that, everybody says that, cause that's all
it is. But bushite, he wants to accuse People of criminal
offenses without any evidence, and indiscriminately slaughter
everybody in countries, for no good reason but to be OUR
ENEMY, an ENEMY OF ALL PEOPLE." \ \

-

AG Holder-- First, Jail All Bush's Lawyers
http://www.consortiumnews.com/2009/020309.html

For actual documented criminal actions against
American interests in defending ourselves from
indiscriminate robberies, tortures, or mass murder.

"Judges Bribed by Private Contractor to Sentence More Kids to Juvie
Detention"
http://www.philly.com/philly/opinion/inquirer/20090128_Editorial__Judges_Sentenced.html

Christ speaks!! Echem.. This is called a criminal
action to falsely imprison American children for
more stolen money. Will the contractor be arrested,
tried, then executed in America to defend American
children? Unlikely, because it isn't as important
as how fat Oprah is today, or as Alex Jones the
bigot would say, on how daily, the hidden NWO elites
are responsible for every criminal action against
Liberty in America, not war crime dictating LIAR
Bush who told US Saddam wouldn't let the inspectors
in without corporate news correction, Bush, who
closed Police investigations on 911 for Enron, KBR,
and the Kissinger associates. And certainly not
Bremer for personally stealing tens of billions,
no no no, "just puppets" "just puppets" as instead,
the Illuminati in other words not allowed spoken
understood with Alex Jones NWOers. I want a free to
speak arena where 50 percent of what Alex spews is
truly dumber than stupid. Why? because he is controlled
through his personal weakness of bigotry, to actually
believe foolish things as factual. Examples are
truly endless when we discuss Alex Jones'
dumminess, but here is one example. Alex states
911 truthers were attacked in a TV show as NWO mind
control- but, the "truther" he referred to
talked in the drama on there being NO PLANES!
A dis-info bushite stooge if ever was one depicted
with special effects. We suffer with his bullshit
every day, knowing if we tried to phone, would
not be granted a minute because I, in support
of Freedom for America, make all bigots look truly
dumb as fascists lashing out at nothingness to
divide our masses. And apparently, he can't have
America becoming greater for defending ourselves
fairly through Judicial actions.

-

which side are YOU on? by REBEL DIAZ
http://www.youtube.com/watch?v=8Dr05tXktSo&e

The side where a person accused of a criminal
offense without evidence is innocent, and in the
case of capital accusation, the false accuser
deserves severe punishment as an enemy to my
Humanity.

U.S. partner, not Hamas, firing rockets into Israel
http://www.palestinianmothers.com/profiles/blogs/us-partner-not-hamas-firing

/ / The probe found the Islamic Jihad rockets were
actually fired by Fatah. \ \ Whom Israel in response
to the confessed by all to be true facts, murdered
innocent Christian children in Gaza as war criminals.
Actually claimed it was regardless who shot the tin
can rocket that struck no one harmlessly. Again,
Nazi Israeli responded by murdering innocent Christian
children as war criminals with "disproportionate"
force. War criminals who murder Humanity to steal
our shared values.

-

Dennis Kucinich "Israel is Killing Children With Your American Tax
Dollars"
http://www.youtube.com/watch?v=HrtPpk6nhF8&feature=related

Israeli openly admitted that they targeted those
innocent Christian children for MURDER - as -
continuing "disproportionate" force in our names
as enemies of God and Humanity. They are not Jews,
but of the evilest group of lawless nazi savages
pirating the government of Israel away from US Jews.
I demand open debate in America, and Americans refuse
me by not likewise demanding international coverage
on the Coast to Coast radio networks. Let's change
this by communicating.

Ceasefires, Israeli-Style
http://sjlendman.blogspot.com/2009/02/ceasefires-israeli-style.html

They admit TODAY, as yesterday, and last week, month,
year, decades, that they target completely innocent
people for murder to punish Humanity for believing
in God as Just, or real freedom understood as practiced.
Libertarian couldn't give a shit on a issue such as this,
that they keep everyone ignorant of through hypnosis. Israeli
openly admit to thieving innocent peoples homes, to them
be sent at gun point, to live in a concentration prison
death camp.

http://www.davidduke.com/

/ / ..the Israel Prime Ministerï¿½s speech in which he
actually boasted of his power to order the U.S. President
as one would a dog. \ \ and all American men can't for
some god forsaken reasons, can't for their lives, phone
George Norry to be hung down on. George Noory is a "good
guy" for aiming to go ballistic against every American
who refuses criminal orders to destroy themselves.

Americans Are Welcome In Israel

Obama set to allow Bush-era ï¿½torture flightsï¿½
http://timesofindia.indiatimes.com/Obama_set_to_allow_Bush-era_torture_flights/articleshow
/4067338.cm

What the fuk eh? Doesn't Obama know this
crime warrants death in America according
to the war crime act? Does he believe America
just will never have a chance to speak for the
interests of US as innocent Human beings he is
planning to torture as an enemy to Life?

Refusing to Defend American Values

Yoo: Bush okayed torture to outwit defense lawyers

This is why it warrants the Death sentence. Remember
corporatist Amerikan citizen, these torture victims
that include children as younger than a hundred, had
not been alleged to have ever committed a crime in
their entire lives. Victims tortured to death for the
pleasures of those Satanic, such as General Geoffry
Miller, who tell US today as confidenced, they do it
because, patsy wasted American soldiers will just refuse
to hunt them down for formal executions. Let's change

this for our Humanity in this future, to look back,
and know, American males were men of the World, who
stood for the principles enshrined within every living
Constitution. A free man shall not be jailed, or
tortured by anyone in our names as Governed, without
the perpetrator tried publicly for execution as our
Love of real Justice. As first degree mass murderers
warranted death sentences under the War Crime Act
ushered by Reagan!, all done in for our protections
of their next innocent victim - ourselves. Or
die a death in corporate tyranny worthy the title,
cowardly traitors to God and Liberty. Blackwater,
CACI, AEGIS, KBR and the like will all be hunted to
extinction for refusing to quit their lawless Rape
and mass murder, murders done for more stolen money
as America's name high-jacked. The Lawless enemies
shall be prosecuted by the honorable Soldiers of
the Good old, Red White, and Blue. Count me at
our words on this, I am,

King Johnny

-

Ungodly Israeli Nazi LIARS Continue to Murder Children after "Truce"
http://www.youtube.com/watch?v=-HQO0774lx4&feature=PlayList&p=4199C9262539936D&index=0&pla
ynext=1

A truce means nothing to Hamas?, who states
much of no complaints as in support of Israeli
Nazi lies, why? Have you seen where a blimp is
traveling about five miles an hour, fire bombing
thousands, and none have even a pullet gun, never
mind an Iranian rocket launcher to shoot the Satanic
demons down for God as Love? Why doesn't Hamas
at least admit, like an Israeli General has,
to be funded by Zionists for cash gains paid for
by Zionist Amerika? Why? Why is it that Hamas
suffered near no loses, but all the Cops who
voted who knows, died murder victims trying to
defend our family from Texan child rapists?
Along with thousands of others targeted as
innocent Peoples? Targeted. Why? Nazi Israeli
broke the truce!! THINKTHINKTHINK Demand coverage!
Hamas certainly isn't. ..maybe because they're
illiterates on the Cause of God's Will being
Just?

Bushwhoring Enemies of the American Police

What a demon enemy of life these bushwhore enemies
of American Liberty are eh? No concern whatsoever,
for all the teen soldiers conned to die for those
who committed 911 in NYC. The millions of bombing
victims, the tortures, the rapes of American women,
STILL, TO THIS DAY, left undefended by "the law".
Evil enemy of everyone these demon fuks are. How
difficult is it, to understand the facts they feign
complete blindness on? They WANT to con you as the
coward to life they are, willing to kill America to
make their antiChrist lawless enemy Mr. Bush happy.

From years after the fact still demanding Justice now:
http://groups.google.co.uk/group/alt.military.uk/browse_frm/thread/ca0e34fb32caeb0a?hl=en&
scoring=d&

Huh? "at last been disarmed..." ? How does he figure?
The equation hasn't changed. Example: The same
unaccounted anthrax, (that was disintegrated into ash),
still is not able to be measured as completely accounted
for, (never could be), but this bushwhoring war crime
apologist, tells US, it was only though the lawless
murder of our good friends and family for countless
generations, that he now attests without reason, or
evidence, to find Iraq in "fact" disarmed of it's still
nowhere to be found, weapons of mass destruction. (An
irrational reason he pronounced previous in corporately
broacasted public support of instigating heinous war
crimes against our humanity under the leadership skills
of the evil lying demon antiChrist, our Mr. bush Jr..)

Ron Paul defeats 5 TV 'experts' in 10 minutes
http://www.youtube.com/watch?v=0k92fTDReHg&e

Ron Paul is a traitor. They stole the cash Ron.
And, the Iraq war is a war crime. But Ron, the
Fascist, doesn't want THESE FACTS uttered. Why?
Because wiser men would prevail, wiser men like

me who understand buying in bulk is cheaper. Those like Christ who understand, who KNOW, the banker doesn't cover our loans - so why give them as much as a taxed red penny?, let alone trillions as officially unaccounted for? They are stealing the cash Ron. Ask yourself: Why has Alex Jones forbidden his bushwhore cult from understanding Bush doctored the NIE?, or of iron flowing like water from the towers? Because wiser men would prevail and he can't have that. He called shooting innocent men in the back, an act of liberty. I, an actual god, unlike Alex, lie near never, but maybe to myself when I'm lonely. Alex yes will tell you rapists are free to do what they will in Texas to American children, un-arrested, but he won't mention it when the police chief is with him on air, talking about how he'd like to be exempt from traffic tickets for being so popular. NO MENTION of the rapists walking away without arrests made, no mention of Bush's documented treasons on 911. Where are Alex's priorities? In selling YOU out so he can be wealthy like a bankster?, and have special rights over everyone else that drives drunk, or speeds? a big hero standing over our dead soldiers yelling, I told you so, I told you so, I was right, I was right. Again, understand: It is not by my will to deny open debate with America, it is Alex, and his demon buddy George Noory that denies out Humanity this right. And when people try, like Peggy, or Black men on Jewry, Alex lies cheats and steals our wills for further thefts. Ron Paul's family has millions taken from loyal Alex Jones fans. MILLIONS! Does Ron do commercials with that money highlighting the bushmob's plan to invade Afghanistan, dated two days prior to 911 for Enron? Of course not, wiser men would prevail to expose him as the charlatan charity raider he is regarding Health Care, Social Security, Public Schooling, earmarks.. It is unfair to measure Ron against corporate nazi zionist whores of MSNBC who willing, openly, kill American teen soldiers for criminal neocon gains, as an honorable gentleman's talk. Half honest People like Ron are extremely ignorant on the workings of our world. EXTREMELY. I joke here not. Evil is the deceived disguised - translated - evil people are always dumb.

Corporate America says no, Charlie Manson was a genius, but not, that most Americans are prone too easily to suggestive states where they can be made to believe

anything blindly. Think: what does, "bin Laden did 911"
mean anyway? You should know of what I'm trying
to teach you here. That is how
Alex knowingly or otherwise, steals our rights, by
beating off he knows everything already. And some,
if not most, actually believe him without knowing
squat either. It's sooo easy that way - no study
required!! LIBERTARIAN HELL! Everything is not on
the Internet, where it near should be, but regardless,
a Libertarian can't be bothered to read anyway.
"Free Talk Live" is the best example for this: the
two hosts are unbelievably ignorant on just about
every single subject under the sun, but beat
CONSTANTLY, on how greatly wise they are as drop-outs.
You wouldn't believe any of them when they speak on
Freedom, if you simply understood, an innocent man
does not deserve to be in OUR prisons, or tortured.
Under any circumstances that Obama has excepted for
our excuses. Magna Charta. But in Alex's 'genius' mind,
he doesn't need to actually understand he is a for
sure bigot, (measures another unfairly in a group HE
concocts from blind hate or personal fear - typical
CONSERVATIVE and/or racist) who has no problems with
that at home, or at work. Provable in seconds by
OPEN DEBATE, but Alex ain't gonna take our calls
because, he can't for the lives of every People
person thought of here, admit he could have
something to learn, therefore, the NWO is
unstoppable in his brain washed cult of indifference
to Justice practiced for the benefit of all treated
fairly. Why? He's not wise enough to respect the great
minds of the audience, and I personally believe,
he doesn't even have the good judgment to own
a gun. (I mean, why wouldn't Alex find my stories
of OUR Justice system triumphing by my single hand at least
minimally beneficial to his blind cult followings? to not
hang up on me immediately while spewing lie after lie
on how I'm top secretly a dis-info NWO artist working
for Bush? or whose voice sounds too friendly to trust?
like he has done the last four times I've phoned -
Hey! I can be an asshole if you want - no prob.)
Perhaps it's near because, Alex Jones is blind, and
as such, could actually be found guilty in Texas for
murdering those two innocent black men shot
in the back with his approval to release the murderer
from a RIGHTFUL death sentence prosecution. "law of
Parties". He is a party to the crime, for he worked to
support the release of the FOR SURE, FIRST DEGREE MURDERER.
Sound like an America you could live with? I didn't
think so either. I wanna be Alex's Attorney. Texas is

a State of massive lawless corruption, as dire
incompetence in legal affairs where they OFFICIALLY
plan executions against innocent People not established
to have harboured criminal intent! With Jury Trials!!!!
!!!!!!!!!!!!FINING THEMSELVES GUILTY!!!!!!!!!!!!
While Alex does express murderous criminal intent,
and the Police chief calls him a good man for no
scary pressures. What the fuck is wrong in Texas
where they mess themselves like this regularly?
Imagine, while Bush with the Neocons escape, and
Zionist Israeli target to murder Christian School
girls OFFICIALLY, Alex doesn't want to have to pay
traffic tickets like the rest of US. What a douche bag
to tell he LEADS our Truth movement I say. Now, I'm
not saying he shouldn't contribute with the truths
WE SHARE, far from it, it's just he can't have our
cut off switch to silence our objections to his exposed
foolishness, and/or blatant criminality. I'll give him
a chance, for starters, to criticize any position I take
while we all publically call on ourselves for
assistance internationally. Like on his "buddy",
George Noory, deserving to be tried Publicly for the
traitor he is, and be formally executed after his day
in Court. Our Courts. Teen soldiers have been conned
to die by George Noory for the escape of the neocon
terrorists who committed 911 with Condi, Runsfeld,
Bush, Myers, Tommy Franks, and General Ahmad. AND
HAPPY GEORGE NOORY KNOWS IT - and cons with lies
naked to the ear of any who can listen or hit record.
A NAKED traitor to the cause of Liberty if we ever knew
one regarding the War Crime facts of Iraq. .And
Ian Punnet is an evil godless enemy Bush whore who
lies too to get YOU killed as the innocent soldier
forsaken so don't forget.. It's YOUR life. It's God's
Gift. Now support our rise for popular international
debates to get these Neoconners behind bars
awaiting Public Trials! "Public"thatsoyu!! Get to
the Phone to call someone to care man.. Johnny
Jesus has arrived! Justice Will Be Done in this,
Our Kingdom to Come.

Justice to the war criminals of
indiscriminate warfare would better serve ourselves
to halt for our safety. The bushmob did 911.

1. The ISI's General, Mahmoud Ahmad funded 911's Atta

2. We have video of iron flowing like water from the towers

Humanity Under Attack by the Zionist Enemy of Life

GAZA APPEAL THE BBC & SKY REFUSED TO SHOW
http://www.youtube.com/watch?v=c9kwpxlZorI

Not only that but the BBC argued that to show
innocent Human Beings suffering, in CRITICAL
life threatening need of desperate food and
water that Israeli nazi stole, (because they are
unlawful murderous thieves), would have them look
like they were partial to serving Humanity's
interest in compassion for US humans. Over the
Israeli terror Nazi tactics of indiscriminate
slaughter for more Amerikan welfare. Wicked evil
nazi bastards who too, DO NOT THINK IT BEST to
report Peter Powers committed the London bombing.,
Oh yeah, and mercury is neural toxic, anti-psychotics
make us crazy, and sodium fluoride makes us
stoopider while weakening your body for big cash
surgeries - ultimately leading to a profitable
death for dah' winnahs.. So, they, the BBC-NWOers
just needed to avoid the bath or shower,
humidity, Pepsi's purified bottled water product
lines, koolaids, swimming pools, Jacuzzi, Hot Tub,
Sauna, private Whirl Pools, and.. blh blh blh

/ / the FBI says no.. There is not a thread of
fact a zionist offers to form YOUR own mind in
respect for your rights being equal to ours. \ \

Who is the guy who keeps writing such things,, and
shouldn't he be recognized as Promotional to raise
all spirits towards a better future? I'm with him.

The U.S. Is Required To Bring George W Bush & Donald Rumsfeld Before A
Court! U.N. War Crimes
http://www.youtube.com/watch?v=BRAlqkPbjP0

Olbermann | Bush Years: 8 in 8 Minutes
http://www.truthout.org/011809Z

Bush and Cheney are traitors to the cause of
American Liberty. To leave them free, is to leave
America un-guarded from further transgression.

The bushmob doctored
the NIE. Conned Congress, and Soldiers. Did 911,
by closing criminal FBI investigations immediately.
Alex and George don't seem to want US to know
these FACTS that demand arrests of the culprits
responsible for high treason against Johnny's
America. Alex wants your money, and EVIL George,
our enemy, wants your soul stolen for Satan.

Turley: Obama 'accessory' to war crimes if no prosecution
http://rawstory.com/news/2008/Turley_Obama_accessory_to_war_crimes_0127.html

Understand, Alex Jones doesn't want Justice
for Americans because he loses out to better
men that usher a greater life. He doesn't want
the evidence of George W. Bush made public to
defend American teen soldier's lives. The true
fascist Alex Jones, who in silence supports the
escape of Bush for treason, will fail our true
voice for Justice in our times. WE DO NOT rule
the truth we share equally committed to defend
ourselves from lawlessness. And you'll never
rule my right to speak freely over your intent
to sell us all out for monetary swindles, just
like Ron Paul did. Understand: Ron Paul doesn't
even acknowledge 911 was an inside job, or, that
Bush gave zero evidence to form Your opinion.

Alex Jones, the Slave, told US today that
he challenged Bush for eight years - Bushite
lying nazi traitor. Not only that, but he
also ridiculed those who wish to blame Bush
now for anything! Again, he doesn't want
Justice where bad guys can't steal from
ourselves unrepresented. Ron Paul is a
multi-millioniare, made rich by charitable
aid conned from Alex Jones' NWOers! Alex
Jones doesn't have a problem with that, we
do.

Israel to be Judged - Universal Petition
http://www.tlaxcala.es/reponse_signataires.asp?lg=en&ref_campagne=10&Page=1

The demon LIAR zionist Israeli is a godless enemy
of Humanity, much like everyone at Foxnews, CNN,
BBC, and the CBC. Our revolution against the godless
bushite shills, will not allow our revolution
through speaking honestly, (to become of ourselves
something greater), a chance to be televised for
our benefits. Bush closed criminal investigations
immediately after 911. According to the FBI and
Senator Dashle. CNN says you have no power, Foxnews
says you have no power, the BBC says you have no
power, the CBC, the same, like Alex Jones NWOers...
but well, don't believe it. YOU Do have the Power.

http://www.iran-daily.com/1387/3324/html/east.htm#s359247

/ / International attorneys have filed war crime charges against 15 Israeli political and military officials including Ehud Olmert, Tzipi Livni and Ehud Barak. \ \

-

We must demand open communications to bring back values WE ALL would agree to through polite debate. "Conservatives" don't want this Freedom idea expressed in general terms because, a "conservative" is universally, minimally. a bigot. Why? Life isn't like, their way, - then- all other opinion under the sun on how things actually get done. (Aka "socialist" traffic light repair men, or "liberals" who want to treat The People fairly). Or who we are as equals to our laws fairly practiced. Pay attention to what I am saying here. Liberals can be Dicks with a capital D too of course. But a Hannity couldn't survive 2 minutes with me speaking on his very real treasonous behavior in OUR public arenas. Behavior done to escape the 911 culprits from the long arm of the Law, with his conscious will of criminal deceit exposed, we all learn to better defend ourselves. And Shawn Hannity can't have that for ourselves, he takes too much money from ourselves as talentless by keeping US in the dark dying needlessly for traitors never elected publicly.

Who am I you ask? Johnny Law. at your service. Look me up with usenet to discover, we live in a world of idiots everywhere pretending to be somebody by lying. While I want US all to truly improve our condition by actually understanding how bad off we are by failing to respect ourselves for correction. Too many, know it alls, with not enough to know you need evidence to form a guilty verdict against an accused man or woman. Not according to CNN, CBC, MSNBC, Foxnews and the like however. Let's change this by supporting my challenge for top billing at the Coast to Coast radio show hosting. Look for me coming soon!!

-

Unseen Gaza High Quality: Part 1 of 6
http://www.youtube.com/watch?v=UeezoWRu1FU&eurl=http://whatreallyhappened.com/

Why is it that numerous visits don't change the view count? What is this business of a=a+1, the top secret, I'll go rhythm, that is way beyond our comprehension in it's scientific complexity? For Americans, okay, but the Human species just isn't this dumb.

While Zionists OFFICIALLY target Christian school
girls for mass murder, CNN instead reports that
bushite grunts attacked girls in Afghanistan, posing
as Taliban. I WILL every celeb at CNN to be arrested,
tried and executed for the reporting they have done
today without facts. Remember: the Taliban played no
part on escaping those responsible for 911, and opened
schools for girls, and were brought together on the
single purpose to defend women. Death to CNN reporters
to LIE for killing OUR school girls. I HATE zionist
enemies of Humanity and God I am.

The Torture Ban that Doesn't Ban Torture
http://atheonews.blogspot.com/2009/01/torture-ban-that-doesnt-ban-torture.html

/ / Obama's Executive Order bans some -- not all -- US
officials from torturing but it does not ban any
of them, himself included, from sponsoring torture
overseas. \ \

Is America a nation of Law to Live freedom?
Because this SPECIFIC deviant action of Obama warrants
the death sentence under Reagan's "War Crimes Act".
SPECIFICALLY. Or, is it you falsely believe Obama
can do no wrong against innocent people here, where
an illiterate nazi grunt, maybe from South Africa,
will kidnap YOUR children, and torture them to
death for sadistic pleasure, with as they did using
power tools caught in Iraq, according to Iraqi
government official(s), and several soldiers from
Oregon, all because Obama has given an ILLEGAL!
"excuse" to NOT support following the crime scene
leads at our REAL murder scenes? Again, death to the
bushite dumfuk enemy of God, death to the enemies
of a freeing Humanity striving for a just society.
Obama needs to be arrested for this under the Law
as it stands I'm sorry to say my friends. Why?
Torture is illegal in all 50 states, (as Reagan
directly planned), no matter where you ship the
innocent victim to, or from! Read the War Crimes
Act, then demand Justice today, otherwise, it's
YOUR funeral. Obama wants to secretly torture
Peoples here, while lying to US ALL that he doesn't!
A TRAITOR! Who also wants to give bankers 100s of
billions of dollars more to disappear, that WE pay
for, out our door, never to be seen as our own
again.

Jack Blood interviews Richard Andrew Grove, an AIG insider and
whistleblower
http://video.google.com/videoplay?docid=6546044203900048624

Alive We Say

And Alex Jones gives us the same guy twice
a week that blames the Illuminati, while
encouraging that YOU TOO! can get money
for nothing like the banksters. Just give
the Alex Jones', NWOers, the "truthers" money
money money money. No time for affording the
explanation that the TREASONOUS bushmob
doctored the NIE. That Saddam wasn't in
violation of 1441. That a NEOCON is
identifiable for it's demonic LIES
against God and Man. Never to tell, the
private bankers don't cover OUR loans,
that Bush PERSONALLY worked to close
Police investigations immediately after
911 (obstruction), or that WE have video
of iron flowing like water that PROVES,
without doubt, bin Laden couldn't have
single handedly placed the explosives
in the buildings, or stole the black boxes.
Because someone surely would have spotted
him dragging his dialysis machine what with
all the professionalism of corporate news
media coverage regarding our horribly
suffering worlds. Alex Jones ignores the
treasons of Bush, as a Bushwhore, and
instead, tells US of how Obama is Bush on
steroids. He only wishes. What about
Justice for Americans Alex? Why for do you
forsake ourselves? For money? What about
the lives lost to mass murder, that you
allege to champion OUR TRUTH without saying
much of anything on real Freedom?, on real
Justice like your deviant election rigger,
Ron Paul? Well, no wonder, Alex told US he's
into shooting innocent American People in
the back as a tyrant of evil, a white Devil
if you will. Kids too if you dare look in
his back yard for a copper. See? Now if Alex
doesn't allow US to speak, more and more will
understand to know why. I am a defender of
all that is right and just in this world,
because I don't need to lie like Alex does on
a huge host of issues. I'm more like Jessie
Ventura, in where I don't need/want to lie.

If I end looking foolish, (of which I like never truly am), it's a benefit, because that way, I've learned something. Alex knows everything already, and 'is always right'. Like I say Retarded. You weren't right by not understanding that the banker doesn't cover the loan. One example of easily hundreds. He's a typical, he knows it all, know nothing dumduk American. Hear him on health care speak as Ron Paul does, and know, I defeat them in under ten seconds. TEN SECONDS. This is why he hasn't in years, allowed me to speak more than five or six words. He's rather all America die, than admit he does NOT rule our 'Ocean of Truth'. I want the challenge of opposition through debate to PROVE my skills beyond reproach. Alex, every time, just hangs up on anyone who tries to improve our communications by factually speaking. Why? Because he IS TRULY deeply ignorant on what freedom or Justice means. Why we have law. What a consensus is. Allan Watt is severely disabled in this regard, another Alex Jones favorite. And this is why, Allan can't take calls openly either. He has jerked off with himself too long to quit now learning super basic precepts, for like Alex, he "knows" the inner workings of the 'genius' NWO elites. Not Law 101, not Bush, not Rumsfeld, Not Condi, not Torturers, not bank robbers, rapists, or even petty thieves. Allan Watt isn't a bad guy, he's just a chauvinist pretending he actually knows something, when his real disability is directly related to his absence in understanding understandings. Doubt is a near foreign concept. A challenge for Allan: can you get your 'genius mind' around the fact that Peter Powers did the London bombings, and not the Illuminati of 1463? and if not, why are we so dumb to our present plight that way? Don't get me wrong, Allen has much to offer, it just isn't the issue right now on saving our dying futures. Maybe I was too hard on Allen, he is really actually kinda cool. Alex Jones too has many incredible moments of ecstatic clarity increasing in all they joy of seeking enlightenment. .. Ok - but this is serious business that requires little dilly dally with what we'll have as a side dish in Paradise Lost. We are talking Human Lives have been destroyed by our inaction to remedy these failures to communicate

effectively. and.. Jeeze, the weight of my responsibilities, as just plain John, being a/the Legos Man - for like the Family and everythings, get's me never forgetting, all we got are these words left dormant from the power they truly possess in the minds of the wise asses. And.. here I am. I'm a Talker of Words looking to make a break in the NewZbiZ. Zzzz... Alive We Say! Alive!

King Johnny, from Earth, has come for talks.

-

The Zionist enemy, the most evil nazi sons-of-bitches who openly advocate tyranny and oppression through mass murder of ourselves as the innocent left targeted defenseless. Enemies of Jews everywhere, the Zionist cares not for facts on who's Life it destroys for stolen gain by lying. That's why they target Jews, for fear the Light of Truth would expose them as the Nazis they are.

Hamas doesn't have a military though, so, why not demand the arrests of those who broke the truce, and murdered innocent people indiscriminately, on plans more Jews would die for cash profit? Profit paid for by zionist amerika? - the false imprisoning torture and rape center for Neocon Freedom.

The self-defence defence
http://www.guardian.co.uk/commentisfree/2009/jan/23/israelandthepalestinians-gaza

/ / This has been a central theme of the war in Gaza: not that hundreds of innocent people were killed, not that over 5,000 were horribly injured and not the sky-high human and monetary cost of wrecking homes or razing infrastructure. \ \

Court petitioned to arrest Livni upon arrival in Brussels
http://nawaat.org/portail/2009/01/23/belgian-court-petitioned-to-arrest-livni-upon-arrival-in-brussels/

"We believe there were dozens of IRGC personnel in the Gaza Strip during the war," an Israeli source said. "Some were killed; others went into hiding, and others escaped."

See? the demon enemy of God speaks no evidence as a TRAITOR to every Jew. A terrorist nation that still steals humanitarian aid in

our public realm of left defenselessness. The
false allegation deserves a death sentence
by Jews against the war monger Zionist enemy.
A cause that Iran should champion, if in fact!,
this allegation by OFFICIAL WAR CRIMINALS WHO
TARGET FOR MURDER OUR SCHOOL GIRLS, is on it's
face, unsubstantiated as patently, demonically
false. As typical from any godless Zionist.

Where are the Americans asking for the
formal arrest of Bush for high treason?
Whoring for Alex Jones's contempt for REAL
Justice? The ignorance of all American
talk radio hosts speaks for itself. NO
knowledge on why acts of high treason, are
crimes against every American. The bushmob
doctored the NIE, and Alex doesn't want
Americans to know, because if they did,
they ask, why does Alex do everything he
can to escape those personally responsible
for 911, while then asking for money to
continue his fight against freedom in
America. Again how much money do we have to
pay Ron Paul or Alex Jones before they
will allow the knowledge of the Iraq war
against Human will is criminal? How much?

Obama! feel free to call
on me to help out with a plan for judicial
actions. That offer goes out to everyone in
Palestine, Canada or Britain too. Russia,
let's help out these fools by freely
communicating, what say you? Justice
for all is freedom to be. The Israeli cop
killers must be brought to justice for war
crimes. Those cops, were cops. And I,
am a man.

Alex Jones Rocks!

Now Alex has problems in "my" mind because I am
an ACTUAL genius, and he is generally, an idiot.
Today, he did one of his usual commentaries, however
this time, he was pretty honest with himself, and
his love for Ron Paul. Ron Paul sells incompetence,
and Alex corrected correctly!. that a.. sorry Ron
but these banksters know they're robbing us as
undefended blind men essentially. That's what I'm
talking about!! Look, Ron Paul can be a dumb Ass,
although, he's still not all that bad a guy. A Dumb
guy on things like economics sure, Justice, warfare,

Health Care, Social Security, ect. ect. but still.,
like a child learning of why the sky is funny
blue, isn't all that bad a guy really. He's
certainly not a war criminal, like Bush or
Rumsfeld are. Doing 911 then sanctioning torture.
While Neocons Champion sending illiterate American
teens for death as war criminal. Think about it.
Maybe he is..

-

ï¿½We have all these documents that are now
publicly available that prove that these
methods of interrogation were intentionally
ordered by Rumsfeld,ï¿½

Let us understand. These actions "give" a guy
like Willie Brand "the right" to RANDOMLY kidnap
men, women, or children, and torture them to
death for sadistic pleasure with his faggot
Capt, Christopher Beiring. (I think that's
how it's spelt). But anyway, this is the truth.
A bushite is a godless Zionist whore of Nazi
evil, an enemy of America, who wars YOUR Freedom
with criminal "excuses", for refusing to support
the arrest of those responsible for 911. A
TRAITOR, and could be wannabe rapist, robber, or
911 mastermind ringleader. Torture is illegal,
and warrants the death sentence, according to,
Reagan's "War Crimes Act". Some only suggest,
that this was why someone tried to kill him as
honorable. Death to the torturers of our
innocent families, torture they do without
apology as Zionist Military "Judges". Instead
today, where they get salaries paid in the
billions by the zionist giving nation of,
a-mirror-kay, echem, America. Johnny's America.
A nation where Justice will rule for the favors
of all treated equitably with or without you.
Honor me in company my friend. We have no rivals.

"they do not understand, the private banker
never covers the loan. Never does a private
banker reach into it's pocket to borrow US
to begin with - so as a consequence, the
bankers have just pocketed all the 'free'
loot for nothing, TRILLIONS, and are not
saying why should they help anyone else
up with charity?" Then went on to say, it
wasn't any of our business with what they
did with the money. (But for to cover criminal

fraud in the derivatives market, where
the true value of said commodities were
backed by ZERO capital. ZERO DOLLARS. WORTH
NOTHING. So, think about who's truly giving
it always here until Johnny, the man who
came out of nowhere, arrived to explain
everything in five or six minutes.

Support Johnny America for Coast to Coast
Radio Host!

-

Gaza: 'I watched an Israeli soldier shoot dead my two little girls'
http://www.independent.co.uk/news/world/middle-east/gaza-i-watched-an-israeli-soldier-shoo
t-dead-my-two-little-girls-1452294.html

Getting away with murder as 'God's Chosen' chosen
for death by war crimes trial more like. Death to
the criminal zionist enemies of Humanity. Zionists who
falsely accuse without evidence to respect our rights,
like TV corporated Americans who treasonously LIE,
'bin Laden did 911'. Enemies of Freedom for our
Humanity.

[JEWISH!] Arrest warrant: Ehud Barak
http://www.wanted.org.il/ehud_barak_en.htm

/ / For violations of the Rome Statute
& 4th Geneva Convention \ \

They are murdering Cops

2-Bombings target house of Abu Ubaida El Jarah,
Police Director in Sheikh Ridwan area.

3-Airstrike targeting Al Zaytoun police station.

Nazi Israeli are murdering Police Officers,
and the families that live in the areas near
them as once defended from criminals.

It's like saying, every Cop in America deserves
a death sentence by thousand pound radio-active
waste based uranium/plutonium war shells because
Bush stole the election, then committed 911 with
the Neoconned Partners of Public Crimes, Cheney,
Rumsfeld, Condi with General Ahmad and Myers. Now,
I ask all Cops, does that make sense to you as
still remaining silent? You can be a man too, why
don't we all just give it a try. To the Telephone
Robin! Israeli are attacking prisoners held
criminally in their own Death Camps!! GET ALEX
JONES ON THIS! and.... the ADL! er.. JDL.. er..

let US join forces for the common good of all,
as so we will benefit everyone. That means
Justice for all, especially the Taliban for
defending American Freedom by demanding evidence
to form a conclusion of capital accusation,
regarding an unsolved case of mass murder.
Taliban blamed it on concern for life draining,
!AMERICAN ENTERTAINMENT TV! sports, weather,
Music, and news about some, who knows war we are
committed to now die you for, for better or worse,
of mass death and suffering against innocent
Peoples all for glorious Neocon tyranny of inter
national private banker IMF enslavement plans!
in some far off distant places. America! I am
King Johnny.. I am from the Planet Earth, I've
come to share the knowledge of Justice in our
times on behalf of this, Our Future Great
Triumph over Evil. We come in Peace with
a sword for War Mongers, and a choice for
'lawless' grunts of ungodly action against
Life as we live it. Targeting school kids
deserves death sentences, don't you think this
value is what every soldier should hold proud
with Johnny in America? In Israel? In
Everywhere?

Chief Israeli Nazi Rabbi "All civilians living in
Gaza are collectively guilty for Kassam attacks"

ï¿½In spite of rising the blue flag of UNRWA on
our schools, the Israeli army has been targeting
those schools by missiles and tanks shells.ï¿½

U.N. special rapporteur on torture calls on U.S. to prosecute Bush and
Rumsfeld.

[SATANIC ENEMY] Israeli warplanes attack Gaza during Truse
http://www.presstv.ir/detail.aspx?id=83073&sectionid=351020202

Satanic Enemies of Humanity Kill 8 Yr Old Girl During Fake 'Ceasefire'
http://uruknet.info/?p=m50983&hd=&size=1&l=e

A MEMORANDUM OF UNDERSTANDING TO KILL MORE
http://desertpeace.wordpress.com/2009/01/20/a-memorandum-of-understanding-to-kill-more-pal
estinians/

/ / Dr. Condi was very smart when she declared
at the outset of the most brutal Israeli war on
Gaza that it was the Palestinian side which
is held responsible for violating the six
-month truce. \ \

She lies, Innocent Christians die.

Nazi argues it's good to get killed Jews by
breaking truces with prison camp.

They shoot Peoples indiscriminately telling US
that's how evil they are to argue it's Your
fault though.

This post was passed to near everyone in our Secret
Service defending Obama. Let US demand Justice for
the Victims of 911, by warranting for the arrest of
every Neocon Nazi Zionist pirate of OUR Jewish faith
for Public trial on LYING for War Crimes against
our dying Humanity. War Crimes against God.

A ZIONIST LIAR'S TRUCE

/ / live images of an Israeli helicopter hovering
above the city and dropping its white phosphorous
bombs on the city \ \

Again, the Zionist deserves to die by public trial
today to defend the Jewish faith. Look at usenet.
These demonic enemies go, 'yeah, Hamas broke the
truce', they do it to kill you. To steal the lives
of innocent Peoples to profit off our deaths as
victim.

Zionists are Satanic Demon Liars of Satan

FIGHTBACK

/ / Israeli forces demolished the house of the
Sammouni family in Gaza City after ordering
them to remain in it for safety. \ \

Palestinian Children found with bullets lodged in their head
http://jnoubiyeh.blogspot.com/2009/01/palestinian-children-found-with-bullets.html

/ / Israeli officials continued to deny on Saturday
that their soldiers had deliberately targeted
civilians, \ \

The Zionist is an
enemy to the God of Love and Justice, of Beauty, and
Children. A zionist LIES with a hatred unmatched in
Satanic hatred for the survival of our species. I
beg you, hunt to bill the zionist war criminal who
charges we will not succeed to see every last war
criminal on this planet hunted down to complete
extinction, by public trial, then Jewish firing
squads. The Zionist has bombed US, The People
indiscriminately with out cause. It was Nazi
Israeli that broke the truce to get killed

Jews for money. They starve Jews in Israel
to attract more charitable aid they can use
elsewhere. They, as Nazis, will continue to
murder Jews for money unless WE DEMAND, their
formal trials and public executions. They have
murdered our families, and they will pay will
their lives for it as the directly responsible,
and in no way, will escape our rages against
them as the enemies of every Human Being
Living for Freedom. Every Human that loves
children. They HAVE ADMITTED to targeting the school
girls for murder with lies they were caught
doing. THEY DON'T GIVE YOU EVIDENCE. And when we
get the facts, it's near always exactly the same
thing: they steal our Homes, they STEAL our
lives. God calls the Zionist Jew Enemy of
the Synagogue to Satan!!

"We also need a massive overhaul in Our news channel
prioritizing, including to add censorship free, open line
public communications. Done to gain value in learning from
the art of conversations. We need still to appreciate the
values of a free society where Justice is above all, the
measure of our success to communicate openly."

The Ungodly Murder of Innocent Men by Israeli Nazis
http://atheonews.blogspot.com/2009/01/summary-execution-in-southern-west-bank.html

/ / At noon an Israeli military jeep with four
soldiers entered Tameiziï¿½s land. After 15
minutes the man was thrown, blindfolded and
still handcuffed, into the back of the jeep. \ \

Let us not lose the focus of fact, that these
people of ourselves live in a concentration,
prison death camp, robbed of everything.
in Curfew near anywhere in "peace time". And
still, to this day, do Nazi Israeli CONTINUE
TO THIEVE the Homes of god loving folks in the
region, guilty of no crime but to have been
born into such brutal ungodly oppression
against Civilization. And to see, face no TV
opposition as American tax payers continuing
to fund such war crimes in our absent names,
is a crime on to ourselves if allowed to go
unchallenged. Johnny for Coast to Coast radio
host. Free the Slaves! Free the Slaves!

Binding U.S. law requires prosecutions for those who authorize torture

The ugly secret of Barak and Livni, the truth about the Gaza rockets
http://www.youtube.com/watch?v=8rqDzXeA-PQ&feature=channel_page

[HEY WHAT THE.. THE LINK IS GONE ABOUT GODLESS
ZIONISTS MURDERING JEWS IN ISRAEL FOR MONEY!]

See my Jewish friends, these zionist liars
will never escape our love for Truth in this
our new age. Killing Jews for money is as
evil as found, negligently criminal, agreed?
Agreed.

Gaza: lives in ruins
http://www.youtube.com/watch?v=OFWxEtWcT8w

'Ungodly Enemies of Life is the only way
to describe it from here Tom. They again,
are attacking People indiscriminately for
murder as sadistic Satanic enemies of God'

Someone should ask what King Johnny, The
King of the Jews has to say on this subject
of a Zionist's complete absence of morality,
as inhumanly bereft any common decency among
our brothers and sisters. I mean for Christ's
sake Tom, THEY ADMIT to sadistically
targeting our children for MURDER - as some
kinda Satanic demon whore to Pure Evil - aka.
Wanted War Criminals for Public Trial. Just
as the Nazis were for similar outrages. Let's
hope men of America are least half they were
then, but we are suspecting, they will as of
usual, balk as cowardly slaves to the private
banker man ruling their minds, it's a, no
wonder. Where is there that purpose striving
for a greater future living in a just society?
Where is the Christ in their Christianity?
to financially support the arming of such
unlawful Zionist killings in silence against
Innocent Christians?

Free Radio International Broadcasts Alive!

Johnny Justice for Coast to Coast radio host.

BBC argues with Israeli Spokesman over UN School Bombing
http://www.youtube.com/watch?v=VPGP1xWEkkk

Where is the evidence to form any person's
verdict, if none is offered as in respect
for yourself as worthy the title of free
men? I ask as your self? Or are you as
the cowards of most in the American military
who refuse to speak for the arrest of those

who did US wrong on 911.?

For the Popular Will?

Alex Thomson shuts-up Israeli spokesman!
http://uk.youtube.com/watch?v=zIQZ1-RFq6A

Wow. The demon LIAR will also say Hammas broke the truce, and Israeli started this by stealing innocent peoples homes, then imprisoning ourselves, the victims, in a death camp for indiscriminate slaughter. While they continue to STEAL OUR CHARITY by breaking truces. What is it that YOU can't picture?

"The view from the other side, that the Qassams are a retaliation for the siege that starves the one and a half million inhabitants of the Gaza Strip, [a prison death camp,] was not mentioned at all."

Masada legend galvanises Israel
http://news.bbc.co.uk/2/hi/middle_east/7830416.stm

/ / they committed collective suicide - men killing their own families, afterwards each other, until one [evil zionist liar] remained to kill himself. \ \

ISRAELI IS A THIEF WHO CAN'T SPEAK OPENLY IN DEFENSE OF OURSELVES IN OTHER WORDS? That is right. They, as documented criminal, lose every debate personally since before the dawn of Civilization because their position is clearly unsound. They are criminals who murder People in hate for a freed Humanity. They OFFICIALLY steal Peoples homes in that country didn't you know they proudly proclaim it so? And steal humanitarian aid from starving children. Targeted to murder children specifically as publicly confessed, 'it is Hamas WE blame', not them as demonic child murderers. Hideously evil as ungodly sadistic savages. Enemies of YOU, enemies of them, and enemies of me, the King of Jews Christ fellow from beyond the grave. They are so evil to God and Man, they tarnish everyone of US to not win justice sooner by blaming the actual bad guys. Justice is Freedom.

/ / Those white phosphorus shells used on the Gazans are made in the USA according to Jane's Defense. \ \

Again, these peoples are not Jews. Being Jewish is a religion. These thieves of God are Satanic in their LIES to betray the common trust in our words, that bind all worlds to victory, called freedom universal. Even tales of the Devil have him keep his word, with verses specifically condemning the self to damnation for targeting the innocent for death. God's the Word. Every word inside a fool's paradise. Including the periods. Not as like, I'm playing a word game, but that it in wonder, is all strangely here. Example: The Universe as it has existed always, is not separate from our 'pauses', or faulty drawn conclusions. The universe, in one sense, was as good as anytime, created 6000 years ago. AS TOO 50 billion. You say, impossible, I say no, study quantum physics, and know, I live this.. our existence is not scientifically separate from the timeless nature of consciousness, proven as not only theoretical, but actual. That is a first step at developing a REAL relationship with the living Universe if you want to as like an artist does - that TOO! can be just as thought static in it's orderly constructions for Atheists. (An Atheist is still mostly a fool here however.) Overall, for any, it's sorta simple: Life has left YOU in charge of YOUR fate. Now, do well to make something of this being as eternal Life reaching for balance, as your body does, and good cops do when bringing the bushmobsters to Justice. By Israeli calling for more murder against the innocent of your mind as racists and bigots they are openly, is still shadows of YOUR mind, YOUR WORLD.. get it, got it? God is in genius to set Life as this, as like, nowhere existing, but for as yourself within. Will you speak out for the Justice denied Humanity?, or not you? Atheists can be Just too!, but generally lose it on not understanding the intelligence of order is way beyond what they dream up with assumptions. All anyone has to do is ask themselves, who do you mean "God"? Atheists are ridiculous!, but, to each his or her own, we are on a path here, believe what

you want to believe. This is not a faith
initiative I'm bringing by keeping this real,
I DEMAND JUSTICE BY OUR WILL BE DONE.

A zionist cabal of criminal pirates who murder
Jews around the world for stolen money is
seriously evil as criminal. What do you think?
Let US have a open line discussion on this
indivisible matter of rights to all as equals
before who ever we proclaim, I AM.

I mean you right? Say it with me... "I" "AM"
we are good to go.

-

George Galloway "The West has DOUBLE STANDARDS when it comes to
Israel"
http://www.youtube.com/watch?v=IIpvrOJQ0J0&eurl=http://whatreallyhappened.com/

ï¿½Main actions: Israel targets hospitals, United
Nations premises, Press offices, theaters and densely
populated buildings in west of Gaza. Additionally,
people are being used as human shieldsï¿½

A Zionist Nazi Being

See? A zionist Nazi argues it's good to get killed
Jews by breaking truces with a prison death camp,
cause look at all the free American Welfare money
we can steal through kicking-back AIPAC members in
Congress.

-

Harper complicit in Israeli war crimes
http://onlinejournal.com/artman/publish/article_4246.shtml

Canadians! Please war with words for open line
calls on the war crime enemy propagandist,
The Chorus Radio Network. CJOB STEALS millions
from Manitoba each year, and refuses all calls
for honesty in governing. They are actual
CRIMINALS.

Canadians Stand Alone
http://www.thestar.com/article/569872

Harper the proven war criminal
who will be going to prison, is the only person
on Earth that has publicly okayed Israeli Nazi
to target murder Christian school girls. Canada,
join me in demanding Harper's Public trial as a
war criminal. Prison for Harper who took a

honorable soldier who stated he refused to commit
war crimes against innocent civilians, and placed
him without trial in prison. Without warrant for
arrest. Harper, the Nazi Appeaser, is a War
Criminal standing against the Queen.

"Or is this another, popular amerikan past time,
of, who cares for the facts, we are at war with
God and Christ now?" Die bushite die Christ always
says against lawless torturers as mass murdering
thieves of Humanity.

shreveport man gets 15 years for stealing $100.00
http://wesawthat.blogspot.com/2009/01/shreveport-man-gets-15-years-for.html

Again, Americans need to demand the arrest
of the Judge and prosecutor for being openly
evil demons, as TRUE enemies to freedom in
America. But guess what? Americans will refuse
to even phone Alex Jones, or George Noory
to be hung up on. Just refuse as brain dead
zombies - as known in this circle, McCainiacs.
Did you hear Alex's NWOer yesterday state he
doesn't want anyone to speak as Justice for
Americans because to learn even the most basic
of precepts for Justice, he can't pretend he is
a Freedom Fighter begging US for more money?
Like multi-millionaire Ron Paul, who gave the
fixed election up to take our money and walk
away. How much money in the millions do we have
to pay them at GCN, before they will acknowledge
the Iraq war is a war crime? THEY NEVER WILL,
because the faggot owner has a son who's into
raping American women as lawless enemy of Life.
Americans are indeed, selfish, like all the plane
crash survivors telling US how they couldn't care
less that Israeli nazis are openly targeting our
Christian children for murder with their tax
money, as unimportant, to how long they stood on
a plane wing, now approaching it's third day, of
wall to wall coverage. Telling us again of how
Christ saved your life as a lifeless degenerate.
I, as Christ, am really starting to hate all
Americans in total now. How difficult is it to
pick up their phones? They don't, and I'm beginning
to believe it's because, like GCN, they really
don't care for the future of our Humanity being
left for dead as continuing victims to EVIL liars.

Nazi Israel Broke Ceasefire as Satanic:
The Bush Administration and The New York Times v. Amnesty

International
http://uruknet.info/?p=m50870&hd=&size=1&l=e

UN sites shelled with WPh after GPS coordinates given

Livini was reported to say today that, 'every
innocent person targeted by Israeli, as such
driving in ANY car, or on ANY bike, or walking
down the street as then directly murdered, Hamas
will be blamed for. Heil Hitler' Well, I made
that last part up, but do you have the ears to hear
the screams for mercy given by Humanity?, while
this, the evilest of JEW KILLERS in the known
universe, (targeted, and murdered countless Jews
in Lebanon as one example), believes no man or
woman living can speak directly against her wanting
to MURDER even more as ungodly... 'Until the tin
can rockets stop falling on Jews' standing in their
detention centers, or living at the garbage dump
BUT.... THEY BROKE THE TRUCE! THEY BROKE THE TRUCE.
They will rob and kill US all my INNOCENT friends
as LIAR Satanic if you, YES YOU continue to refuse
to support my/our demands for OPEN COMMUNICATIONS
for Justice ourselves. Johnny Dazzler for Coast
to Coast Radio Host!

'Secretary General outraged at shelling of UN building in Gaza'

"I conveyed my strong protest"

Not good enough. Public War crime charges warranting
Death by Jewish firing squad, is what is demanded of
our Humanity. Death to the zionists liar war criminal
enemies of Humanity, instead of US, who they target
for mass murder.

Google have attacked US again as Evil doers..
They have again destroyed my writing with war
criminal intent to deny these truths as men they
could never face me, because they are not. They
STEAL our voices.

They are jewish criminals, not criminals because they are Jewish.

HERE IS WHAT GOOGLE IS:

"End the illegal Human occupation of Jewish land in Gaza!"
http://stoptheism.com/

HUMAN

These war criminals need to be arrested for Murdering
LIES against the lives of every innocent Christian
and Jew. Godless zionist nazi bastards are as evil

as they are dumb. Get every man who defends freedom
truly to hunt down these satanic demon ENEMIES for
thee True Jewish Cause, to ask it why it lies as an
enemy to HUMANITY, to murder innocent others as
evil doing thief to Freedom. A thief of Jews
everywhere to know truly God as Love and Justice.
Not only will Americans celebrate these neocon criminal's
freedom to call for the murder of innocent Christians,
as he does without arrest, "Americans" too, will as
Satanic refuse to hunt the ungodly enemy of the Jewish
faith down as Nazi hunters. No, Americans, cowardly, are
committed to dying with the Nazi Elite, as such
to escape of the Neocon terrorists who participated
in the mass murder of America for more stolen money
as war criminals.

THESE ARE SERIOUS WAR CRIMES

Israeli soldiers say they have OK to KILL Innocent People
http://www.mcclatchydc.com/251/story/59704.html

Israelis 'shot at fleeing Gazans'
http://news.bbc.co.uk/2/hi/middle_east/7828536.stm

They'll murder anyone human to steal our homes.

-

We battle injustice by demanding the public
arrest, and trial for execution of proven
war criminals. Now, who disagrees?

Israeli using Palestinian Kids as Human Shields
http://uk.youtube.com/watch?v=rXq57XK2L0A

Israeli Soldiers using Palestinians as Human Shields
http://uk.youtube.com/watch?v=FjEd4hJNVCE

Why do you as an American, refuse to contribute
to Just cause?

These monster enemies of Hillel are inhuman
to their prisoners, prisoners who had their
homes stolen and are denied freedom for being
born to Nazi tyranny. Demand Justice for
yourself as a Human.

Some Serious Evil Jarg in Dishonest Reporting
http://www.aish.com/jewlariousMultiMedia/jewlariousMultiMediaDefault/Israel_Unfair_and_Unb
alanced.asp

Forgetting about the truce given to those in
a concentration prison camp? Where they are denied
food and water? In curfew prior to near half the

days of the year, for years? How could they not
to claim such self righteousness? They don't bother
because they'd rather YOU were made innocent victim,
then them, Zionists who would screw you out of a house
called home. Did you know: they openly steal Peoples
homes in that criminal nazi state labeled godly?
Of whom openly thieve? Officially? Yes, and they try
to thieve the title of Jew from the Messiah too,
but I'm not going to a slave prison death camp
for innocent humans, I'm fighting back to demand
open communications to rule true Justice concerned.
Freedom is paramount. 911 perpetrators will be
brought to Justice by King of Jews Johnny Dazzler.

-

Israeli Murders Officer to make it look better

israel-fakes-rocket-fire-fatalities-in
http://stevenwarran.blogspot.com/2009/01/israel-fakes-rocket-fire-fatalities-in.html

/ / And we may assume that he was a non-Jewish
member of the IDF, given [...] \ \

Lawless evil doing for neocon lying criminals
really sucks man. Our friends are dying murder
victims. They are robbing our humanity of common
decency.

Neocon Enemies of the Jew do not Care for Truth

ElBaradei says Iranï¿½s nuclear program is legal: report
http://www.tehrantimes.com/index_View.asp?code=184534

But Neocon enemies of the Jew do not care for Truth.
They lie as enemies to God, on hopes to murder Jews
like they did in Lebanon with millions of land mines.
What kind of "Human" would commit such crimes against
Life? Cheating Liars for Satan Johnny tells YOU.

When Bush asked about his errors in judgement:

/ / you know, could I have done something
differently, like land Air Force One
either in New Orleans or Baton Rouge. \ \

Would have been better PR he means? Likely.
He walks away looking good, your family is
dead, or dying due to criminal neglect for
cash profit. Did I tell you that the private
bankers don't even cover our loans yet?
Trillions given by Americans, now Obama is
asking for more to disappear. THEY DON'T
even tell US what they've done with the

eight trillion already taken. Desperately,
Life Begs, THINK ABOUT THAT. King Johnny
for Coast to Coast radio host.

/ / So what is Ron Paul saying about Ron Paul?
I'd wager, he doesn't know himself, and fears
like FOXNEWS from open debate \ \

Excellent! if I do say so myself.

-

The Queen Shall side with The Great Nation

You can not hand over a prisoner for the crime
of refusing to commit a war crime. Otherwise,
YOU'D be a war criminal like now Harper is.
A Zionist appeaser. The government of Canada
already decided on this issue, and the vote was
137 Patriot to 110 neoconned bushite dumfuk.
The Iraq War is a war crime. These be demons
that steal our democratic voices, by denying
freedom from a man who's capital offense, is
that he tried to be fair for all parties. See?
War criminals.

The Queen Shall side with The Great Nation of
Canada Vs. S. Harper on this. Ask her.

God Bless the Queen.

-

/ / destroying Hamas terror infrastructure \ \

As Satanic, they TARGET TO MURDER Christian
School girls, and claim, none on Earth will demand
their public trials for executions as War Crimes
against God, because to the Satanist LIAR, (and
many "American" "Christians") God doesn't exist
within YOU to demand Justice for our Times.
YOU change that.

Evil on Parade

43,000 FoxNews Zionists in America, sign petition
in YOUR INNOCENT BLOOD calling for censorship of
Gaza conflict across all America

http://www.iraq-war.ru/article/186735

Stressing that Israel was "the first to stand
up against pure evil." [See? A zionist Nazi argues
it's good to get killed Jews by breaking truces
with a prison death camp, cause look at all the

free American Welfare money we can steal through
kicking-back AIPAC members in Congress.]

"I demand that the use of images and headlines
that misrepresent current events to the detriment
of the State of Israel be stopped immediately,"
the petition went on. [and the 'judge' judges
anything detrimental misrepresents the constant
LYING nature of the Nazi Zionist thieving pirates
of the Jewish Faith?]

This is detrimental to Zionist war criminals
because it exposes their TRUE EVIL NATURE..

Israeli Forced to Admit in League with Satan
http://uk.youtube.com/watch?v=zfFMZ7Y-s_c

Israeli forced to admitting, it lied as a demon
enemy of Life about tin can rockets falling
into the head of a good Jew, prior to the
Neocon LIAR's ungodly criminal attack for
senseless war against Humanity in the region.
When Jews die, these Zionists really take
everything like bandits., Peace where smarter
People speak freely for Justice? not so good.

Breakdown Dead Ahead
http://www.youtube.com/watch?v=yFCnVC2C8As&feature=related

-

Simple Common Sense for Mankind

/ / Israel has admitted HAMAS kept the cease
fire; and that Israel broke it, then unleashed a
total starvation blockade on Gaza followed by
flaming death from the sky aimed at schools,
hospitals, ambulances, and children, and you
dare call the people opposed to such barbarity
a "mob?" \ \

Zionists are evil people who pretend they
are honest, when lying directly to everyone.
Blitzer reports Hammas broke the truce, he
is lying to continue the murder of innocent
peoples. Understand: Israeli Nazi state they

will continue to murder our innocent Humanity
until the rockets stop falling on Jews. Yet,
they broke the truce, and murder Jews routinely
with reckless abandon. Jews from the Bible as
of "nigger" Ethiopian, are what the Zionist
hate when warring GOD for apartheid, apartheid
that is Humanity in Gaza. A zionist is a war
criminal who speaks not against the neocon,
but against Innocent Humanity as YOUR enemy.

Livni: Gaza truce would give Hamas legitimacy

As they always do because they are dishonorable
murderous nazi thieves of God as Just cause is.
I am, and YOU are, you just maybe don't know it
yet, or if ever. A zionist serves Satan to escape
the neocon terrorists from their ungodly crimes
on 911.

http://desertpeace.wordpress.com/2009/01/12/gazatoon-of-the-day-blaming-the-victim/

Ron Paul:
US Will Be Rightly Blamed for Israeli Killings
http://www.youtube.com/watch?v=6C756NOPyDA

Not the Nazi Israeli?

The guilty party are those who advocate these
mass murderers of innocent peoples with
deliberate lies, like from Blitzer. Blitzer
will be tried, and executed a war criminal
for stating Hamas broke the truce., Where,
only two minutes earlier, he learned, that
it was his Nazi partners. DEATH SENTENCE.
It was on TV. BUT SEE? Ron Paul, the Libertarian,
ain't going to be honest here. He'll lie cheat
and steal Humanity's voice for Justice - like
he did with OUR money. A typical Libertarian
like Alex Jones who wants to blame "socialists",
"Liberals", aka, all of innocent America.
Blitzer is war criminal, who makes his own
discussions. As is Ron. What an enemy to not
mention the truce. THINK: IT IS THE ISSUE. But
Ron plays the dummy to kill more with contempt
for Freedom. Ron Paul, the bigot, asked,
'should we be doing this'? SEE? it's not first
degree mass murders, no, according to Ron Paul,
it's argumentative that indiscriminate mass
killing is a good thing really. Remember,
Ron Paul does not support arresting those
who committed mass murder on 911 either.
Or those who STOLE TRILLIONS. Or lawless Bush,

the ACTUAL AntiChrist enemy of God. Ron Paul
will watch America die for a stolen dollar.
And Alex Jones will refuse all calls to label
him good guy like himself warring order
to our universe for it.

Israel is [NOT?] responsible for these childrens death
http://uk.youtube.com/watch?v=Y9PIZQqIep4&feature=email

Ron Paul "When we pick sides, we make it worse"

He also took our millions donated for freedom
fighting away for his family, but not our own
as dying innocent victims giving. Pick a side.

Remember: Sadistic authoritarian George Noory
is a very real DEMON of Satan, who again,
openly tells US, he wants to murder our
species as the innocent forsaken, and Alex
Jones doesn't hear a problem with that
either. Love the bushite blindly, and
they'll kill US for a dollar sukka.

Alex Jones is like the retarded brother we
can't help but love because we're human. He
is still retarded. And George Noory is still
seriously evil as a traitor to the cause of
Freedom in America. And Ron Paul is still
slamming Ron Paul.

Ron Paul "Israel can not act without
Washington's approval"

So, it is Ron's fault then by not mentioning
the truce?, or as that, innocent People are being
indiscriminately murdered in a death camp that
he figures is argumentative? that innocent
People are dying as targeted for mass genocide?
Or is it the Ron who states YOU are to blame
instead of himself for being there, not saying
anything? HEY RON! Can you hear me now!

-

Contribute to our rise for the popular will

Alex Thomson shuts-up Israeli spokesman!
http://uk.youtube.com/watch?v=zIQZ1-RFq6A

Wow. The demon LIAR will also say Hammas broke
the truce, and Israeli started this by stealing
innocent peoples homes, then imprisoning
ourselves, the victims, in a death camp for
indiscriminate slaughter. While they STEAL OUR

CHARITY. What is it that YOU can't picture?

Hi. My name is King Johnny.

TALK IN AMERICA
http://www.mediafire.com/?mxw3nzi4nzf

-

/ / The targeting of civilians, whether
by Hamas or Israel, is a war crime. \ \

They are targeted by Obama who suggests
there is an argument to be made here. There
isn't. Nazi Israeli DEMON LIARS broke the
truce to kill Jews for money. They are godless
enemies of Humanity. So it isn't that we are
pro-Palestinian, it is that we are pro-Human.
Zionists DESERVE to die, before US, the innocent,
they target for murder for stolen cash gain.
Like Obama has promised to do for AIPAC. But
what about the rest of US 6 billion plus Obama?
Who is it of US innocent folks do you wish to
MURDER, or torture next as a Zionist war criminal
for Satan Obama? Torturing kids is popular in
Israel, tell US Obama, which American father will
have his children tortured, or murdered
sadistically by yourself as a whore for Nazi
Israeli? tell us, we're not waiting.

The Chosen Bad Example

Zionists Destroy Our Homes as Satanic
http://www.youtube.com/watch?v=mo2HW4T7wK4&feature=related

When I see the women and her child, left outside
while they sadistically destroy her meager gains,
I grow weary with ourselves for not speaking right.
Nazi Israeli are committed to deny US our God given
rights as Innocent persons to speak freely for Justice
realized. All because they STEAL our Lives for monetary
gain. It is our reality, give it or take it, YOU LOSE.

Then.. Hammurabi founded Civilization.

I go concerned for any hesitations of condemnation by
Obama. It's like, he's talking some jive about
how now he'll NOT let the words of Hamas reach
his ears. Being against war criminals, doesn't make
you pro-Hamas, necessarily, it means your against
war crimes to defend the lives of ourselves respected.
Remember: He told US earlier during the campaign that
he wouldn't fear speaking to anyone, Hamas especially,

because he was confident he could win the discussion on Liberty, by principles that unite all free men. Now, he has promised the FBI's Most Wanted AIPAC, he will pretend to not hear any calls for fairness as all parties united by common cause. Johnny Who? Where did you go Obama? You were here, then.. pooof! you vanished into the loving shackles of convicted/ing criminals is a mass, "WE ARE TRAITORS TO JUST CAUSE" organized war crime outfit, dedicated to deceiving the Public by lying. I am not Lying. I'm not saying I hold his associations as a measure of himself, I am concerned with him stating, he will not hear our cries for Justice, as then AIPAC cheered. I was as freaked out about it as you maybe yourself now, believing it as possible. Check it out for yourself, and wonder, just "who" is this person they tell us they're are going to take for as dying fools? I mean look at what happened to what's his name, when he sided similarly the same in error as hugely criminal? Come on be honest with us son, "Are you on drugs?". Maybe he's just been stressed with all of everything he is heaped to follow on, NOT to know by Blitzer, that Israeli broke the truce to kill more Jews for money, and, also STEAL innocent Peoples Homes while saying, "they are God's Chosen". Yeah, chosen for, "The Bad Example", of how Jews are left undefended by these grave robbing war criminal nazi forces. As the King of Jews, I call for Public War Crimes trials of the entire bushmob as terrorists, and their supporters for lawless tyranny.

People are Coming to Town. Justice for All Coast to Coast radio broadcasts all, until we have secured the neocons in a prison cell awaiting the treason trials.

We are Good to Go. Rise Up for innocent Life, or don't and see where it'll get you in the end.

TALK IN AMERICA
http://www.mediafire.com/?mxw3nzi4nzf

Nazi Israeli STEAL Peoples Homes without apology, as a function of their SATANIC government, while collectively bombing the INNOCENT victims who die because of it.

Gaza 2009 - Operation Cast Lead
http://www.youtube.com/watch?v=hFEiOfLUfzY

Again, they are Satanic here because they THREAT to tell you, yeah, Zionists are casting the leads for the real mass murder scenes - Justice denied Humanity. God doesn't exist to defend yourselves

from war criminals for Satan.

War crimes trials with public executions
will commence against ever GUILTY zionist
living to lie that Hamas broke the truce,
that Georgia was attacked without provocation,
(again, CNN are not 'accidentally' conning
US here). And trials for every last living
bushite bomber, rapist, and torturer -
death to the bushite, the true traitors who
war against freedom for America, traitors who
war Innocent Humanity for the escape of the
neocon zionists.

-

Both parties cheerlead loudly for Israel's war Against Humanity
http://www.salon.com/opinion/greenwald/2009/01/08/israel/index.html

Death sentences MUST be willed by Christians for war crimes.
Death to the bushite, death to the enemies of God and Man.

-

For the Great Truths. We Stand United

/ / This option is also regarded
as a non-runner as the US would certainly veto that
suggestion. \ \

No no no no. What you do is investigate who this
the "US" person is as the GUILTY party my friends.
The facts have spoken for ourselves without contention.
And while we're at it, try to figure who that "Army
says.." person is too, we need to know who these
traitors are who hide their names backing war crimes
to continue. The Enemies of Civility, they are
enemies of US all my innocent friends, enemies of US
all.

white phosphorus shells on Gaza
http://www.youtube.com/watch?v=HPY2M6IxDRA&feature=related
listen to the inflection of voice near the end of this..
the mind of a delinquent 7 or 8 year old.. This phenomenon
is pervasive, and illustrates some cognizant short coming in
Calcium or Zinc somethings. However, IT IS THERE. Normally, as
an Expert on Psychiatry, I dismiss the whole notion of
Psychiatry as I intimately know it as pure bunk wacky,
however the study of something here is needed if we're
ever going to convince ourselves dying indiscriminately
this way sucks. As the innocent for profit we pay for,
with lies sold without Public defense of mass murdering
demon traitors to the cause of US falling victims. God

says their Satanic, I just say they are criminals. War criminals easily convicted for murdering our loved families. They have no remorse for all that have been murdered already.. Livini should be on her knees begging our forgiveness, but she's not because she couldn't care less for any Jews, especially those she don't have imprisoned under threat in Israeli 'society'.

It's a 'bad' thing. nnNo.

Israel bomb attack Gaza Civils Palestinians 27/12/2008 launches missile attacks on 27 Dec 08
http://www.youtube.com/watch?v=tQLDBujnwEE&feature=related

This was what Israeli did as a legitimate murder scene, committed after the Nazi Israeli Jew HATERS broke the truce. More dead Jews, more money to be rich with. and we'll blame it on that God nonsense. We must demand war crimes trials from Obama, and everyone else down there who is appalled at this indiscriminate mass murder continuing in your name. We need arrests of Zionist infiltrators within the American military who have been shipping weapons to nazi Israeli to murder more defenseless innocent People as targeted. Obama must demand death sentences against these ungodly Zionist vermins for treason, warranting execution for the war crimes of accessory to mass murder, or genocide. For the Great Truths. We Stand United.

-

Here on a Mission

/ / after dropping leaflets warning residents it was about to "escalate" its offensive against Hamas. \ \

SEE! This is AFTER fire bombing the whole community. Satanic evil enemies of Life. Who admit to targeting any one who has ever so much as swept our streets, warranting bombs dropped on their Block(s). SEE! they are ENEMIES OF EVERYONE. EVERY LAST ONE OF US. INCLUDING GOD.

Riddle me Dumb

Hamas Workers and/or Troops? Out hiding in the mountains of Afghanistan you mean right? Satanic enemies of all Humanity I tell you. The most evil nazi sons-of-bitches who openly advocate tyranny and oppression through mass murder of ourselves as the innocent left targeted defenseless. Enemies of Jews everywhere, the Zionist cares not for facts on who's Life it destroys for stolen

gain by lying. That's why they target Jews, for fear the
Light of Truth would expose them as the Nazis they are.
It's a prison death camp, brought about by Israeli STEALING
OUR Homes as ungodly thieves. Thieves who leave a Jew
to starve to death in a garbage dump because, it'll
attract more charitable aid The Zionist can use
elsewhere. It's not a Jewish thing, it's a criminal
matter. They STEAL innocent Peoples Homes in that
country. God's Country? God would will such criminal
offense? Which God? Not the God of Abraham, nor by
the teachings of Hillel, Christ, Mohammad, or
Confusion? So which absent God do you speak where WE
can't speak as ourselves openly for Just Cause?
Cat got your tongue? How come your not saying anything?
The Israeli Zionist ENEMY wants US ALL in slave
labor prison death camps silenced away that's why!

Israeli War Crimes
http://bothwell.typepad.com/whos_your_nanny/2009/01/israeli-war-crimes.html

Well, maybe I'm wronger on Ron Paul than I needed to.
Hey, don't you EVER forget, I am a man also. We need
to meet on common grounds, to demand the start of
formal arrests for the bushmob crimes of 911, Iraq,
Afghanistan, South Osettia, and Palestine, as a group
together united by agreement for this one cause, and
then... we can later argue about how your ideas are
better than mine because I actually know of which
your speaking.. Hey! you could call me Daddio if you
wanted! To the telephones we go.

-

Israeli are attacking prisoners held criminally
in their own Death Camps!! GET ALEX JONES ON THIS!

Hmm... why wouldn't Alex? to support his fictions
over Our Rights to Live Free perhaps? A Hero adapting
to the deaths scene?, or, a Bush whore committed to
enslaving Humanity, all so he can say, he told US so.
Big hero or big hero. Your NOT powerless to his vision
of complete control over information. He refuses 911
info, Iraq war info, Israeli info. All so he doesn't
have to look the fool, while Humanity dies with his
insults against our wills to make something better
of ourselves. Justice is what I will. Masturbate on
your own time Mr. Alex Jones.

If he states again about how he knows everything,
and is always right, and those that criticize
him on ANYTHING are delusional, it's going about to
make everyone further sick with this obscene take on

what life means as Alex takes it. If I truly state
two nickels make a dime, does that mean therefor
they make a quarter also? If I say so like Alex
would? He is an idiot. Truly. George Noory figures
Hamas broke the truce, and that the Mideast solution
is that Jews should be separated with special rights,
as oppressors over the freedom of every Palestinian
Prisoner, and what's Alex Jones gonna say about
his 'truth telling freedom fighter' George to actual
'lame ass evil nazi traitor' George?, to YOU about
how George is just trying to murder millions of
helpless people as an offer for the final solution?
We can expect Alex now to claim, Zionists should
have special rights over Jews, all to maintain
his FICTIONS on Noory being anything but the
monster to Humanity he is. Just because Noory
doesn't growl when talking about murdering all
children in around the age of 15, or against
soldiers who refuse criminal orders, does still
make him a true fascist nazi enemy laughing at
your murderers escaping to live freedom in
our dying forsaken worlds. The bushmob doctored
the NIE. Conned Congress, and Soldiers. Did 911,
by closing criminal FBI investigations immediately.
Alex and George don't seem to want US to know
these FACTS that demands arrests of the culprits
responsible for high treason against Johnny's
America. Now, who's with yourself. I am! I am!
I am!

Alex Jones doesn't know squat of Social Security, but
pretends he does, like Ron Paul does when speaking
of the Federal Reserve, Health Care, IMF, World Bank
blahblahblah.. I mean even the expert of experts
Alex has on near twice a week, EVERY WEEK, to talk
all about how the Illuminati are doing everything,(give
me your money now for whatever), DOESN'T SAY TO KNOW,
it was Chris Cox who changed Investment Banker rules,
to cover instead one tenth of WORLD INCOME loans,
to one twentieth. MORE THAN DOUBLING THE ENTIRE GLOBAL
MARKET FOR LOOTING WITH HIS SIGNATURE! (And. that isn't
even a fifth of the TRUE trillions dollar fraud story.!)
Now, granted, I wouldn't expect one tenth of one percent
of America to have even a distant clue of which I am
speaking, but importantly, Alex's expert of experts has
never mentioned it. EVER. Why? He don't give a fuck, but
how much money he can get you to give him for investing
in things that are un-important to our struggles, but
for the fact, he states, you'll get free money for
nothing!! OUR ACTUAL PROBLEM. It reminds me of those

Ron Paul dollars... where Ron'll fix everything, cause we, as a private company, are going to make YOUR money instead... holy fuk mon.. Talk about the kettle calling American racists. Thank God the FBI stepped in. (The answer unfortunately is not nowhere as easy as Alex would blindly lead you) - again, so I guess it will be, Americans were just too far gone as illiterate chauvinists, who cared too little for your freedom as themselves degenerating. Why? To battle tyranny they knew not Justice wins the day, and blamed innocent groups gathered wherever, instead of following the crime scene leads at the real murder scenes - like was once done on TV and at the Movies. But even that was too far above their doped down heads, to raise their finger to dial a phone number.

How about stating "A lawless bushite enemy wars America as a traitor, to escape the neocons from the crimes of 911."

Then Alex states the head of GCN is giving out gold at less than it's value as a special treat, every second or third week. Below wholesale. Now, really think this thru. Do you think Alex is trying to con you here? you bet. That is the Gold Racket. Diamonds are another thing - where I've personally seen, about a decade ago, a huge press that makes Diamonds out of coal. Swear to God it's true. Costs to make diamonds are pennies to the thousands paid to Zionists who live in Israel calling for the murder of all innocent Peoples. Where is the rich Zionist, grave robbing Jew hater to demand Justice for our times? Where? Pressing coal into diamonds, while advocating the murder of our entire Human species. THEY WANT TO KILL GOD AS SATANIC ENEMIES OF LIFE. While I am last known to Life's enemies as Jesus Christ, the Zionist's end every time. I'll have brought more Zionists to their rightful dooms, than any other, of any time, anywhere. I HATE Zionist bushite LIARS to death, all because I Love Humanity too much, to watch US die undefended as the innocent forsaken. They can change their evil ways, but till now, often not, benefiting off our suffering as war criminals who simply lie as demons to steal our Human values. Let's change this for our betterments. I mean the Halo is a dead give away..

The head of GCN has a son warring God to rape American women as lawless enemy in Iraq for the Neocon - again NEVER mentioned as something worth fighting against for Freedom in America - soldiers are suppose to REFUSE criminal orders - but not when Alex is at the mike.

He will never mention the Bushmob doctoring the NIE to con America for death as exampled, because it doesn't fit his fictions, where all the bad guys escape because they are geniuses headed by secrets so powerful, nobody can ever know'em, except Alex. He tells us near every day, he knows everything already, and is never wrong, therefore you can't criticize him. Bullshit. It's like he wants to be wise like Johnny Gawd is, without doing anything like studying for a test where the teacher actually does know the issues. He told US today, the British came up with concentration camps, from the Indians - who spent all their lives murdering themselves. The British 'invented' false imprisonment? The British came up with the, Jews Killed Jesus? The British invented Pope Gregory VII? I suppose Alex has never heard of Ghettos. SEE? he just pulls shit out of his ass, and calls it like it's truly pure gold you'd wanna buy. Those, like your typical American have no clues, so they figure, Life must be sorta so that History is all one big Alex Jones NWO cartoon. What? that the NWO did 911, and everything else that use to instead, require criminal investigations to nab the actual evil doers? Alex Jones IS the NWO he tells US all we should be concerned about never stopping, like it was in the DARK AGES. Justice Alex, why is that hard for you as a "Conservative" to figure? Is it because you are cowardly in the face of true Liberty? Afraid that some People, on some Issues, ACTUALLY know a great deal better than you could even imagine presently? Don't like that do you?, where you don't rule this Universe as a lawless tyrant desperate to live in an illusion at the expense of everyone else dying victims to censorship? Does he try to find wise men or women? rarely. "Ron Paul [MUST] leads our truth movement" - like, fuck off already with the Ron Paul, The Truther, Bullshit Alex Jones. 1% is what YOU get on Social Security deposits - 1%. And.. Bush stole 700 billion. 700. Billion. That's 700 BILLION. It's a "Trust" account. A "Trust" Account. It's being held in "Trust" Alex. Ron Paul is asleep at the wheel. As, so are the rest of all you other fools.. I want Justice, and I want it now for all the victims of 911. Americans be damned, we want Justice, and We want it Now.

In Texas, child rapists are given the right to freely move about without fear that Texans will stand as armed Men in defense of their very own offspring. And Alex wants this for the rest of America. That some

how to own a gun, means an American would kill a cop
who beat a women near to death for pleasures that
he could never be Publicly arrested for, as a
sadistically evil nazi bushite fuck. Look, if YOU DID
kill that particular DEMON COP after the Chief
refused to arrest him, you couldn't possibly go to
jail in Johnny's America, because the truth would win
out in a fair verdict. And REAL cops would honor you
with great big, thank you. Nothing worse than a
cop (or bushite grunter) who believes the Law doesn't
apply to him while he drives drunk, tazers someone for
nothing, abuses Women, or kids, to sell drugs, or
kills good cops, who are good men. (Like mercs do in
Iraq officially for Rumsfeld's P2OG. Coming to an
American city near you!)

Again, the two Laws of Johnny:

1. No evidence, person innocent.

2. Torture? fuk you and die then

"Rice says it is 'hard' for Israel to spare civilians in Gaza"

We KNOW they are ONLY targeting innocent People,
the ungodly zionist Satanic enemies say so..

"Israel Rejected Hamas Cease-Fire Offer in December"

Livni has declared her country "is not going to show restraint"

"Her" country?

It's like she's admitting here, that they DO NOT
target the IDF's Hamas, but only our innocent lives
as a threat to LIFE and GOD. Remember: the Zionist
LIARS broke the truce.

THIS NAZI ZIONIST FUCK BREATHES THE AIR OF US
http://www.youtube.com/watch?v=lMxfEsooM5M&NR=1

/ / So, Hamas decides it's time to end the
cease fire and has begun shelling Israel again. \ \

This guy even sounds like the Satanic false
accusing enemy of God he is. Let US, as Humanity,
hunt these real devils down, try them, and have
them executed publicly for the benefit of God and
Man. Understand: this REAL DEMON knows he's lying,
no living man on Earth could spew the vile lies he
does to excuse indiscriminate mass murder, or starvation,
as this Zionist enemy of life sells to STEAL Your
HOME, your Family, YOUR LIFE. An open enemy of God
trying to STEAL the Title of Jew from Christ. EVIL

ENEMY OF LIFE. See, when a bushite dies, you served Life well in defending their next INNOCENT target. BILL HIM FOR STATING ISRAEL WAS STRUCK THOUSANDS OF TIMES. BILL HIM FOR STATING HAMAS BROKE THE TRUCE. BILL HIM FOR STATING bin Laden DID 911. BILL ANY Zionist FOR THIS TREASONOUS LIE. Why God asks? Because there isn't any evidence to support that Satanic lie. According to the FBI. And according to God, Zionists are not Jews, but of Satan as enemies of every life form in this Galaxy, Hunt him down, and bill him today for the love of God. You can 'hear' it in his voice.. how he lies TO YOU as a DEMON of a Hatred for Truth and Humanity. Facts, that are easily available, are not what he works to mislead others, others he hates, and wishes to murder for as ungodly sadistic pleasures as YOUR enemy. Bill him under American law for being pro-torture too while we're at it. Death to bushite, death to the murdering enemies of God's Love for Mankind, and enemies of TRUE Justice for Americans. The fuking demon enemy lies to you, as a con to STEAL your life, or just as soon, the life of another innocent other. Now, what are you going to do about it? Except his lies as exceptable, as he tries his hardest blatantly LYING to kill God and Justice in our Worlds? Not in mine, but perhaps Yours.

' In Civil-Contempt Cases, Jail Time Can Stretch On for Years for Americans, without Ever seeing a day in Court. '

Where are the arrests?, then firing squads for the Judges who 'judged' such criminality against freedom for US, the Peoples in America?

' Where Did Taxpayer Money Go? Panel Slams Treasury [FOR STILL REFUSING TO SAY] '

Where are the arrests?, they stole eight trillion and counting.. And Congress 'slams' them for disappearing OUR MONEY. Slams with what?, a, don't do that again please butt sqeeze? It should be massive slammer time, with a return of all STOLEN monies.

' THEREFORE, those pro-Israel politicians in Congress won their seats in part using stolen money. '

Where are the arrests? Amerikan bushite nazi grunts are assisting in the mass murder of innocent Christians in Palestine. War crimes demanding death sentences. It isn't an argument that can be turned around. Nazi Israeli

STEAL Peoples Homes without apology, as a function of
their SATANIC government, while colectively bombing the
INNOCENT victims who die because of it. It's a prison
camp! they are denied water, food, shelter.. since four
or five truces over that they've broken, every one. These
are Satanic enemies, willing War Crimes against God,
a God NOT loved by zionist American Nazis. And a Son
as powerful as the four winds, ridiculed by Zionists,
and American know nothings, for the continued debasement
of YOUR soul worth here dying.

Israel Attacks Iran News Station

Why does not Iran DEMAND arrests, and death sentences
for these blatant war crimes against Humanity committed
by Amerikan Nazi Israeli Zionists? Along with the
perpetrators of 911? WHYWHYWHYWHY. Russians! Can you
help US out?

-

THE NAZIS SHELLED THE HOUSE WHERE THEY HELD
INNOCENT CHRISTIAN PRISONERS
http://uruknet.info/?p=m50596&hd=&size=1&l=e

Rise up for Justice American Christian, or
die innocent victim the Son of God does say.

-

Pictures of Alex Jones masturbating
"we were right about it all."

It's the NWO! The Illuminati! Not Bush, Cheney,
Neocons Gone Wild, or any of many other REAL
criminals, for the war criminals are just
puppets to his EVIL fictions. Forget about
Bush escaping.. Socialists who design traffic
lights, and Liberals who will to share fairly are
Alex's enemy, because he's fearful the FACTS
would escape his denouncements against truth
tellers. George Noory, one of the most despicable
individuals on the face of our great Earth
- is exactly the kinda guy he wants returned
to send his wannabe Patriots nowhere but to die.
What about Justice America? The bushmob doctored
the NIE. TREASON. There is video of iron flowing
like water from the towers, seconds prior to
the collapse. Alex ain't there to help US, for
that is where TRUE Patriots fight for real
Justice. When WE phone with indisputable facts,
on Ron Paul the bush whore sell-out for example,
he lies to all (GOD), then hangs up on US. Is

that the kinda freedom you think the Founding Fathers had in mind to give Your rights to speak for Alex who blames anyone but the criminals directly responsible for your funeral? The private banker never covers our loans, so why give them trillions without questions offered without answered as, never mentioned by the guy who is 'right all along on everything under the sun', and.. he 'rules the Ocean of truth' too don't you know YOU have a steak going all rotten to hell here also? You'd think Alex would take our call just for the challenge on where we stand? I'm free!

He is not. And George Noory tells us openly, he's into killing innocent kids for profit. George's profit is that apparently, by murdering all children in around the age of 15, will stop them from getting a clue at anytime in the future, to take him out as an ENEMY of EVERYONE for censoring our cries for Justice. Why is it that Alex would invite obstructionist, Steve Quail, or Alan Watt, on to lead you nowhere while they jerk off, but where we gotta go to actually defend ourselves? Steve has been on with Noory more than a hundred times, and, we'd figure, Alex will soon be delving into the Alien questions also. Answerable by me in seconds, but ahhh.. like Noory, doesn't want the truth of such a subject uttered, just endless streams of illiterate bushite dumfuk losers sucking on each other. While they wrest from US the wonder; just why we can't stop criminals from robbing ourselves, while murdering our families? Alex wants to blame the unstoppable NWO, while I, want to blame those actually responsible, like Bush and the proven treasonous, Neocon terorist liars who are pro-torture. With arrest warrants. All of them. I'll do it for Reagan's, War Crimes Act, as an act of respect for my Great America, that's isn't always been dying dead wrong under the leaderships of criminals.

Israel hits Gaza after UN truce resolution

/ / AP Israel and Hamas responded to a UN peace demand by hammering away at each other with bombs \ \

The IDF's Hamas is hammering away with what at who? Is the AP referring to the tin can rockets that travel usually several miles, but in one case,

22 miles? To kill a Jew standing outside in his
yard, thinking on how he would defeat true evil in
his time? Tin can rockets that contain no explosive
charge? Have no mistake, if it hits you in the head,
your dead, but really, what do you think the odds
are on that? E=mcï¿½. Or is this another, amerikan
past time, of, who cares for the facts, we are at
war with God and Christ now? Joe is an American Zionist
"Plumber", who has amassed a multi-million dollar
fortune in the competitive industry by shit eating.
Every bushite death is a mercy given to God in defense
of all that is right and Just in this Universe. A
lawless bushite enemy wars America as a traitor to
escape the neocons from the crimes of 911.

1. The ISI's General, Mahmoud Ahmad funded 911's Atta

2. We have video of iron flowing like water from the towers

-

Traitors to the Cause

Bush and Cheney are traitors to the cause of
American Liberty. To leave them free, is to leave
America un-guarded from further transgression.

UN: Israel Admits Claims About Attacked School Baseless

US military re-supplying Israel with ammunition through Greece

House and Senate Compete To See Who Can be Most Pro-Israel

This warrants the Death Sentence to Republicans
who have committed America to these war crimes
- DEATH SENTENCES. Christ DEMANDS these trials
to start tonight on America's Coast to Coast
radio program. It's called first degree mass
murder.

Israel broke the truce on Nov. 4th, yet state they
will continue to murder Humanity indiscriminately
until a truce can be found that they will break,
as always, Being the Satanic enemies of God and Man
according to the Bible:

The Bible "I know the blasphemy of them which say
they are Jews, and are not, but are the synagogue of
Satan."

/ / UN Call for investigation into shelling of
Civilian shelter \ \

Investigate that evil does exist in the thieving
LIAR name of godless Zionism? The enemies of God
and Jews everywhere?

-

Freedom Granted by Americans for Neocon Liberators

"Americans are having their heads velcroed to chairs
and forced to take in nutritional supplements by a
tube forcibly inserted through their noses by US guards."

These are People not charged with any criminal
offense don't forget. Die bushite die you know is
what I recommend, as does Reagan. A dead bushite
means you've saved the life of their next victim,
an Innocent Human Being guilty of no crimes. The
war criminal enemy is the bushite, the Zionist,
the LIAR neocon traitor to Life as this Universe,
along with every dumfuk grunt who serves tyranny
for the bushmob at Guantanamo, Iraq, or Afghanistan.
It is a soldier's oath to obey lawful orders only,
but Cheney they don't take out with American Law -
how come? cowardly fascist nazi whores for Zionism's
evil as the ungodly that's why. Cowards dying for

the escape of the Neocons from the 911 scene as
reported publicly. - Vs. US. That's we whoever
you are.

Widespread Suffering and Death
http://www.youtube.com/watch?v=gVdee2iXSVk&feature=related

Notice no one shoots at the blimp fire bombing the
entire neighborhoods. And if it's phosphorous, that
smoke is already deadly toxic. That is why it warrants
the Death Sentence under International Law when used
against OUR Humanity, as the most evil of Nazi War
Crimes ever. The neoCON LIARS are the LIARS conning
you here on our TVs and Radio dramas, in where, they
don't want to openly take our public calls for real
Justice. Bush and Cheney are traitors to the cause of
American Liberty. To leave them free, is to leave
America un-guarded from further transgression. So,
them being "puppets" is even all the reason more to
insist in their capture for trial by Jury. A Public
Jury of our Peers. Now, who's in with You? You can
count me in. and I bet willed to action, we will find
others to be something of ourselves too.. Justice
and Liberty for All. Equal rights given is what true
freedom is as measured. Translated from the 'Alien'
dialectic to Amereeze jank vibe; where is the fucking
evidence here Neocon traitors who false accuse to lead
us off the straight and narrow? It leads to Bush,
Cheney, Rumsfeld, and Condi that's why I figure, you
figure, they figure, we figure, so... what are WE
going to do about this sacrificing for godless tyranny
further then as unrepresented?

Gaza Mosque Struck as Targeted by Israel Air Force 1 Jan. 2009
(Why so you may wonder they've had this string going
now where a secondary something, then there! that proves
something absolutely apparently, without the intellect
to fairly judge anything, particularly themselves honestly
as dishonorable thieves and murderers, targeting prisoners
held hostage to their own camps. Death camps. Nazis are
they.

Israel Attacks Jews,
Silence from Mainstream about Violation of Law
http://www.youtube.com/watch?v=K1kt8qi0M-M

They kill Jews for money. They bombed Jews in Lebanon
for money. They want to bomb the HUGE sacred Jewish
communities in Iran.. wonder why? Zionists are not
Jews, for Jews don't steal in God's good name. Nor
target innocent beings for stolen gains. A zionist is
a thief to life, and as such, needs to be formally
charged for their criminal offenses, given lawyers,
and upon a successful prosecution, rot in a prison
cell and/or pay restitutions. YES. why? so not another
innocent person must fall in their place as next
victim to a zionist's public commitment to lawless
tyranny for evil intentions.

Israel Phones 'Terrorists' Before they Bomb Homes
http://www.youtube.com/watch?v=K5wrwZlwAq8&feature=channel

Didn't the Nazis say something like, they weren't
there to take out Hamas directly? Well, after all,
it was founded by the Zionist IDF, so I guess that
must be why they target our children instead..

UN: "Israel knew they were bombing a school"
http://uk.youtube.com/watch?v=uWP0GU0wVSk

/ / The hospital, and other smaller hospitals and
clinics were previously shelled by the Israeli
warplanes and tanks, stressed Hassanein. He
also denied Israeli claims that medicine and
medical supplies had arrived to Gaza hospitals. \ \

The Zionist is a thief of Life as our enemy.

IDF VLOG UPDATE: IDF Hits Dozens of Hamas Terrorists
- Capt. Benjamin Rutland - 4 Jan. 2009
http://www.youtube.com/watch?v=q9Jt-pV5wuM&feature=related

This Zionist enemy of God speaks like a six year old.
"Hamas Terrorists", "4. Jan.", come on now, how evil
do you have to be to believe this ungodly demon sells

you righteousness. They STEAL our food. They are OUR criminal enemies who torture innocent Peoples. A godless criminal enemy who also steals Peoples Homes. And drops millions of land mines to murder Jews indiscriminately for decades. Commits war crime after war crime against Humanity. Vile bile.

They killed our innocents, and unless we kill theirs, they will go on killing ours.ï¿½

It is the crime of which they demand WE are outraged against. Welcome to Humanity's suffering world due to lacking communications skill. The term "they" are referring to is YOU. Your innocent life Israeli intend TO STEAL, TO MURDER, TO ROB YOU Your rights here granted by God. These are ungodly acts of mass murder, perpetrated by enemies of Life. They targeted a UN Girl School for Christ's sakes. please fight back by supporting my calls for open international dialog. Justice must win our Freedoms back, for there is no other lazy TV'ed ass, pop a pill to make it all go away, plan 'b'. Look at me! I'm not crazhey! We can handle this no prob.. I'm a perfect King for these times of wonder and horror. equal rights are found through open communications for a measured Justice we do contain. Evil is the deceived disguised. And i am a god... on a mission.. Ladies?

-

The Appropriate Response To Islamic Terror
http://revisionistreview.blogspot.com/2008/12/judaic-columnist-urges-kill-muslims.html

/ / an Orthodox Jewish Russian immigrant \ \

Let US never forget, the Zionists also would bomb some locations, then later, drop the warnings for the Jews to run for their lives. Didn't warn them though if they get into a car or truck they would be destroyed instantly by the Zionist flying the America paid for Apache. I did a big show of shows through that continued as, more 'un-resolved' crime scenes perpetrated by the treasonous, neocon Zionist terror merchants. It's like they think some dying fools are going to keep going to save'em in the end from ourselves as still suffering in Justice denied as enslaving into ungodly tyranny eh? These Zionists are not only the bad guys, but they're bad guys to even the bad guys as there is no found honor among murderous thieves. A Zionist will kill a Zionist for a stolen nickel, as do bushites today. Hey! it's only Your Life in the balance. Or are you one of those

who goes in America, it's okay, we're only murdering
innocent folks who don't live in Israel.

Doing what's right and just, or evil as dumb is
Your riddle. Get back to US on that.

We need People are Equals Power!

President and CEO of Shareware Earth Co.
King Johnny Wizard at your service me Lord.

-

/ / It is just unacceptable to apply two standards of
morality, one for Jews and another for non-Jews.
For if what Israel is doing in Gaza is right, as
Israel and her supporters maintain, then what the
Nazis did in Europe several decades ago must have
been right as well. And vice versa. \ \

The ungodly zionist enemies, are enemies of
God and Man. Don't think the NAZI Zionist like
Bolton doesn't know this, with his friends at
FoxNews.They WANT to rape, murder, and pillage
America all her freedoms for the bounties of
private banker frauds. The banker does not
ever cover our loans, we do. So, why give them
trillions of American worker waged dollars for
nothing?. THEY DON'T COVER LOANS. See? that is
what this war against God is all about. People
of Humanity just seem to truly hate a guy like
US as wise and Just. See, people hate US, because
they can't for their lives disagree with Facts.
Why won't YOU support these same rights and
champion our demands for open communications.
Johnny for Coast to Coast radio host.

US Again Stops UN Call for Gaza Truce

Who is this the "US" person?, and let's
put him to death with Bolton and Kalilazad
for the most serious of war crimes against
OUR Humanity. Remember, Bolton was NEVER
confirmed because, the Zionist could find
no man or woman to say a single kind thing
about him. FACT.

CNN: The Nazis Broke The Ceasefire!
http://www.youtube.com/watch?v=KntmpoRXFX4

Protest pictures from around the world (not on CNN)
http://www.rys2sense.com/anti-neocons/viewtopic.php?f=11&t=16496&start=0

Remember Israeli nazis to this day, insist as DEMONIC LIARS, Hamas broke the truce - as Hamas is responsible when they target school girls for slaughter. They said the UN were secretly attacking Jews, clearly a LIE as impossible to prove because it didn't happen. But facts are the furthest thing away from the godless false accuser Zionist con man or demon witch LIAR like Livini. FoxNews calls the demon witch a Jew! ANTISEMITES.

We can witness, Americans do not have the intellect to understand what this means. See, LIAR Nazi Israeli broke the truce to get killed Jews for money. A regular fair for Nazi Israeli. Now, they state they will continue to indiscriminately murder humanity until the tin can rockets that travel miles stop killing Jews who hate Zionists. But importantly, it is Israel that wants Jews to die, so they can make off as Satanic with our stolen values. Just like the Bush family did with Hitler, that the Nazi Nation has no probs working gun in hand to wipe out Jews everywhere still to this day. Again, Nazi Israeli MURDERED JEWS in Lebanon as targeted. And leave Jews to starve to Death in Israel for more charitable aid they can use elsewhere. Public knowledge not disputed by any living soul on this planet because, the Zionist government admits freely to this. Israeli think being Satanic is worth it, for all the money and lives they can steal as enemies to Christ, Hillel, Mohammad, YOU, blahblahblah.

And, as demonic thieves, they steal homes from innocent god loving folks. US. But see the McCainiac HATES you as being a virtuous man or women, so they call for more indiscriminate carnage against Humanity, on failed hopes, that we as God are not going to come down to hunt them to the ends of this earth, try them, and have them executed for the war crimes of Torture, Rape, and mass murders committed for the neocons escape of 911.

Joe the Plumber to cover Gaza op

/ / Wurzelbacher says he'll spend 10 days covering the fighting and explaining why Israeli forces are mounting attacks against Hamas. \ \

Don't want an intellectual who might have a clue of what is transpiring with the forces of Satan, fuk, CNN'll likely hire him also. Don't you just hate this treasonous lying nazi demon? He has no journey man's license, never did, isn't a plumber, and doesn't have the millions of dollars he claimed

he did to purchase a company that would have rolled over 250,000.00 a year for himself alone plumbing. Plumbers, as good as the job is, never generate that kind of money. Who cares though, right? A Nazi liar is what Zionist's want, and that is what America gets. TV'ed Americans couldn't care much less. Evil nazi McCainiac who's sworn existence, is to con teen soldiers for death to raise the fortunes on the un-elected Neocon bushmobsters now fancies himself a teacher on the struggles against evil. It's like that faggot at anotheruntoldstory.com, who's into murdering innocent Gays, while fucking his own brothers up the ass, who runs ads everyday at GCN, tells US now, all about how evil we all are for demanding Justice. How long do you think that'll run with the Alex Jones towners still raising no concerns? It's for the money as Ron Paul would say.. Again, it is to divide ourselves from true liberty, by demonizing the innocent on our radio and tv channels. Instead of Bush, Cheney, Rumsfeld, and Condi.

http://www.liveleak.com/view?i=ab0_1231290043

http://www.kuwaittimes.net/upload/img_pict/headline9637e7.jpg

Read of the bushite in my America who call this work of Satanic enemies, a good thing they support to war terrorism for the sadistically evil liars of the neocon. Then KNOW my friends, a bushite is the enemy of every living soul on this planet. Have no love for those in the Air Force, the enemies of Man who bomb our families without excuse, but to know, they hate US as Christ to speak free for Humanity. That DEMON George Noory was so happy last night about all the good the bankers AND CHENEY are doing for their hatred they spoke of for all Russians. SEE? not to protect America, but to kill you with their true commitment to the demonization of innocent people, all to escape the neocon terrorists. I HATE George Noory more than anyone alive in America. He is so openly evil to ourselves, that only those who wished to lie to you, (like Alex Jones does about Ron Paul), would say otherwise as bushite dumfuk enemies. Cowards committed to escaping Bush and Cheney for treason against Freedom. They doctored the NIE on Iraq, highest of war criminality. Alex Jones has never mentioned it, but for MAYBE in passing. Hey because all the bad guys are just puppets to ignore over the elites, globalists, socialists, liberals, gays maybe, Blacks, Mexicans, and anybody else smarter than NWOer Alex. Ron Paul is a coward as rarely if never has a clue of which he is speaking on.

Israeli PM says to end offensive if Gaza ends rocket attacks

Sarkozy urges Syria to press Hamas for Gaza truce

How does the ungodly get away with this obscenity?
Nobody can deny Nazi Israeli broke the truce, as
they always have done as Satanic for the last 60
years. Killing Jews for money is popular with the
Zionist Nazis don't you know us by now? FoxNews CONNED
Americans for DEATH with the unmentioned, TREASONOUS
doctoring of the NIE. To kill Americans for more
neocon gains, which Alex Jones never mentions either.
Do Americans even care enough to raise Humanity's
call? Do they demand public executions of sadistic
godless Zionist torturers? as the Standing Law of
America - The War Crimes Act - brought to be
by Reagan - DEMANDS by the Law of America? It is the
Law after all, yet, CNN, CBC, and FoxNews calls the
perpetrators of the most heinous evil against Mankind,
heroes. America is
a nation of godless cowards willing to die murdering
innocent Christians in Israel, all for the profits
of the 'magical' zionistic private bankers. Bushite
grunts are now supporting the indiscriminate carnage,
serving as police services forbidding any of the
prisoners in Gaza from fleeing the indiscriminate
slaughter. Again, as Satanic, they don't arrest the
"Suspects", for what could they truly charge them
with?, no instead demand we die helpless murder
victims by forbidding escape, as they did in Fallujah
murdering more than three hundred thousand innocent
souls. Die bushite die screams to all men on Earth
from the Son of God. Will you stand for YOUR life
as truly worth something here? Like lawless enemies
Policing your reality will bring you more happiness
and prosperity with the great truth teller HAPPY
George Noory? The demon who openly confesses the
will to want to murder all children in around the
age of 15? Too crazy for you to face such an enemy
of huge demonic origin, so, go the cowardly way
like Alex Jones as sell out slave instead, to cover
the demon with endless praise on his treachery to
not have our fight on everyday with open calls for
understanding Justice is freedom. Instead of a
constant stream of bushite dumfuk enemies of Living.
This isn't complicated. Or it doesn't have to be.

Israeli nazis state they will murder humanity
indiscriminately until rockets stop falling on
their country. Yet, they broke the truce.

Alex Jones told US as a deceiver, he's been
on Coast to Coast a hundred times. Not in these
last eight years he hasn't. I demand Alex prove
this, or be known by all far and wide a treasonous
liar, trying to take US off the tracking of
criminal action of his buddy, the demonic enemy
LIAR George Noory. bin Laden didn't do 911,
despite the facts that WE KNOW George Noory
knows better of but LIES to con the American
teen further for death at the profits of the
un-elected bushmob. See Alex wants you to blame
anyone but those directly involved in the crimes
of 911, or Iraq, or those responsible for it's
cover-up by Zionist propaganda. George Noory will
have as invited guests whos only function there
is to spread dis info as supporting more
indiscriminate warfare for the escape of the
neocon terrorists responsible for starting the
illegal wars to begin US at. Or those whom often
support torture, a war crime that only exists as
irrationally held by those who's minds have only
a blind hate for the indivisible rights of
another innocent other. And often truly hate men
and women for being Just as wise. The McCainiac
Zombie video is a perfect example. When the Zombie
is asked about the rights of Women, the McCainiac
Zombie cried out for raping more Women. The
position of authoritarian power, was only found
with the bushite as oppressor, rapist, torturer,
or Air Force Bomber, not liberation by freedom.
The bushite McCainiac KNOWS it can't compete
openly to defend it's criminal treasonous
actions! Remember, Alex "the Conservative"
thought McCain was the choice if you had to make
one, earlier on, then changed his position,
sort of, later by calling them all puppets not
worth the effort, but .. Obama's idea's matter
not, it's that his Birth Certificate is, no war
too be fawned. Palin? who's she? McCain
firebombed Vietnam as "war hero" for France?
The Banker doesn't cover our loans? Matters
little.

Norwegian doctor: Israel intentionally targeting civilians
http://rawstory.com/news/2008/Norwegian_doctor_in_Gaza_Israel_targeting_0105.html

"All that is happening in Gaza here now is against
international law, it is against humanity and I
think it is against what it means to be a decent
person. You don't treat other people like this.
Even if you disagree with himï¿½ maybe even if you
fight with them, you don't treat civilians, children

and women like this."

Israel deliberately targeting civilians in Gaza
http://www.youtube.com/watch?v=Ev6ojm62qwA

It was almost acknowledged on CBC radio that nazi Israelis, use the argument that a tin can rocket traveled miles, to kill some innocent Jew as a direct hit (likely a person who hated godless NEOCON), all because that nazi state has OPENLY, as PUBLIC policy, stolen water and food including baby formula, along with a huge list of other atrocities, to punish God and Humanity since way back before three of four truces. AGAIN, Nazi Israeli always, as ungodly, break their truces. Why? Because YOU, or Christ as any Jew's life means nothing, to all the 'free' billions they'll get from given American worker wages. Look, Americans refuse to call for the arrest of Bush on their national, "truth telling" Coast to Coast radio program. Why? Because, for one, George Noory, (Alex Jones' best buds), has told US he's into killing innocent kids as powerful, and that 'bin Laden did it', Is good enough for US. You don't get a say here however how you will live or die. George Noory calls all grunts heroes, and those who refuse criminal orders, those he wishes to go ballistic on. Yes, it's true, George Noory is still alive and happy as ever.

Rise Up for innocent Life, or don't and see where it'll get you in the end.

Again, every soldier in the Air Force serving for the neocon liar is a traitor warranting death, to save the lives of their next innocent victims. They have murdered more than two million people in Iraq. They are pushing heroin into America from Afghanistan. They are raping AMERICAN women as officially "LAWLESS" (can't be arrested but through Rumsfeld - who has not seeked any prosecutions for the raping of American Peoples. He, as Neocon, is TRYING to DESTROY FREEDOM For all Americans in America - while paying with American wages, South African death squads to murder Black men) and TV'ed Americans refuse to speak for Justice denied themselves. Zionist amerikans only see US as innocent others, not themselves to pay, but they do pay, they will pay.

God, nor John will not live in a world where
bushite grunts walk freely down our streets as
first degree mass murdering rapists, torturers,
and thieves. Celebrated by CNN, CBC, and FoxNews.
Especially when they DEMAND they have greater
rights than Human Beings. Mass Murderers deserve
immediate death sentence to defend ourselves
from their demon lies and betrayals to God and
Man. Every CBC and CNN reporter who reported
Russia attacked Georgia unprovoked will warrant
trial, then death sentences for their total
commitment to the Satanic NeoCON enemy war
criminals. Remember: they targeted for murder,
helpless innocent families. YOUR family. CNN
wants you to blindly believe, CNN personalities
like ENEMY George Noory are so happy, why would
we think they willed death against our great
Humanity by conning you for more stolen money
through the sacrifice of YOUR life for zionist
criminals who laugh at your powerlessness to
raise your voice for Justice.

Stealing the Title of Jew from Christ:

Fallujah by the Sea: Aping America, Israel Unleashes Chemical Weapons
in Gaza
http://uruknet.info/?p=m50412&hd=&size=1&l=e

Look at this picture of nazis indiscriminately slaughtering
our Humanity, while on MSNBC they reported that the Nazis
will continue to murder Humanity until a truce can be found,
A truce that the Satanic enemies of God will naturally break,
as they ALWAYS do. They are godless enemies of Life who wish
to steal the Title of Jew from Christ. They targeted Jews in
Lebanon with seven million land mines, and let Jews starve to
death in Israel for more charitable aid they can steal from
G-d's Good Will. When asked by Israeli newspapers why, it was
said to kill a Jew is rewarding for the godless Zionist.
Public record. Die bushite die.

http://lataan.blogspot.com/2009/01/israeli-zionists-guilty-of-deliberately.html

/ / In doing so, this makes Israel guilty of using
its own people as ï¿½victimsï¿½ for political purposes. \ \

Israel or Hamas who broke the truce
http://www.youtube.com/watch?v=KUfgULhac8c

ISRAEL BROKE THE TRUCE - ISRAEL BROKE THE TRUCE

-

a-mother-from-gaza.blogspot.com

This web site is the winner of greatest interest
internet site of the years 2000s.

Israeli plan to topple Hamas, re-instate Abbas
http://a-mother-from-gaza.blogspot.com/

/ / Breaking the truce Nov. 4, then, was Israel's
way of getting the gears rolling for this whole
sick game: the toppling of Hamas, and the
re-instating of the impotent Abbas into Gaza
so the "peace process" can remain forever in
formaldehyde, to quote wiseass, er., Weisglass. \ \

Nov 4th! - perfect!. We are dealing with Nazi war
criminals who refuse US, as a Species, Justice
for everyone. Especially The Jew's Jew, Johnny
America. Hint: they call us Love just to hide our
complete agreement with this Living Universe to
will Justice for God as every last bushite zionist
freely moving. Once all the neocon zionists are
rotting in a prison cell, or formally executed as
godless war criminals, we all will have one joyous
welcome in a heavenly future.. Until then, demand

Justice for US. That's YOU too. Angels included.
Who? I don't see no Johnny Wizard here anywhere,
We are Good to Go. Rise Up for innocent Life,
or don't and see where it'll get you in the end.
The bushmob are traitors for closing official FBI
investigations into 911, immediately after the mass
murder of Americans occurred. Treason, of a, trust
WE don't have it in US to stand for our common
values as the Revolution will not be televised,
Johnny Who. Man, are we or no? Be Somebody, then
get on your phone to call in for Justice willed.
Alive I Say! - this must be where you'd raise the
dead and dying.. if you only could raise your finger
to dial the phone numbers - well guess what? - I Command
You Can! - snapoutofit - Speak for pursuing Justice
on 911, and show serious concern for publicly paying
private banker men trillions in worker wages for
nothing. This is seriously disturbing, yes, but
seriously important to address openly in our spaces
to remedy with a Johnny Wizard World Wide Work of
Wonder, Super CNN Special of Specials, with Your
Host, the One and Only, President and CEO of
Shareware Earth Co. John Himself. Hey everybody!
Wow eh? So a.. when is the good guys showing up?
Now. Justice. I want US to Host Coast to Coast for
open Public communications, where things get
solved because we know whats we're learning about.
We of god, this way comes, then men and women with
calculators to know: giving money to private bankers
on hopes they'll lend a small fraction some back
to ourselves at high interest is dumber than rocks.

Arab American rally in Dearborn for Gaza
http://www.youtube.com/watch?v=AVP4_-u6MV0&NR=1

Israel Drops White Phosphorus Bombs, Littlest Victims Suffer
http://www.apfn.org/apfn/DU_Israel.htm

My friends, demonic evil forces do exist to STEAL
the living rights from anyone of us, especially
including the Jews. Remember, it is the zionist who
steals God's good name through lies left unchallenged
by private corporate interests tied to the CON of
private banking in total. Christ is a Jew too.
Israeli broke the truce knowing such action woud get
killed Jews in Israel, a cash bonus! Like starving
Jews do attest on a infomercial that ran for near
18 months across Canada. Then covered by the Israeli
press, that the Zionist officials there actually
enjoy the prospect of suffering Jews because it,
OUR SUFFERING, will attract more charitable aid the

ungodly criminal enemy can use elesewheres! Hitler revisited. I am the Son to God and I wouldn't lie to you about an issue as hughly Satanic as this.

White Phosphorous: Israel fires artillery shells into Gaza
http://www.sott.net/articles/show/172089-White-Phosphorous-Israel-fires-artillery-shells-into-Gaza

We can overcome this, and create a better world in the process. It's back to the simple things: open communications, and evidence, evidence, evidence to convince ourselves truly of anything. We are in a horrible dream right now, that we must arrive ourselves into for comforts. Arrest the Neocons for treason. That of course includes anti-gay faggot Bolton for his and Kalilizad's treasonous lies brodcasted on FoxNews these last few days. And Peter Powers for the London bombings while we are at it, then, we'll really being going places.

/ / My relative's neighbors- 3 young children- were all killed today \ \

-

Satanic Enemies of Christ

CNN with Blitzer allowed reported on Larry King that Hamas broke the truce, without any uttering of fact. While when the nazi israelis were accused, just minutes earlier, Mark Regev could say only silence. The zionist Satanic enemies of Jews speak only silence, because they know they are satanic enemies liars of Human will.

Again, these SATANIC enemies break their truces everytime, then state, it is Humanity's fault because CNN will never ALLOW the humans to know. They are murdering innocent People in hospitals for example, or those in a Church, just as amerikan bushite nazi grunts do for the escape of the neocon zionists responsible for 911. To hunt a lawless bushite nazi grunt, and kll it instantly is to defend it's next innocent bombing victims. Bush and Cheney closed 911 investigations on 911, therefore killing a lawless bushite traitor for our Humanity is just to get ourselves together to arrest those responsible for mass murder on 911. The deaths of bushite zionist liars is a mercy given for the love of God. Die bushite die.

Israel Nazi State

Israeli nazis state they will murder humanity indiscriminately until rockets stop falling on their country. Yet, they broke the truce. They always break their truces. Understand these Satanic enemies of God, dropped seven million land mines on Lebanon when learning the conflict was over. They will kill Jews for money, THEY are the Nazis. Nazi Mark Regev is clearly insane. 'It wasn't israel that started this' He could not stand with any man without instantly being exposed to All of Humanity as a war criminal in need of immediate public trial for death sentence. These are only innocent people being bombed. In a concentration refugee camp. Look, it's a prison camp. And if YOU
were a prisoner there, and Texan child rapists are something you'd wish to defend your community from, you'd maybe join the Gazan police force, run by Hamas, a political group democratically elected. All police officers in Gaza, Nazi israeli claims warrant 1000 lb bombs, not warrants for arrest for a criminal offense. Remember, it was Israel that broke the truce, as so is spoken by Palestinian government officials speaking internationally - using the example from November. But understand, as Satanic fraudsters, they always fuck over Our Innocent Humanity this way.

What kind of "Human" would commit such crimes against Life? Cheating Liars for Satan God tells YOU.

The Bible "I know the blasphemy of them which say they are Jews, and are not, but are the synagogue of Satan."

Look, these enemies of Life steal INNOCENT PEOPLES HOMES as thieves of The King of Jew's simple philosophy.

The Reality of Zionist War Crimes in Gaza
http://www.youtube.com/watch?v=GDjthFt6EZg

The zionists aligned with Bolton are using radio-active weaponry against all Christians. What do "Christians" in America on Coast to Coast have to say? Nothing because that demon enemy of Life George Noory, the pro child killer, insists as Truth's closest most bestest friend, bin Laden did it.

most moral army in the world:

Our reign of terror, by the Israeli army
http://www.ifamericansknew.org/cur_sit/rot.html

Glorified by CNN, CBC, and FoxNews:

ï¿½do the Gazans know that only Hamas is to
blame for their sufferings?ï¿½

Remember those same news groups will KILL
Americans too with poisons in our foods
while smiling as George Norry does Daily

-

Gray Ghost

/ / Funny thing noone ever shows pictures of
the scumbag Hamas rockets falling on Israeli
civilians, but the nooz is full of Palies
suffering. Fuck you all I hope Israel
exterminates the vermin. \ \ He can advocate
the MURDER of innocent people for the neocon
liars, and Google doesn't destroy his account?

Remember Zionist Nazi Israeli started all their
murder rampages against Innocent Peoples for
'free' welfare money, as broke the truce with,
IDF funded Hamas on Nov. 4th. They have been
indiscriminately bombing People with excuses
that never do add up. Example: Nazi Israeli
stated they were in the right to murder ANYONE
in a car or truck in the entire nation of
Lebanon, (especially in the Jewish communities)
because like enemy "Gray Ghost" would say, all
those innocent Peoples deserve TO DIE AS MURDER
VICTIMS for his sadistic ungodly pleasures.
Remember, Nazi Israeli didn't mention this until
thousands has already been murdered, then even
still, without radio, TV, or newspapers, telephones,
or sky writing how were ONLY THE INNOCENT JEWS
as officially targeted to know? Then the seven
million land mines to kill innocent kids for
generations. To the enemy of Life, Gray Ghost
it matters not that Israeli started the conflict
by sacrificing nazi vermined trashed as Satanic
dumfuk enemy soldiers sent across the border,
to Grey Ghost, all it knows, is Justice must not
be allowed to win this game for our human race,
for he would be truly seen as a sadistic enemy
of Freedom, powerless, or rightly dead for
his proud treasons against life in this universe.

ZIONIST DEMON LIARS TO SHOW HIT ON TRUCK FULL OF ROCKETS ACTUALLY HIT
TRUCK FULL OF WELDING TANKS

http://english.aljazeera.net/news/middleeast/2009/01/20091117737115874.html

Please John begs all People's of Humanity,
Americans do not have the courage to even speak
concerns for their dying as evil state of godless
private banker ruled blind tyranny. 'Duh, yeah
give billionaires trillions, trillions, TRILLIONS
to help the poor homeless mothers poisoned by
FoxNews CRIMINALLY.' Gawly je, I dunt no y dat
detnt work-ed' - o wel, cary ohn my wayward Son.

Livni: Gaza truce would give Hamas legitimacy

See? this is why NAZI I$raeli thinks they have
an excuse for bombing people indiscriminately
to break a truce they signed on to. This isn't
a one time, maybe two time occurrence, but every
time in the last 60 plus years the zionists
aligned with Hitler have. Satanic enemies
of Humanity.

ANTI-SEMITE is FoxNews every time they assault God
with "Israel, the Jewish State" to torture, steal,
and murder.?. ANTI-SEMITE!

The Ungodly Zionist - a report from the front

/ / The most recent victim of Israeli airstrikes
was 10-year-old Ismail Hamdan \ \

To the Satanic enemies of Man, the Ungodly Zionist,
an innocent murder victim's life can not be allowed
a defense such as the charge of first degree murder
against Netanyaho because, he states no Justice to
any who believe in the Jewish cause, as Hillel, of
freedom as Liberty for all. If Jews ran Israel,
Netanyaho would be chastised publicly by the Humans,
for sanctioning the criminal acts of first degree
murder. The nation of Nazi Israel STEALS Peoples
HOMES. What other nation on this Earth commits
such willful crimes against innocent Human beings
OFFICIALLY? Steals homes from god loving innocent
folks and labels it our 'Justice system'? Who? Neocon
Amerika, the nation that gave trillions to bankers
recently on only prayers that their gods will maybe
lend some of their own money back to them at high
interest. But alas, evil is the deceived disguised,
as in their deep ignorance of money and virtue, they
do not understand, the private banker never covers
the loan. Never does a private banker reach into
it's pocket to borrow US to begin with - so as a
consequence, the bankers have just pocketed all the

'free' loot for nothing, TRILLIONS, and are not
saying why should they help anyone else with charity?
it's the amerikan way. Instead, hate the wise socialist
who designed a working good traffic signal system,
where lives are saved and congestion is eased, or
hate the white man, the black man, different People.
But never Mr. Bush, Mr. Cheney, or Rumsfeld, the
neocon traitors who closed criminal investigations
immediately after the crimes of 911 occurred, who
doctored the NIE to con America into death, and
never slight the trillioniare private banker gods,
who have stolen/taken our public authority through
war criminals in Congress. Taken from all others
to bring us a much poorer world suffering due to
our speakings of contempt for Justice as christians
in America - who claim in silence only indignation
for real Christian families robbed or murdered
Officially by the zionist state of ungodly Israeli,
paid for by dying America. Americans refuse to raise
their phones for the arrest of the bushmob for capital
mass murder, so, what's private trillioniare bankers
walking away with the entire economy in free fall
going to do for them, when they are already to
death for the glorious Zionist Neocon thieves of
Civilization? Proudly in hatred for Innocent
Humanity. Again, Hamas was founded by Zionists
in the IDF, to kill Jews for money - public record.
Jews starve near death in Garbage dumps of Israel,
all because the Nazi Zionist UNGODLY government
states it is beneficial to starve Jews, for, they
will receive more humanitarian aid THEY can use
elsewhere. Public knowledge. Zionist liars murder
innocent Jews for money, like they did in Lebanon,
and like the zionists did on 911 by forbidding the
pursuit of the terrorists by following the crimes
scene leads at the real murder scene. Unjust
enemies of Man.

To arrest those responsible for 911, we are going
to need to form a public warrant for a person or
persons. Bush and Cheney are guilty of closing
investigations on 911, treason, called obstruction.

UnHoly Nazi Israeli Racists are Greater
than the censored words of Messiah!

IDF's YouTube Gaza channel to Correct Ourselves

/ / it will disseminate footage of precision
bombing operations \ \

Precision? They dropped seven million land mines in Lebanon, after having seeked out where the Jews lived, (Northern Lebanon), and murdered them firstly! JEWS. They, as enemies of God, like those of FoxNews, will refuse these type of FACTS on their hatred for Love and Justice. Their hatred for Jews, real Jews, like me. Understand: American baby formula has been contaminated with poisons, and FoxNews doesn't think it's important to their corporate responsibilities to kill ourselves further for profit. The Zionist will murder anyone just to steal your belief in God as Love. They HATE me for being wise and Just. Hate. For, why wouldn't America support my demands for open radio communications on the Coast to Coast radio network? Americans would rather murder Humanity before Justice succeeds beyond their illusions of grandeur through the mass murdering of ourselves for stolen gains. The banker does not cover our loans! Giving them trillions for free unquestioningly is dumber than rocks. Enough.

Fake Rocket Attack
http://xymphora.blogspot.com/2005/02/fake-rocket-attack.html

Remember however, the Zionist has no qualms about killing Innocent Jews too if it means Americans will get it more free welfare to murder ourselves. They openly STEAL Peoples homes in that nation run as thieves don't You know? Or as it is just open public knowledge that the Zionist excepts that 911 was actually a good thing for them as war criminals reaping the cash rewards for continuing capital murders?

/ / Ehud Barak promised that the war would continue ï¿½to the bitter end.ï¿½ \ \

That is you there Barak promises to end bitterly as the innocent the demon targets for ungodly murder. How could ANY REAL MAN steal food from a Christian baby? How do they do it?, as the inhuman. (Like bushite do in Iraq, while on CNN in interview tell US, they are there war criming for neocon traitors to steal everything as "helping the Iraqi children". They offer no clean water, no food, just indiscriminate bombing campaigns of evil incarnate. True fascist nazi enemies of true freedom in America who advance censorship to

anyone like myself. Why? They lose. They are not men but Satanic enemies of the King to Jews, the Messiah. I Am. Thieves to the scriptures of Hillel, and of Moses. Thieves to the intent of every true religious person, for God is everywhere. God is the Word, and the Word is Holy. So, fuck you and die bushite nazi traitors to American Justice, those of them who refuse US open free words to resolve their war criminal behaviors as is done in godless Israel today against INNOCENT Christians. Done before another innocent other has our homes stolen, or is murdered by the lawless grunting bushite dumfuk enemies of Jesus Christ. I am King already, always have been, always will be. Live with it. The Koran is filled with great understandings on this relationship. Christ is mentioned more than Mohammad - and Mary can be understood as the mother of all being before we are. a virgin.)

Look humans, you've
had your fun murdering yourselves, now the wise people will compete for bettering ourselves by understanding. Who the fuck are these illiterate monsters at CTV national television? and how can they willingly keep our soldiers in the dark dying that way by simply smiling? Are they experts in anything? are they respected researchers? writers?, politicians?, civil rights lawyers? - do they even respect ourselves enough to be warned of vaccines? NO, instead they LIE with such contempt for Humanity I am surprised Canadians, don't speak out more.. perhaps they do, it's just CBC, CJOB, and the Winnipeg Free Presses of our World make no attempt to inform ourselves about it. They don't take my thousands of calls, how about Yours?

Life is real to know, if you seek, and not go so freaked out as Living is as it always has been. Knowing God is cool, 'amazing', yeah, whatever, but we are of too this real world suffering for our lack of respect for a wise person speaking. I WANT FREE PUBLIC DEBATE FOR JUSTICE AS ALL INCLUDED. Now really, is that too much for US to ask freely? What say you Googler? Afraid I will truly make your banker gods look like fools?, the gods we all give more than half our lives to for nothing? Don't want to look truly dumb as deathly ignorant, so censor US all themmers you are

too in command of your Fate. So be it. See? Stand in. I didn't even really do anything there, yet it's written, it's done. A Miracle! Imagine: your Christ! YOU. now what are you going to do.. time is ending for you remember, now what are you going to do? Will you pick up your magic phone and call likewise for Justice denied, or will you crawl up on your cross and die in silence for the glorious Zionist aligned with trillioniare private bankers and Satan? Christ is of all peoples. Your on a mountain.. You've raised yourself from death already, and your here to do something greater for the love of God.. what's your plan for the common man? Welcome to the real world my friend.

Morpheus 'Nobody can tell you what the Matrix is, you have to see it for yourselves. .. all I am offering is the truth Neo, nothing more'

Lawless Police to Defend Who Again?

They Call it Terrorism

"Israeli nazi enemies call bombing people, like they do without apology, terrorism. What can't you figure?"

CNN TODAY

/ / Stand down 'Christian' nation. It's not your babies. Ethnic cleansing is not a 'sin' as long as the 'chosen ones' of Israel do it. \ \

Israel, the nazi enemies of God nation broke the ceasefire on November 4th. Now, as demon liars claim they want to honor a ceasefire again to further steal ourselves from the Love of Justice. Why do the godless Zionist do this always as first degree murderers? Because they can't win an open debate on their treasons against God and Man. The private bankers DO NOT cover our loans. Again, these SATANIC ENEMIES OF GOD dropped seven million land mines on Lebanon while target killing JEWS. INNOCENT JEWS. Targeted. Northern Lebanon, look it up. Israeli MURDERED Jews. Innocent Jews as targeted for more stolen charity. I again, beg you to support my call for war crime trials against the bushmob, including

CNN demons who report a total contempt for
YOUR life dying. Your call loser.

ISRAEL: No civilian casualties in Gaza!
http://uk.youtube.com/watch?v=RlZd3vR6Kzk

Satanic enemies of God as anyone included.
Think: who buys these demon lies to steal
further from our innocent Humanity? Zionists
do at CBC and CNN, who will murder America
by openly lying to destroy freedom. Example:
CNN reports Georgian nazis who targeted
children schools, churches and threw grenades
into our homes to murder as minions for Satan
are called freedom fighters. Just like the
Third Infantry, the new lawless police officers
of California, who can't be charged with rape
for example, because ONLY Rumsfeld can okay
such prosecutions. Hey who cares for Iraqi Rights
right?, for TV America's CNN with FoxNews and
George Norry doesn't, for it's only American
women and children now right nazi enemies? And
WE ALL KNOW, cowardly America refuses to even raise
their phones for these dying concerns. How can
George Norry continue to live happily dying
America for the neocons? How? they let them.
Alex Jones thinks George Norry is just
fantastic, so no, don't encourage the NWOers
to demand free communications, because if we
did, Alex Jones and the like, would factually
look like the idiots he is. (better to die
America than face this foolishness?) The
banker doesn't cover our loans, we do Alex.
So giving them trillions in American worker
wages is a bank robbery in progress. Simple.
NOT a diabolical ingenious plan, we, the simple
folk can't figure without the Alex Jonesers
geniuses of thought control developed by the
CFR, builderberg, the Boners and NASA.

Obama stated all lawless soldiers who war for
godless Zionism are heroes, which includes South
African death squad goons who murder my nigger
friends. AEGIS. I call them lawless enemies of
God, deserving death sentences to save the lives
of their next innocent victims, Obama calls them
heroes warring for the escape of the neocon
traitors responsible for 911. Who are you going
to believe?

Look, I plead

http://news.bbc.co.uk/2/hi/south_asia/7771243.stm

/ / Calcutta police arrested Mukhtar Ahmed
for procuring SIM cards for the group without
knowing that he was an undercover operative.

He was on a long-term mission with police
in Indian-administered Kashmir. \ \

His cover was blown?

This is a guilty\accused party to the offense,
and blind men of state plate, 'we're going to
maybe let him go, so they can start a war of
mass suffering and death.'? Who is "we" enemy?
Why is this story not where it should be? Who's
interest does it serve by further dying
Humanity to: we don't care about not stopping
terrorist crimes in progress then? Don't be a
Nazi. Why? Just because. THE 'suspect' WAS IN
ON THE MASS MURDER OF US. Justice for All
there you nitwits. Under who's command was he
working?, and does Condi figure in there some
where by sending TV America elsewhere? Who is
set to gain money in the planned indiscriminate
murderous bombings, and let's try, then execute
them instead of US as innocent victims how about?
King of Earth I am,

An American Patriot

FDNY Lieutenant Admitted Plan To ï¿½Take Downï¿½ WTC 7
http://www.prisonplanet.com/fdny-lieutenant-admitted-plan-to-take-down-wtc-7.html

Protect Elections, Prosecute Rove
http://www.velvetrevolution.us/prosecute_rove/

/ / The GAO reached the estimate of 190,000 missing
arms - 110,000 AK-47s and 80,000 pistols - by
comparing the property records of the MNSTC-I against
records US General David Petraeus maintained \ \

Understand this: Saudi commander Buford Blount, gave
out 170 tons of explosives for looting, all so they
could, shoot us up in Baghdad. A Saudi commands the
Third Infantry as traitors to the cause of Freedom.
Cowardly dying Americans are so due to self contempt.
Cowardly.

9/11's a lie

In a Normal World

"It's not that we're Jewish, it's that they are
war criminals."

IAF plans to hit targets in 24 hours
http://www.nation.com.pk/pakistan-news-newspaper-daily-english-online/Politics/23-Dec-2008
/IAF-plans-to-hit-targets-in-24-hours/2

"General Mullen is pressing our authorities to
allow India to hit certain targets,"

In a normal world, Mullen would be questioned,
then arrested, tried, and executed with Gates for
trying TO KILL INNOCENT PEOPLE for cash profits
stolen from God's America. But the nation is filled
with cowardly know nothings.. how do we know this?
They refuse to even pick up their phones to complain
about DYING needlessly for the un-elected Zionist
neocons. The TRAITORS who did their part to carry
out 911. America only PRAISE real demon George
Norry who openly lies to the ears of America, while
advocating the indiscriminate slaughter of all
children in around 15, because he claims, that way,
you reduce the risk that they might sometime in the
future own a gun to kill himself as a REAL bad guy.
These REAL monsters will kill your American kids for
cash. Why? Because YOU refuse to even raise your
phones for concern. It's "just" your neighbor's kid
who'll get the vaccine shot filled with toxins, drink
the American Milk, chew the bubble gum, eat the
Campbell's Soup, or drink the tainted water. The
poisonous water containing sodium fluoride is in
soft drinks, beer, and bottled purified water costing
near 3 dollars that Pepsi openly confessed, they just
get right from the poisoned public taps of Boston,
unfiltered. TV America? where are you man? Why do you
still refuse to raise your phones? You go in faith
WITHOUT science, with reason?, without God, or even
crave my words as the Great Son. Why do you forsake
yourselves? Are you not worth the effort to say your
own lives are worth something too?

Charlie Manson "Yes, your honor, I did authorize
the killing of Sharon Tate and the rest, but you know,
we need to focus on the future rather than the past!"

Bushite Nazi grunts of the Air Force have bombed
more than a many innocent persons, claiming we as
Humanity can't hold them to account for their
murderous crimes of STEALING our lives. It is an

oath soldiers give to obey lawful orders only,
yet, a bushite's word means nothing. They bombed
Samara for no reason but to die. They bombed
Fallujah for no reason but to die. No honor,
no courage, no manhood.

Where's MY Bailout???

"It's must be good to be too big to
fail, or be a fat cat too big for jail."

In who's world?

-

http://www.sundayherald.com/international/shinternational/display.var.2476912.0.bulldozing
_bedouin.php

/ / Where does Israel think these people are
supposed to go, after evicting them and
torching their homes??? \ \

See, the thing is, these Satanic enemies of
both you and me, (along with every other
life form is this Galaxy), seem to think hurting
innocent People, murdering ourselves actually,
will destroy God's Good Work for Justice
in our times, while they make of as terrorist
thieves.
It's not that we're Jewish, it's that they are
war criminals. How could any living Man, On
Earth, STEAL food from innocent infants and
mothers? Randomly send in Military rockets
into refugee camps? Who? SATANIC CRIMINALS WHO
HATE JEWS. Jews, Real People, like me. To all
be fair is my motto, as was countless others
- as also known as The Golden Rule. (look for
Johnny's The_Golden_rule.mp3) and don't forget
about Confucius!

-

CONDI DID IT ?

"In other words, Washington exerts more control
over the ISI than the duly elected civilian
government of Pakistan."

Now, that's bizarre. Imagine doing it, then
blaming yourself for it on hopes one thing
doesn't lead to another. All are innocent.
Justice is freedom. Lawlessness is evil dumb
man. Sorry, but that is now the world turns.

-

Will Congress listen? IMPEACH NOW! Bush is a Threat to Peace

CNN Don't Want to Take our Questions

Cheney worked immediately after 911 to close
police investigations, as so reported
on Meet the Press, with the late Tim Russert.
Simple. Or cowardly like Alex Jones call him
just a puppet, and blame the NWO geniuses
hid away in far off places, manipulating to
secret out the blind idiots who don't truly
believe in elementary logic. This isn't
complicated.

Fed Refuses to Disclose Recipients of $2 Trillion
http://globalresearch.ca/index.php?context=va&aid=11416

Bernard Madoff -- The $50 Billion Thief
http://www.youtube.com/watch?v=0IhJJXjxmHU

This spot where the Jews laugh at law men,
then get all their life savings stolen, is
THE classic in the halls of Zionist History.

Some say, Christ, the Jew, is a law man
too don't you know.

This is What Americans Are?

/ / the United States has refused to sign
a declaration presented Thursday at the
United Nations calling for worldwide
decriminalization of homosexuality. \ \

Again, this Zionist infiltration is
designed to divide our populations through
demonizations against the Innocent. There
is no crime in loving people despite what
GCN advertizes.

"The concessions made by the Olmert-Livni
government to the Syrians do not and will
not obligate a government that I shall head,"
Netanyahu said. The concessions of indiscriminately

murdering US repeatedly? Understand to know:
The Zionist is a Satanic demon enemy of Humanity
according to God, in the Bibles all timelessly.
Netanyahu, the demon, is so ungodly as evil
criminal, he will likely "win" Istraeli the Zionist
election on a public platform of godless tyranical
theft and murder. Remember, Israeli Zionists
funded the creation of Hamas to kill Jews in
Israel, and TRUE Jews also live in Lebanon, Iran,
Etheopia, Canada, and the North Pole, and we're
the "niggers" there too that Israeli despise -
like as they who PUBLICLY supported South Africa's
oppression of Innocent South Africans for stolen
monies. Satanic I tell you. Don't believe? in
innocence? That's the power of Peres, the devil.
Evil a zionist criminal is proudly. Peres will
tell you, all about when Zionists target to murder
little old ladies as he did on Larry King, it's
really not Satanic, because they'll blame the
murders on someone else completely different,
as US, the innocent. blatantly. In your face.
While CNN goes, uhuh, gotta kill those Jews in
Northern Lebanon. As Syrians too! Israeli dropped
seven million land mines on more than 170 towns
and villages given to them from Condi! a godly
nation of Jews? ANTI-SEMITE is FoxNews everytime
they assault God with "Israel, the Jewish State"
to torture, steal, and murder.?. ANTI-SEMITE!

Again, the two Laws of Johnny:

1. No evidence, person innocent.

2. Torture? fuk you and die then

-

MY LIFE HAS VALUE

"You can't count on Congress or the Courts to save yourselves"
Ron Paul - The oUtRAgiOuS fUnnY MaN

Ron Paul is a traitor. He didn't support arresting
Bush for 911, or for the killing of American teens by
doctoring the NIE. Now, Alex sells Ron Paul, is
his leader of OUR truth movement because he says
there's nothing he's going to do but blame poor
people, or socialists,

"The Liberals and the Socialists, along with
the Communists and the Gays, with the Muslims,
and Community Organizers with the freaks different
that me did the murders", said near all the retard

bigot Conservatives blindly false accusing.
Example: Condi says Pakistan's ISI committed the
murders, the FBI says no, there isn't a scintilla
of evidence to substantiate that. Condi says
Pakistan's ISI FOR SURE did the murders, the FBI
says no, there is not a whisper of fact to form
that conclusion. The "Army" says for sure Pakistan
did the murders, the FBI says no.. There is not
a thread of fact a zionist offers to form YOUR own
mind in respect for your rights being equal to ours.
Condi only tries to hypnotize the "Conservatives"
into believing something without understanding,
without knowing. Sean Hannity does this everyday
on purpose to kill innocent American teens.
Conservatives are universally ignorant People,
and sometimes, serious war criminals like Condi.
Taking US off the target of following the crime
scene leads at the real murder scene. The
"Conservative" mostly doesn't have the mind to
understand Justice is freedom, like the NWOers,
so they false accuse US as Innocent others, for
crimes they don't speak for as Our true defense.

I'm counting on you kids eating right, and
knowing you belong free here. I'm King Johnny.
Hi.

Anyway,

Imagine: Alex doesn't ask 'hero truth
teller' Ron Paul for a million or three for
advertising on Bush and Rumsfeld's prior plan
to invade Afghanistan for Enron. Why not?
Who's money is it still anyway? Ours. In
God we Trust. Wanna see a card trick?

Christ Loves Everyone!!

I can FIX Monstanto's GMO assualt.

How? by understanding the science
involved, that Monsanto DOES NOT, and Alex, not enough.
(look for works I've done A DECADE AGO FOR ANSWERS -
Google however has removed more than 20,000 documents
referencing my writings as of last month - do you care?
That a man such as great as I, will not be allowed to
give my works for free to Humanity any longer? -
People of Earth: undertand, many in America say YES!
here, because they truly HATE Humanity's cause of
Liberty and Justice for ALL. Google closed my
Jew_Boy_Johnny account, all because of vermin like
"shitskin Moslem", who openly message in the

hundreds daily for murdering innocent Moslems,
who pirate all of Google Groups with racist
nazi slurs, just needs simply complain I am anti-Semitic
- The Son Of Man - no trial, no questions, no answers!
I can not post more than three times every four to six
hours, otherwise, they close my accounts, while at the
same time then, go through years of my writing to
sadistically destroy more. They figure they have
something in our Courts to support their treason of
assisting in mass murder against America by Zionist
theives who steal the title Jew, as in godly? while
shitskin posts hundreds daily pirating everyone's
threads with his EVIL hatred for God and Humanity, if
not even more from Israel) Not the Alex Jonesers way,
but the actual way logically understood as where the
problem resides. DNA, as is life, is multi-dimensional.

Where is this
"Christ" that CBC, CNN, GCN, and RBN harp on
that speaks nothing for real Justice to the victims
of 911, or Iraq, or Afghanistan? Or the children of
South Osettia? Alex is near fit, but he is far from
sufficiant. Jack Blood was great, but Alex we guess
doesn't want him looking like he Rulez like US
too though. RBN has it's moments, yes, I guess that's
true.. Things do seem to be improving, what with
all the torturers and rapists wanting to come home
as brain damaged Zombie police officers. They don't
want the laws of freedom though, too complicated.
They'd rather hunt down our families from the
sky with bombs actually.. fuk, I hate EVERYONE
in America's Air Force, every last evil fuk. They
watch these videos and celebrate their complete
indiscriminate murderings that get killed so many
GIs - they celebrate the slaughter of our innocent
Humanity . George Noory will kill your American kids,
have no doubt, for, he already has.

CBC and CNN only smile to tell you all the great
things they do by denying OUR Humanity these truths.

America is a cowardly evil nation desperate
for excuses as still being run under by zionist
thieves.

-

Israeli Settlers call Ethiopian Jews "Niggers"
http://www.ynetnews.com/articles/0%2C7340%2CL-3633163%2C00.html

This isn't isolated. The Jews of Ethiopia, are
the actual Jews of the Bible. These monstrosities

that God knows as Israeli, are Satanic enemies of Man. They steal our homes, rape or torture our INNOCENT families, and bomb Jews as the did in Lebanon TARGETED as an OFFICIAL function of their evil "government". They actually, a few years ago, gathered all the darker skinned toddlers, and murdered them as an OFFICIAL government of SATANIC action. More than 100,000 "Nigger" toddlers, Jews, they murdered with radiation poisonings. Officially. Now, Americans GIVE them money to bomb innocent Christian families indiscriminately guilty of nothing. They steal their desperately needed food and medicine. They are thieves of the most vile evil natures. Example: the Zionist who STOLE 50 billion dollars from American Jews will not be ordered to give back the money! Sure, they tell you that SOME of the suckered Jews, will get a small portion of their investment returned, but only through the wages of American citizens, NOT by the Zionist THIEF, T-H-I-E-F, who you are told OFFICIALLY "lost" the money. (will he even spend a day in jail?) He lost it, ah shucks, just like the trillions "lost" to criminal trillioniare speculators. And like the banksters, who never covered a dime of the money for the fraudulent loans, but get to STEAL your homes, and now wish to charge US a renter, for a home Americans, the illiterate suckers, actually paid for, and will continue to until they speak above the laughter of a George Noory, or con man Bill O'Really, the true demon enemy. Or will instead? cowardly, will go like Alex Jones, naw, George Noory is a good guy, a happy guy, sure he speaks of the enjoyment in slaughtering defenseless innocent children, so what?, he's pleasantly happy to state all is well going ballistic against soldiers who refuse criminal orders from the Zionist neocon. Not a fuking dime!! Understand, this isn't just a, let's get the info out for People to know as Alex Jones sells to near overdose.. (we are mere mortals who work nine to nine Alex The Great.) CBC managers, all of them, have known since shortly after 911, that Bush and Cheney closed FBI investigations, they know that iron is on video flowing like water from the towers, THEY KNOW THIS because I personally told them. Yet, they smile as demon liars to die our teen soldiers CONNED deliberately. We need some serious police action in arrests of treason against all news

celebs, who of course will get lawyers, (what
they deny in happy silence to not mention
against American torture victims) but will
be shown conviction for their real contempt
for the value of YOUR life my friend, our lives
they watch indiscriminately die for lies they sell
happily for stolen cash profits.

Dead Babies Can Take Care of Themselves
http://bellaciao.org/en/spip.php?article17872

/ / The FDA may not know a safe level but I damn
sure do, that level is zero! \ \

But will Americans of America, even lift their
phones against happy George Noory, CNN, and all
that sees fit, to sit idly silently dying US
victim in their corporate extravaganzas? I hear
the magic money bag guys are in running the show
from our central banking offices, in as a debasing
culture of indifference to their own cowardly
sacrifice. That's if we believe what we know of
the fictions they sell ourselves. Georgia, Iraq,
Afghanistan, and so on.. they lie to our world
for criminal gains, gains they've seen near to
overtaking them. Demand the arrest of Bush and
Cheney for closing criminal investigations on
911 immediately after the crimes occurred. Then,
without evidence, falsely accused an innocent
man of the crime. A crime they knew enough of,
to plan before hand the invasion of Afghanistan
for Enron. Speak now, or, suffer to die in
tyranny you nation of fascist cowards.. your move.
Your baby.

Does this Work if The Judge is a Criminal?

http://rawstory.com/news/2008/DoJ_blocking_Obama_team_from_docs_1212.html

/ / The Justice Department has evaded a request
from President-elect Barack Obama's transition team
for documents about the secret programs of U.S.
intelligence agencies. \ \ Torturing innocent People
to death as guilty of nothing, or escaping bushite
rapists who target American women in Uniform,
while pushing heroin to enslave American teens for

zionist grave robbers. Not in Johnny's America I'll
tell you that right now.

It actually doesn't work that way though..
Justice is man.

NASDAQ chairman Bernard L. Madof STEALS 50 BILLION ! !! !!!!!!!
http://www.youtube.com/watch?v=MrcBazJ5Xas&eurl=http://www.brasschecktv.com/page/497.html&
feature=player_embedded

/ / CNBC's Davif Faber reports on the $50 billion
Ponzi scheme run bu ex-NASDAQ chairman Bernard L. Madoff. \ \

A Zionist STEALING from Innocent Jewish Peoples targeted
SPECIFICALLY. Somethings never change... Do you have
any ideas on the fact, that a great many Zionists
have been arrested over the decades for putting Nazi
Swastikas on their own grave stones? Also, did you
know an estimated more than 20 million Russians died
to defeat madman Hitler? Who's banker was Zionist George
W. Bush's grandfather? Do you know this yet?? Well,
now we know we know, to be King I am here your servant.
Just don't therefore figure I'm going to wash your
feet now. Be American.

http://www.worldnetdaily.com/index.php?fa=PAGE.view&pageId=83477

/ / New rules published in the Federal Register
would allow certain civilians to call American
soldiers into action inside the U.S. to prevent
environmental damage \ \

This is why it is outlawed by the American
Constitution(s). Demon thieves must not be allowed
to command mindless grunts who shoot people
randomly for fun. As AEGIS and Blackwater,
KBR enslavement camps along with Campbellï¿½s Soup,
is in part, their acceptable Business partners,
warring Humanity as US innocent for stolen profits
with poison. Teen grunts are admittingly from any
you honestly ask, portrayed ignorant low life
failures, drop out bushite vermins who want to in
turn, victimize the innocent as they accept America,
as them, must tyranny as cowards for traitor war
criminals. Criminals like them in Afghanistan, who
openly defend poppy fields to imprison American
citizens say nothing on their trailer trashcan
talk, internet forays for blatant complete
disregard for suffering Mankind. These grunts of
far off military dictator shipping nations, that
the TV neocon wants patrolling our Americans
streets, don't instead fight proud for our

honorable Police Service successes - of whom play
our Freedom game for the law books sighted as rights
heretowin. A force that claims they are lawlessly
un-accountable, is a force of evil against our
great lands. Friends, they hide nowhere in
darkness, ready to be exposed for Public
questioning. Soldiers were caught dressed as
al-Qaida, murdering police officers, and when
they were in jail, awaiting trial, the bushite
grunters, broke them out!! With "American" Tanks
commanded by a Saudi in some likelihood. (Buford
'where's the billions?' Blount is a Saudi
military commander, who in his off time, also
commands, the Third Infantry!) Posse Comitatus
will be a good thing to impose as standing
Law..?. You're the American Patriot Soldier.
Need help? Well, I could be your make believe
King for the time being.. by just simply,
forwarding these life and death concerns as our
own. We have some rights here Soldier to have
Justice prevail as our benefaction. The bushmob
did 911. Your call.. Don't be dumb now.
Your call..

Lawless enemy world of enslavement though
naked ungodly tyranny?, or American Liberty as
Justice believed for the victims of Guantanamo?
False capital accusers who take our concern awry
are our problem in fair Governance here, when we
understand this, we will have conquered the
world as the new orders. No evidence, person
innocent. Torture? fuk you and die then. These
be the glorious tales we tell of times ago, where
men were men, and war criminal zionist nazis were
hunted down to defend Life ourselves. When a
bushite enemy of America dies, it's a glorious
moment for all innocent Peoples defended from
it's lawless terrorism. They are traitors who war
for the escape of the neocons responsible for 911.
Cowardly traitors who LIE to America to con
further more from the American victims.

The CNN political team chooses the videos, not YOU.

Give Free to Banker.. Loan Back Maybe? Paleeze..

Why We Do the Things We Do

Sales pitch: Mankind takes on the world as One
with the calculators. Civilization DID happen!
Correct math scores are not impossible to find as
an answer to: why we do the things we do. Americans
gave private interest bankers trillions on only
Hopes that these, the most obscenely wealthy of all
the upper classes, are going to graciously lend
some of our own money, (we just gave them,) back
to us... in dire need. at interest! It's for our
benefit baby, don't you cry. This is just plain
dumber than rocks Johnny Wizard says okay. And
simply going to a gold standard is not the easy
made NWO answer, it is accounting for ourselves
that is going without questions. The private
banker is highjacking our public authority for
their private interest of exploitation.

Our governments are not holding Private Bankers
to some kind of public authority to question who's
interests are being devalued here. This is why
the thing has been messed around for so long, We,
the People, have been too foggy on super basic
math skills as pronounced by, truly effective
Jewish leadership. "The Private Banker DOES NOT
cover our loans, we do." Read that again now.
And acknowledging, we, as conscious, can succumb
to suggestion without knowing what we are even
saying sometimes really. Everyone wants to play
the lead, but few are wanting guitar practices.

It get's easier as you try..

Answers: we need a tax on every buy and sell to
limit speculation in the stock markets as it was
prior, while openly discussing how the
investigations are going, in returning the 700
mill that was given through for another means by
Congress. For the private bankers to take that
money elsewhere, is to neglect the problem

persisting of home owners, and that mortgage
issue they forgot US about. Why Americans
desperately, at peril, gave the money to begin at.
Look, while arrests are transpiring, we'll then
discuss using the re-cooped stolen money to finance
all remaining mortgages on family homes at zero
interest levels, upto, let's say for now: $500,000.
It's an idea I'm putting out there to dialog on
with you guys and Obama. Obama!! How's it going!!
Hey man, we can work it out.. You don't seem like an
impossible person to reach. Hey, make life interesting
in ushering in a new peace plan by communicating. Now
I know your all pals with everyone as government, as
that is what a successful politician can do sometimes
good, sometimes criminal. Obama, we can't let these
con men go. These have been times of lawless wars
against God as indiscriminate bombings, of torture,
of slavery, of heroin pushing, of national looting of
a Peoples Treasures. How much is too much for you my
poorer brothers and sisters of the faith? Obama, let's
believe in ourselves. These bankers are stuck crooks
for no faulty but our own. It's still our money however.

King Johnny Earth, White House Jester. !

Our dreams have come true... Boo!

Well actually, no. The stuff is likely to be of interest to some radio
amateurs. It is RF gear after all. Many amateurs have electronics abilities
which would enable them to use the equipment for its intended purpose, or
modify it for amateur radio use.

Bill

Thanks to all for your answers, all figures converge and seems to give an approximate gain of 0dBi around 160MHz, consistent with our measurements.
Many thanks again !

Coil dope can be made from polystyrene packing peanuts dissolved in
acetone. Q-Dope is some kind of cellulose polymer broken down in the
same solvents. If you're planning on making your own, it does take
several days and plenty of agitation to produce a suitable sticky
mess.

The very old 78 rpm records were originally made from Bakelite, which
is quite resistant to chlorinated hydrocarbon solvents. During WWII,
Vinyl records appeared as a substitute for Bakelite. It's easy to
tell the difference. Bakelite is thermosetting plastic and is
unaffected by acetone. Vinyl is thermoplastic and is softened by
acetone.

My guess is that whomever suggested dissolving records wanted to trick
you into breaking your 78 rpm records. (Note: I'm slooooly
transcribbling my record collection to various digital formats).

You don't state what you're trying to accomplish. If it's cleaning
the Q-Dope off old coils, acetone softens it nicely. Wipe clean and
you're done.

>I read that old 78 LP's broken into pieces & mixed with a particular solvent
>was used as coil dope. Does anybody remember which solvent was used & how
>affective it was?

78s were often made of shellac, and the usual solvent for shellac is
denatured alcohol. I believe that some other 78s were made from
cellulose acetate... for this material I believe that acetone would be
a usable solvent.

My understanding is that commercial Q-dope uses polystyrene, dissolved
in a suitable solvent.

According to an article by Barry Ornitz WA4VQZ (the text is at
http://yarchive.net/electr/coil_dope.html), a very acceptable coil
dope can be home-brewed by dissolving ordinary polystyrene "packing
peanuts" in either toluene or acetone (the latter is less toxic).

Hello all
What determines the Velocity Factor of a coax cable.
Is it the center conductor awg,dielectric,shield or all combined
I am building a
Lindenblad Antenna for 2 Meters

its asked to use

RG-59 polyethylene foam coax with stranded center conductor

I think the VF is .66

I cant find any stranded center cond where I am,so I want to try it with
Solid,but it seems all the solid is VF .88

anyone have any input on this

thanx

howard

sorry I should mention the RG-59 is used for impedance matching not feed
line
thanks again
Howard

"Rec.radio.swap" is the group it should have been posted in according to
your explanation above. It's still SPAM in this group.

It's principally the relative permittivity of the dielectric that determines the velocity factor. Air alone would yield a value of unity but the presence of a spacer of some sort means practical values are smaller. Foam can get close to air.

I wonder why you need a Lindenblad for 2 metres - do you really need good circular polarisation over a range of elevation angles (and omni HRP, of course)?

Chris

The velocity of propagation (v.p.) in each branch of the feed harness won't affect the relative field radiation pattern of such an antenna array as long as the same electrical lengths of coax are used between the power divider outputs and the feedpoint of each element of the array.

The v.p. of the main transmission line from the tx to the input of of the antenna power divider in this scenario is irrelevant.

RF

Hi Howard

I am interested in reception of CP signals from all points within the
upper hemisphere. I am curious about your purpose for this Lindenblad.

Jerry KD6JDJ

You might want to consider using RG-6/u instead of RG-59. These daze,
the quality of RG-59 coax is rather marginal. I've seen 80% coverage
shielding and cable unsuitable for outdoor use. Meanwhile, the CATV
people have switched to RG-6/u for everything. Much of it is quad
shielded and UV resistant. Velocity factor is usually 0.66 for solid
dielectric and anywhere between 0.7 and 0.9 for various foam
dielectric mixes. When you find a suitable piece of cable, grab the
manufacturer and full part number. Then, lookup the VF on the mfg
data sheet.

From: Roy Lewallen <w7el@eznec.com>
Message-ID: <VbGdnaP3gdFlaA3UnZ2dnUVZ_s3inZ2d@posted.easystreetonline>
Source record: 17559

I've found quite a variation in foamed dielectric cable velocity factor from lot to lot of the same brand and type, even with major brands. Apparently they don't control the density of the dielectric very well. So if you're planning on using foamed dielectric cable in an application where VF is important, I highly recommend that you measure the VF of a sample from the same piece you'll be using.

Roy Lewallen, W7EL

Hi Howard

The Lindenblad has an overhead null that you might find anoying for some
high elevation passes of LEOs.
Are you open to trying to build a DCA (which is an antenna that I
developed)? I make the claim that there is no other hemispheric coverage
antenna design that performs better than a DCA. But, I sure am open to
being corrected.
The Feb 2008 QST contains an article on the DCA antenna design concept.
It is my claim that a DCA is extreemely forgiving of construction errors
and uses 4 wire dipoles and 50 ohm coax with 5 RFI type ferrites as
"baluns'.

That seems to be debatable:
<http://www.styrenemonomer.org/3.5.html>
Of course, that comes from the Styrene Products Association, which
might be slightly biased.

Given the fact I don't subscribe to QST, domicile Australia, would you have
a copy of the article?

I second that Roy,
Each time we start a new spool (same mfg) we have to remeasure the V.F.-
RG-11U foam.
I too believe it is the foam density that is not well controlled.

> peanuts" in either toluene or acetone (the latter is less toxic).

Thanks for mentioning this archive Dave. I strongly suggest that before anyone tries making their own Q-dope, they read ALL the safety information given there. And yes it really does take several weeks for the "cotton balls" to fully dissolve.

What I think that "Spin" was referring to was that early pressings were made from cellulose acetate. Acetone would be the solvent of choice here. I was not aware that phenol formaldehyde thermoset resins were ever used for records, but if you find any, they won't dissolve in anything!

As for the worry that when Styrofoam is dissolved in a solvent, styrene is released - forget about it. Styrene is rather volatile and has a VERY distinctive odor. You would smell it if more than a trace amount were left in the peanuts. Polystyrene does not depolymerize by dissolving it in a solvent.

Devcon's Duco Cement is nitrocellulose dissolved in acetone with a little camphor as a plasticizer and with small amounts of isopropanol and 1-methoxy-2-propanol acetate thrown in for good measure. If you only need a few ounces of Q-dope, Duco Cement is a suitable substitute.

Roy Lewallen, W7EL, dipped a number of coils in various materials (RTV silicone, epoxy cement, Q-dope, hot melt adhesive, etc.) a while back and then measured their losses with a Q-meter. If Roy can find his old

article, perhaps he can post it again.

Hi HH

It would be my pleasure to disclose any/all the information I have
relating to the DCA antenna design concept. It is simple. It is two pairs
of crossed dipoles. Each pair is spaced 1/4 wave apart and fed in phase.
One pair is physically mounted 90 degrees from the other pair. All four
dipoles are tilted 30 degtrees from vertical. One pair is fed 90 degrees
later than the other pair.
The concept is so simple and straightfoeward that it is probable that the
concept has been developed before I thought of it. But, I have been unable
to find anything published related to this simple "Double Cross Antenna"
I told my *Internet buddy*, Patrik Tast, in Finland about the concept and
he found it to be exactly what he needed for reception of NOAA weather
satellite signals. Patrik publishes alot of what I send him related to the
antenna. Patrik shows a section of his web page to describe the DCA to
anyone interested. You can find the QST article in the section Patrik
identifies as ANTENNAS on the first page of his site
http://www.poes-weather.com/index.php.

If you have any questions about the DCA concept you are free to E-mail me,
anytime. Or, if you have any facts or data to show where I am wrong about
how well this antenna performs, or know of something that performs better,
please set me straight.

Jerry KD6JDJ

Great memory, Barry! It was posted on Dec. 16, 1998. A copy of the original posting follows. I didn't do any other experiments as I said I would, and I've gotten very little confirming or contradictory feedback.

I recall you and some other folks posting some very good information about RTV, the general thrust of which was that there's a very wide range of formulations, so results might vary a lot from what I measured.

Spurred by recent comments and questions on this newsgroup, I made some inductors last weekend and measured them. Results follow.

Toroidal Inductor Measurements

Roy Lewallen, W7EL
December, 1998

Test Equipment

Inductance: GR 1606-A impedance meter. Stray series impedance was removed by initial calibration. Stray shunt capacitance was separately measured and removed mathematically. Repeatability is within about +/- 2%. No attempt was made to establish accuracy.

Q: A home-made fixture was used. This is simply an air-variable capacitor which the inductor is connected across. Coupling into and out of the fixture with signal generator and oscilloscope is done with very small capacitors. The Q is calculated from the center frequency and 3 dB bandwidth. Use of frequency counter, built-in oscilloscope voltmeter, and switchable 3 dB pad allow repeatability of about +/- 2%. Checks against a commercial Q meter show agreement within a few percent.

All measurements were made at 10 MHz.

Experiment 1: Coatings

Several identical inductors were fabricated, then coated with various compounds. Inductance and Q were measured before and after coating. The inductors were wound on Micrometals T-50-6 cores (Carbonyl SF

material, relative permeability 8.5) with 25 turns of #22 wire. This just fits on a single layer.

Ind. # Uncoated Coated Coating
L(uH) Q L(uH) Q

1 2.54 281 2.54 284 None (control)
2 2.52 286 2.54 218 Duco cement
3 2.51 267 2.52 265 Standard RTV
4 2.52 280
5 2.54 279 2.55 255 Clear hot melt glue
6 2.48 268 2.55 164 "Sealing tape"
7 2.51 283 2.51 262 Paraffin
8 2.55 262
9 2.56 281 2.59 278 GE Silicone II
10 2.50 283
11 2.51 277

Notes (by inductor number):

Unless otherwise noted, coatings covered the entire core and winding, extending more than a wire diameter beyond the outside of the wire, and the center of the core was filled.

Inductances within about 0.3 uH and Q's within less than about 5 should be considered equal.

1. Inductor Q was measured several times over several days to establish repeatability. Results were 280, 281, 283, 286, 284. (The apparent trend is interesting, but not conclusive.)
2. Devcon Duco(R) Cement, allowed to dry for 24 hours. Although a generous coating was applied, the dried coating was less than a wire diameter in thickness, and the center of the core wasn't filled.
3. Dap Dow Corning 100% Silicone Sealant, Clear, allowed to cure for 24 hours. This is standard acetic-acid (vinegar) curing RTV.
5. Stanley All Purpose GlueSticks, claimed set time 25-30 seconds. These are nearly clear, translucent white, and not tan or brown colored.
6. This was some stuff I got surplus. It's a black, sticky, rubbery compound something like Coax Seal, but may be of entirely different composition. It's in the form of a thick tape. It's soluble in naphtha (and the solution dyes everything black it gets on), but acetone doesn't touch it.
7. Household canning paraffin. (I don't know what it's called in Britain, but I'm not referring to the liquid -- kerosene to us -- you call paraffin. This is a common wax made from petroleum.)
9. GE Silicone II Household Glue & Seal, Clear. This is a non-acetic-acid curing RTV. Allowed to cure for two days. Still just a little soft even after this much curing.
11. This is the same core as #6. After the coated #6 was measured, the core was cleaned, the winding cut off, the core further cleaned, then a new winding put on.

Comments:

I had made some measurements years ago, but couldn't locate the results. I recall that standard RTV was poor (lowered Q noticeably) but that an industrial non-acetic-acid curing RTV was good. The results with standard RTV in this test were striking. Either a) the formulation of standard RTV has changed over the years, b) there are major differences among brands, or c) my memory is faulty.

I recall from my earlier tests that epoxy was quite poor, but this has to be qualified after the experience with RTV. There's a huge number of different types of epoxy, and some may be much worse than others. I might test some in the future, but didn't during this test.

I intend to test Q-dope in the future, but didn't have any on hand.

Conclusions:

Of the materials tested, both types of RTV stand out as having a negligible effect on inductor Q. Hot melt glue and paraffin have a small enough effect that they should be tolerable for many applications. Duco cement seriously degrades Q, even in a much thinner layer than the other coatings. The "sealing tape", tested out of curiosity, shows just how great a degradation can be caused by a poor coating.

None of the coatings made much of a change in apparent inductance. This implies that the reduction in Q is due primarily to dielectric loss rather than simple increase in capacitance due to the material's dielectric constant.

Note the difference in inductance and Q between inductors 6 and 11, which were wound on the same core. Apparently physical differences in the windings (perhaps such as tightness and conformance to the core, or uniformity of turn spacing) are a major contributor to differences between inductors. All the cores used in the test were ordered at the same time, so they may have come from the same batch and have relatively little variation. On the basis of just the comparison between numbers 6 and 11, it's entirely possible that most of the variation between inductors in this experiment is due to winding differences. The variation might be less if smaller wire with less stiffness is used.

Experiment 2: Turn Spacing

I believe it's well established that even a partial second layer can greatly reduce the Q of a toroidal inductor. But I had recently heard that optimum Q is achieved when the first layer isn't quite full, but rather has about a 30 degree gap in the winding, to reduce the capacitance between winding ends. To test this, I wound 23 turns of #22 wire on a T-50-6 core, and measured the Q with the turns pushed close together to make a gap (of about 30 degrees), and then spread to evenly distribute the turns completely around the core. Measured 10 MHz Q's were 272 and 284, respectively. (Inductances were 2.21 and

2.11 uH.) This one test doesn't by any means exhaust all the possibilities of core geometries, permeabilities, number of turns, and wire size, all of which may play a role. But if there's any advantage to leaving a gap, I believe it would be a small one. And in at least one case, it's slightly better not to.

Another test was run using 10 turns of the same size wire on the same core. With the turns pushed together (the winding covering less than half the core), Q was 213, L was 841 nH. With the turns spread evenly around the core, Q was 209 but the L had dropped to 505 nH. I reasoned that a more fair comparison would be with a winding of about the same inductance as the original close-spaced one. This required 15 turns when distributed around the core, and resulted in a Q of 257 and L of 924 uH. Here again, the Q is best when the turns are evenly distributed. Note that type 6 powdered iron has a very low relative permeability (8.5), so results might be different with higher-permeability materials. However, this is the material I usually use for high-Q inductors at HF, so I'm most interested in how it's affected.

Experiment 3: "Regressive" Winding

In the past, I've found what I thought was a moderate improvement in Q by "regressively" winding an inductor. To do this, you wind half the turns in the normal manner. Then you pass the wire through the hole, but to the opposite side of the inductor (with it ending up beside the first turn), then completing the winding from the vicinity of the first turn back toward the origination of the crossover. The result is an inductor with the two leads coming from points directly opposite each other. Stray capacitance is allegedly reduced by keeping the ends of the winding apart. An inductor wound in this manner with 25 turns of #22 wire measured Q = 285, L = 2.48 uH. This Q is on the high side, and the L on the low side, of the uncoated inductors measured in Experiment 1. I didn't try comparing with a standard winding on the same core, since the same number of turns wound on the same core at different times (e.g., inductors 6 and 11 in Experiment 1) were shown to come out differently from each other. My conclusion is that any Q improvement due to "regressive" winding is slight. Another claim for "regressive" winding is that it eliminates the "single turn" effect of toroidal inductors. A normal toroid will couple into its surroundings as though it consists of a single turn the size of the core. In the "regressively" wound inductor, there are two half-turns in opposite directions, so coupling should be reduced. I haven't tested this in any way, but it may be an argument in favor of the method. The relatively long wire of the crossover turn would contribute to coupling, however.

I'll undertake more experiments and measurements as time permits. I'd love to hear from anyone who has made either supporting or contradictory quantitative measurements.

Roy Lewallen, W7EL

... but surely this is the same as a Lindenblad array? The tilt of the dipoles was always a parameter in the Lindenblad, so I wonder how your DCA differs from what N. E. Lindenblad described in the April 1941 edition of 'Communications'.

Are you about done spamming this stuff? Can we please get back to the
discussions that these news groups were designed for? Please?

Chris,
I would think that the primary reason is the complexity of the thing
and the small size. I can't even see some of the parts, how could I
possibly modify them?
- 'Doc

Hi Chris

Several, well educated, antenna experts insist that the DCA is actually a Lindenblad. If you thought the DCA is a Lindenblad, you are not alone. The DCA is not a Lindenblad. The array of four dipoles in a Lindenblad are fed to produce an overhead null. The four dipoles in a DCA are fed to produce no overhead null. The DCA is a hemispheric coverage CP antenna. The Lindenblad is not.
Let me know if you have reason to consider the DCA to be the same as a Lindenblad. I knew nothing about Lindenblad until after recognizing the DCA concept.

Beware of the Aluminum foil and shields though. Once it gets wet there is no stopping the internal corrosion and will generate broadband noise under power. This includes both RG6 and 9913 and LMR types. They have been banned from all commercial sites around here.

Bring a knife with you and inspect before you buy. Tinned Copper braid is better, Silver clad rigid is best.

I seem to recall reading that Styrene had the best dielectric properties of the plastics.

I did some similar experiments building 1/4 wave spikes in a BNC connector for 2m HTs and found that glues would heat up from the RF. Clear epoxy worked best and JB weld, Pipe dope, Silicone sealers and Hot glue were poor performers. I still have some fiberglass tape that I use for torroids.

Looked at the URL
What this antenna is doing is to aproach equilibrium by taking into
account the "weak force" which demands a tilting away from parallelism
or the verticle position away from the surface of the earth, without
which the radiation pattern will not be balanced.
When a U.S.naval base tipped all its verticle antennas at an angle
referenced to earth this prior null must have been of great
inconvenience with respect to defense alertness.

Perhaps it's a rather fine distinction to say an antenna that has the same physical form as the Lindenblad array is something different because the elements are driven differently. The original version that he patented didn't have rod elements at all (see, for example, www.coe.montana.edu/ee/rwolff/EE548/EE548-S06/UWB/History_UWB_antennas.pdf) but it was the configuration of four slanted dipoles around a central pole that appears to have borne his name since 1941. Henry Jasik's 'Antenna Engineering Handbook' (now by John L. Volakis, Richard C. Johnson and Henry Jasik, Chapter 29, Page 34) refers to the configuration as a Lindenblad array, without being specific about the way the dipoles are driven. However, applying new names to antennas that exploit well known configurations seems fairly commonplace in the professional field,

particularly in broadcasting.

Of course you can name your antenna as you please, but there might be some value in mentioning that it is a development of the Lindenblad array - you'd certainly need to demonstrate awareness of, and distinction from, the prior art if you were to seek a patent.

Chris

Looked at the URL
What this antenna is doing is to aproach equilibrium by taking into
account the "weak force" which demands a tilting away from parallelism
or the verticle position away from the surface of the earth, without
which the radiation pattern will not be balanced.
When a U.S.naval base tipped all its verticle antennas at an angle
referenced to earth this prior null must have been of great
inconvenience with respect to defense alertness.

- - - -

A simpler explanation is that the tilt is there to provide a
horizontally-polarised component in the radiated field around the antenna,
as well as a vertically-polarised component, in order to achieve circular
polarisation. The angle of tilt is a design parameter which, along with the
radius of the centres of the dipoles and, in this case, the choice of how
they are phased, collectively determine the axial ratio. The radiation
patterns and match of such an antenna are not affected by its orientation
with respect to the surface of the earth!

Chris

I suppose in English that means "No".

Most of have no need of a reminder, thanks. Maybe you feel the need to remind others, and now that you have done so please refrain from further spam.

Ron

Of common plastics, Teflon, polyethylene, styrene, and polypropylene
have the lowest RF loss. However, others can be perfectly adequate for
some applications.

Actually made good working ladder line from bell wire from the Science dept.
and plastic spoons from the lunchroom for the school radio club station.
The ugliest, goofiest looking projects always seem to work the best.

980. Coaxial Collinear... To short or not to short

Newsgroup: rec.radio.amateur.antenna

From: xray66@earthlink.net
Message-ID: <2dd1021d-1d9f-4675-9ed8-2b3e9b905ad0@q30g2000prq.googlegroups.com>
Source record: 17604

I've seen plans for coax collinear designs where the top 1/4 wave element is shorted back down onto the below element, and I've also seen plans where the 1/4 wave top element just comes straight up and they didn't put a jumper across to the other element to short it. I'm wondering, has anyone experimented with both methods and noticed any significant difference? Is there a best way? Also, does the shorted method make it DC grounded?

Thanks for any info,

Hi Chris

I wonder if you have any pictures of a Lindenblad and any radiation plots.
I also wonder if an end fire antenna is the same as a broadside antenna when
they look the same from a distance.

You you feel that you are the one, the best qualified, to provide these
"reminders"?

With the sad state of your command of the English language I'd suspect
any claim that you generated an FCC action.

Kindly allow the individual to whom I posted the original "post" to
answer. If he can that is. Somehow I doubt that anything beyond spam
is a reach for him.

Ron

Thanks Roy, but reading your article, I have concluded that my memory is somewhat faulty. I had thought that cellulose nitrate had low dielectric losses, but it turns out that what I was really thinking of was clear fingernail polish which is made from a mixture of cellulose acetate, cellulose acetate propionate, and cellulose acetate butyrate. These cellulose esters are still not excellent radio frequency insulators, but they do a better job than cellulose nitrate.

I have recently been working on an introductory paper for electrical engineers on the mechanical and electrical properties of polymeric plastics. The following paragraph from the paper explains the basis for a polymer's electric properties.

"The electrical properties of a polymer are due to the structure of the polymer both microscopically and macroscopically. Most polymers are dielectrics (insulators) as opposed to metals where electrons can move freely. In polymers, the electrons are tightly bound to the polymer backbone through covalent bonding which resists the movement of electrons. Not all polymers behave the same when an electric potential is applied to them. This difference in behavior allows plastics to be classified as polar or non-polar. Polar plastics do not have fully covalent bonds leading to a slight imbalance in the electrical charge of the molecule. In polar plastics, dipoles are created by an imbalance in the distribution of electrons and in the presence of an electric field these dipoles will attempt to move slightly to align with the field. Because of the temporal element of the movement of the dipoles, the frequency of the applied field strongly affects the motion of the dipoles. In non-polar plastics, the molecules are symmetric and the bonds are fully covalent. No dipoles are present to align with the electrical field. However the electric field does move the electrons slightly in the direction of the applied field; this is known as electron polarization. This movement is effectively instantaneous and the effect of frequency on the dielectric properties of

non-polar plastics is quite small. Non-polar plastics tend to be excellent insulators and have low dielectric constants and low dielectric losses making them useful for the dielectrics in capacitors. Polar plastics, at low frequencies, have enough time for the dipoles to align with the external field. At higher frequencies, the dipoles do not have enough time to fully align. The result is a decrease in the dielectric constant with frequency. The hindrance to the movement to the dipoles, a form of internal friction, causes heat to build up in the polymer. This increased dielectric loss is the operating principle behind radio frequency heating and microwave ovens."

From their atomic structure polyethylene [PE], polytetrafluoroethylene [PTFE, Teflon], and polystyrene [PS] are nonpolar plastics with low dielectric constants of 2.3, 2.1, and 2.6 respectively. Of these, only PS readily dissolve in solvents.

The repeating unit of cellulose, a natural polymer, has three hydroxyl groups which may be substituted with inorganic or organic acids. When nitric acid is used, cellulose nitrate is produced. Cellulose trinitrate, the explosive, has three nitrate groups per repeating unit. The ester used in lacquers and Duco cement is not fully nitrated with a degree of substitution between 2 and 3. Because of the nitro groups, which are quite polar, cellulose nitrate has higher dielectric losses than the esters made with organic acids. These esters are much more lossy than true nonpolar polymers, but less lossy than very polar plastics like polyvinyl chloride [PVC].

So for a coil dope with low dielectric losses, I suggest polystyrene dissolved in acetone or toluene. Clear nail polish will work in a pinch, but it might be better to use hot melt adhesive, or paraffin wax. If you can wait a day or more for it to cure, some of the room temperature vulcanizing silicone products work well too.

>>
>>
>> Perhaps it's a rather fine distinction to say an antenna that has the
>> same physical form as the Lindenblad array is something different because
>> the elements are driven differently. The original version that he
>> patented didn't have rod elements at all (see, for example,

>> www.coe.montana.edu/ee/rwolff/EE548/EE548-S06/UWB/History_UWB_antennas.pdf
>>) but it was the configuration of four slanted dipoles around a central
>> pole that appears to have borne his name since 1941. Henry Jasik's
>> 'Antenna Engineering Handbook' (now by John L. Volakis, Richard C.
>> Johnson and Henry Jasik, Chapter 29, Page 34) refers to the configuration
>> as a Lindenblad array, without being specific about the way the dipoles
>> are driven. However, applying new names to antennas that exploit well
>> known configurations seems fairly commonplace in the professional field,
>> particularly in broadcasting.
>>
>> Of course you can name your antenna as you please, but there might be
>> some value in mentioning that it is a development of the Lindenblad
>> array - you'd certainly need to demonstrate awareness of, and distinction
>> from, the prior art if you were to seek a patent.
>>
>> Chris
